THE RUGER® LCR®
DOUBLE-ACTION REVOLVER:
ELEVEN MODELS / SIX CALIBERS

Only one thing matters when it matters MOST.

THE BEST DOUBLE-ACTION REVOLVER TRIGGER PULL IN THE WORLD.

We believe the Ruger® LCR® has the best factory double-action trigger pull of any small-frame revolver on this planet. We challenge you to try it for yourself. The non-stacking trigger pull on every award-winning LCR® is light, smooth and manageable, making the LCR® a lightweight, compact revolver you can rely on when it matters most.

Dillon’s RF 100 Automatic Primer Filler

Eliminates the need for primer pick-up tubes!
Fills the primer tube while you reload!
Clear polycarbonate shield and protective housing

Dillon’s RF 100 Automatic Primer Filler eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run!

In about two minutes the primers are inside the protective metal housing. That’s about 30 rounds you can load while the RF 100 is doing your work for you!

The RF 100 is available for either large or small primers, and conversion kits are available at one low price of $47.95 each.

What’s better than one RL 550B? Answer: Two or more 550Bs! I have FOUR. Two are dedicated to favorite calibers, the others for other reloading projects. If one goes down, the others serve until repairs are made. I have been a Dillon RL 550B Believer for 25 years. By the way, I have two XL 650s as well.

Bill Ferguson – Waterville, OH
Holy smake, Bill! And here I thought I was THE true RL 550B zealot! I only have two myself – one set up for large primers and one for small. Looks like I have some catching up to do!

With over 30 years Law Enforcement active duty on the street, with SWAT, Narcotics, Traffic, and Certified NRA Firearms Instructor training behind me, and four years military before that, I still teach the same skillset. I am in the Philippines, teaching these skills to the PNP (Philippine National Police), some of the military, and a lot of college kids getting ready to go into either the military or the PNP.

I have been an avid reloader since the late 70s, moving up from the single-stage RCBS Rock Chucker, to the top of the line in my opinion: the Dillon RL 550B. When a part wore out, or I had a problem, a call to Dillon sent the part needed to my door – no charge! Now that’s service! I wasn’t able to bring my reloading equipment with me, so I do miss it and the fun of running off some rounds to go plinking with.

Paul Martin – pmartindse@yahoo.com

Thank you for shipping my recent order so promptly. I appreciate it. I’ve not received the last few issues of The Blue Press so I decided I had better place an order soon or I may be taken off the mailing list. I’ve saved nearly each issue at least since John Marshall started his articles on Classic Firearms. Each issue contains so much valuable information and entertaining writing.

SQUARE DEAL ‘B’ ACCESSORIES
Reviewed by Peter Caroline

A couple of years ago, my neighbor and shooting buddy, Jim, bought a gun that, at the time, I thought was the solution to a non-existent problem. It was an AK pistol, chambered for .223. I’ll admit, I’m no great fan of the cartridge or the AK. Using the standard AK sights, shooting it with any degree of accuracy was a chore. Jim fitted this contraption with a green laser, and achieved some success in popping rocks and golf balls from the hip. To each his own, I guess.

Recently, I was asked to review a new AR-format pistol that now seems to make a great deal of sense. The CMMG Mk4 PDW Pistol is available chambered for .300 AAC Blackout. This is, to me at least, a very interesting cartridge. Based on the .223 Remington case, it has pretty much the same ballistics as the 7.62x39. It will, however, work with existing .223/5.56x45 magazines, operate equally well with both supersonic and subsonic loads, enable sound-suppressed fire and keep recoil down to comfortable levels, even in a short-barreled pistol configuration. Accuracy, as I was to discover, would be at least equal to that of .223 in the conventional AR platform.

My initial outing with the Mk4 PDW pistol was primarily a function test. I had fitted the pistol with a Bushnell TRS-25 red dot sight on a 3/4” riser block, and brought along a box of Remington 120-grain OTFB supersonic ammo. Holding the gun, pistol-fashion, out in front of me seemed a bit worrisome. Even considering the moderate recoil, I was not comfortable with the prospect of the buffer tube coming straight back at my face. I tried resting the tube against my cheek. That was somewhat better, but not really comfortable. I reported this situation to my editor, Mark Pixler, and he suggested that I contact the people at Thordsen Customs. They make a cheek rest, an enhanced buffer tube cover, which allows you to comfortably support an AR pistol, while fully complying with the BATFE regulations. This is a cheek rest, NOT a shoulder stock, and it works like a charm! It even includes dual sling sockets and a couple of tubular accessory compartments that could hold spare batteries, extra cartridges or small Tootsie Rolls (energy rations).

With the Thordsen cheek rest fitted (maybe a three-minute procedure), I went back to the range with the abovementioned Remington 120-grain OTFB, plus Remington 220-grain OTM subsonic, HPR 110-grain FMJ and Hornady 208-grain AMAX subsonic. From the bench, at 25 yards, the red dot pretty much obscures the X-ring, but I was still able to get 5-round groups that you could cover with a nickel. Trigger pull is typical Mil-Spec, right
around 6 lbs., but the results speak for themselves.

Now, you might well ask, what is the purpose of a 5.3-lb., .300 BLK pistol? Well, we live in interesting times. It is not insignificant that I’m writing this on September 11, a date that forever changed our perception of our personal and community safety.

For many years, I have carried a concealed handgun, and regarded that choice as quite adequate for just about any situation I might encounter. Nowadays, things are different. The turmoil of the Middle East has been imported to our shores, and jihadists and their copycats have made their presence known in Mayberry, along with individuals on or off their psychotropic medications. I’m well aware that these instances are not common; they make the headlines because they are uncommon. But if you are there when the proverbial article hits the fan, the singularity of the event does not matter; your survival does.

The playing field has indeed changed. In the Garland, Texas, “Draw Mohammed” conflict, a well-trained officer with a GLOCK 21 was able to take out two lowlifes armed with AKs. His success was a testimonial to his skill and grit. Could you, under the same circumstances, duplicate that feat? Do you feel lucky? Today’s circumstances might well call for something easily portable, with considerably more capacity and stopping power. You want to be adequately prepared, but you don’t want to create a public spectacle. A backpack or squash racket case will very handily conceal the Mk4 PDW Pistol plus a few extra 30-round magazines. Be careful out there, and be prepared.

CMMG Mk4 PDW Specs:
- Barrel: 8.0”, 1:7 twist
- Muzzle: A2 Compensator, threaded 5/8-24
- Hand guard: CMMG RKM7 Keymod
- Furniture: MAGPUL MOE pistol grip and MOE trigger guard
- Trigger: Single-stage MIL-SPEC type
- Weight: 5.3 lbs. (unloaded)
- Length: 25”
- MSRP: $999.95

Dillon's RL 550B has long worn the title of “The World's Most Versatile Progressive Reloader,” and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles.

The BL 550 is essentially an RL 550B without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550B – it uses any manufacturer's standard 7/8” x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it’s fully upgradeable to Dillon’s Progressive RL 550B loader!

The interchangeable toolhead (Page 15) makes it quick, easy and inexpensive to change calibers. For example, if you load .30-06 for elk, .243 for deer and .22-250 for coyotes, you don’t even have to change the shellplate. You simply pull two pins and swap the toolhead with your .30-06 dies to another toolhead with your .22-250 or .243 dies in less than 30 seconds! The additional toolheads are $22.95 each, or $20.95 each if you buy three or more – if you load for several rifles it’s a no-brainer! Once you get your dies adjusted, you’ll never have to re-set them.

A powder measure adapter (bottom right photo) is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it’s easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

L66-20251, $87.95

OPTIONAL MAGNUM RIFLE POWDER BAR
L66-21353, $29.95

AUTO EJECT SYSTEM
Greatly increases your ammo production capabilities and adds a Cartridge Chute/Bracket and a Cartridge Bin to your reloader.
L66-22120, $30.95

AT 500 POWDER DIE
Extra powder dies allow you to move your powder measure from toolhead to toolhead without changing the “belling” adjustment.
Powder Die: L66-16629, $19.95
Oversize Die: L66-16626, $19.95
Plastic Funnel: L66-16617, $5.95

POWDER MEASURE ADAPTER
If you load rifle cartridges with long-grain extruded powder, you can now use any manufacturer’s powder measure with 7/8” x 14 threads on your RL 450, AT 500, BL 550 or RL 550B. (Requires the use of an RL 450 powder die – see below.)
L66-20029, $22.95
RL 450 Powder Die: L66-20308, $21.95

800-223-4570 or 480-948-8009 • FAX 480-998-2786 • 24-Hour On-Line Ordering @ www.bluepress.com
STANDARD FEATURES:
• Accommodates Over 160 Calibers
• Uses Standard 7/8” x 14 Dies
• Loading Rate: 500-600 Rds./Hr.
• Comes With One Caliber Conversion
• Interchangeable Toolhead Assembly
• Automatic Powder Measure
• Automatic Primer System
• Lifetime “No-B.S.” Warranty
• RISK FREE 30-Day Trial Period!

All for ONLY...

$439 95*
### A. RL 550B CALIBER CONVERSION KITS
- Contains: Shellplate, powder funnel and locator buttons. Available in all calibers; please specify caliber desired.
- L66-RL550B CONVERSION $45.95 (Exotic calibers, $55.95)

### B. AUTO POWDER MEASURE SYSTEMS
- Additional powder measures stay on the toolhead. Never change powder measurements again!
- RL 550 Powder Measure L66-20782, $76.95 ea.
- Magnum Rifle Powder Bar L66-21353, $29.95 each
- X-Small Powder Bar L66-20780, $29.95 each

### C. DELUXE QUICK CHANGE ASSEMBLY
- With a quick change assembly and a caliber conversion kit (SOLD SEPARATELY), you can convert in less than a minute. Complete with:
  - Toolhead
  - Powder Measure
  - Powder Die
  - Toolhead Stand
- Price without Dies, L66-22058, $103.95
- Loading dies sold separately on Pages 34, 35 & 52.

### D. POWDER DIES
- Extra powder dies allow you to move your powder measure from toolhead to toolhead without changing the “belling” adjustment.
- L66-20064, $11.35 each
- Three or more, $10.25 ea.
- X-Large Powder Die, L66-21253, $19.95 each

### E. TOOLHEADS
- Don’t adjust dies when switching calibers. These precision tool holders hold your dies in perfect alignment, making caliber changes quick and easy.
- L66-13909, $22.95 each
- Three or more, $20.95 ea.

### F. TOOLHEAD STANDS
- The ultimate in convenience for keeping your reloading bench clean and uncluttered.
- L66-22055, $20.95 each
- Three or more, $18.95 ea.

### G. 1” BENCH WRENCH
- L66-10842, $7.95 each
- Two or more, $7.10 ea.

### H. RL 550B CASEFEEDER UPGRADE
- Available for most pistol cartridges – will not work with rifle cartridges.
- Large Pistol L66-14450
  - Small Pistol L66-14451
  - $264.95 (110v US Model)
- Large Pistol L66-14453
  - Small Pistol L66-14454
  - $274.95 (220v Euro Model)
- CASEFEEDER CALIBER CONVERSIONS (Page 17)

### I. PRIMER FLIP TRAY
- L66-13606, $20.95 each

### J. PRIMER PICKUP TUBES
- 1 Lg. tube L66-22029 $7.99
- 1 Sm. tube L66-22028 7.99
- 2 Sm., 2 Lg. L66-20056 23.95
- 4 Lg. tubes L66-20050 23.95
- 4 Sm. tubes L66-20049 23.95

### K. 550 SPARE PARTS KIT
- 1 Seating Punch, Small
- 1 #10 Timmerman Insert
- 1 Primer Cup, Large
- 1 Primer Cup, Small
- 1 Bellcrank Cube
- 1 3/8” Index Ball
- 1 550 Brass Tip Set Screw
- 1 550 Ejector Wire
- 1 Cartridge Retaining Spring
- 1 550 Slide Return Spring
- 4 Locator Pins (#1, #2, #3, #4)
- 1 Seating Punch, Large
- 1 550 Index Ball Spring
- 2 Pickup Tube, Small, Yellow Tips
- 2 Magazine Orifices, Large
- 1 Toolhead Pin
- L66-20048, $18.95

### L. MACHINE MAINTENANCE KIT
- Provides you with everything you need to keep your Dillon loader cleaned and lubricated up to factory specifications. Available in combination with a spare parts kit for your machine.

### M. LOW POWDER SENSOR
- Provides an audible and visual reminder when it’s time to refill your powder reservoir. When the powder level drops to about 1000 grains, a buzzer will sound and a bright red LED will light.
- L66-16306, $41.95

### N. EQUIPMENT DUST COVERS
- This packcloth nylon machine cover comes equipped with a D-ring, allowing the heavy duty zipper to be locked.
- RL 550B Cover, L66-13795, $23.95
- (O.) Master lock, L66-13083, $3.95
- Quick-Change Cover (for use with powder measure) L66-11143, $14.95

### P. UNIVERSAL MOUNTING HARDWARE KIT
- Includes: 4-Grade 5 Hex Bolts, 4-Lock Nuts, 4 Flat Washers, 4-Fender Washers, 2-Wood Screws.
- L66-14355, $5.49

** Dillon's Strong Mounts** increase your machine’s “footprint” to over 10”, spreading the load over the whole bench instead of stressing the leading edge. For XL 650 owners with limited overhead clearance, the XL 650-only mount raises the machine 6” above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

** Dillon's Reloading Accessories**

** Dillon's Low Powder Sensor** provides an audible and visual reminder when it’s time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

| L66-197126 | $142.95 |

** Dillon’s Reloading Accessories**

** Dillon's “Belted Magnum” Powder System** features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

| Magnum Powder System | L66-97126 | $142.95 |

** Dillon’s Upgrade Components**

** Dillon’s Toolholders** are available for your RL 550B, XL 650, SL 900, and Square Deal B, and ensure that the tools you need to service your reloader are handy and organized. No more digging around your bench trying to find the right size hex wrench!

</table>

### Overall Length Gauge

The initial distance a bullet must travel when fired (from the cartridge case mouth until it engages the rifling) is absolutely critical to achieving peak accuracy.

### Bullet Comparator

Correct bullet seating depth is critical to accuracy. In addition, minor variations in bullet seating depth will have an effect on both pressure and velocity.

### Open 7-6 MST, M-F; 8-3 Sat. • VISA, MasterCard, Discover, C.O.D. • Shipping and HazMat Not Included
CV-2001 – The Industry Standard
Dillon’s CV-2001 Vibratory Case Cleaner is the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour.

Not only is our capacity greater, but our motor is larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no “hobby” machine!

The bowl and base are constructed of 7/32” thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators
After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media.

We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners.

The solution was an injection molded reversible part. Simple, and it works great. Our device is large, 10” x 14”, and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18” x 22”. The tub keeps the mess off the floor and bench.

It’s fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?
Dillon’s introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit.

CM-2000 Case/Media Separator  L66-20675  $75.95
CM-500 Case/Media Separator  L66-21045  $47.95

Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Attention European Customers:
Case Cleaners are available in 220 volt!
Euro CV-2001  L66-22047  $213.95
Euro CV-750  L66-19473  $169.95

All Dillon CV-2001 and CV-750 Vibratory Case Cleaners have a One-Year Warranty on the electric motor.
Rapid Polish 290

SHINE? You bet your brass! Dillon Precision has developed another exciting new product to make your reloading faster and easier. Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You’ll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won’t weaken brass cases!

Rapid Polish 290

8 oz. bottle. L66-13804 $8.95
Case (20 pc.) L66-20255 135.95

Don’t Forget Polishing Media!

Crushed walnut hull polishing media – quickly cleans even the dirtiest of cases. 15-pound bag L66-13287 $23.95

Ground corn cob polishing media – the best there is for that final polish. 10-pound bag L66-13496 $15.95

Dillon Case Lube

Rapid Lube 5000, Dillon’s aerosol cartridge case lubricant, has been replaced by an “environmentally correct,” non-aerosol case lube. It works the same: Simply lay your cases out, spray lightly with one or two passes and you’ve done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge cases and you’re ready to load. Try a bottle. You’ll never use a grease pad again.

D.C.L. Dillon Case Lubricant

8 oz. bottle. L66-13733 $8.95
Case (20 pc.) L66-20256 135.95

Half and Half 10 bottles of polish /10 of lube
Case (20 pc.) L66-21375 $135.95

Super 1050/RL 1050 Short Trim Die Toolhead

For short rifle cartridges like the .300 Blackout, you must use a Short Trim Die Toolhead when using a Dillon Rapid Trim 1500 Case Trimmer during case preparation. Otherwise, the toolhead is too thick to facilitate the correct case length. This specialty toolhead enables you to correctly trim and prepare short rifle cases on your 1050. (NOTE: the 1050 toolhead stand is not included.)
Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won’t be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works.

What’s more, it’s inexpensive. The Super Swage 600 comes with large and small swage rods.

When we lost our supplier for Dillon Leather, we considered abandoning the gunleather business. Fortunately, we were able to team up with Mitch Rosen Extraordinary Gunleather to continue to offer a best-quality, made-in-the-USA line of belts and holsters. We know you'll like these products — we're happy to have our name on them.
El Raton-DL $50

This pocket holster secures and properly positions a J-Frame revolver in your pocket. Will not come out when you draw.

2” J-Frame S&W Revolver

Sport EXP-DL $98

The Sport™ holster is a straight-drop design featuring a tunnel loop and rear stabilizing slot. This is an all-around holster suited to field use, “practical” competition, and some prefer it for daily carry. Slim profile, straight drop, close to the body.

Dillon’s NEW Concealed Carry Tote accommodates all the tools you need to survive the urban jungle. This low-profile carry case looks like an ordinary briefcase or laptop case, but it’s designed for your pistol as well as your PC! It’s made of rugged nylon fabric, with heavy-duty zippers on all compartments. The main compartment is 15” x 11.5” x 3” deep, with pouches in back and front. The hidden gun pocket is held closed with hook & loop fasteners for quick access, has a 14.5” opening and is 10.5” deep. The two front pockets are 6.5” x 8” x 1.5” and feature inner pockets for flat items. There is also a zippered compartment on the back of the case sized to accommodate a ballistic armor plate.

Mernickle Holsters’ Conceal-Carry Performance Series

If Cowboy Action Shooting is your game, why not CARRY the gun you shoot the most? These holsters can be worn strong side, appendix carry or cross draw and are fully molded. Now also available for J-Frame S&Ws.

- 4-3/4” SA Colts/clones L66-11560
- 4-5/8” Ruger Blackhawk L66-15765
- Ruger LCR L66-29030
- 2” J-Frame S&W Rev. L66-15746

“Wild Bunch” 1911 Holster/Mag Pouch

This holster/mag pouch combination was designed specifically for the Single Action Shooting Society’s “Wild Bunch” category of Cowboy Action Shooting, incorporating a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The holster is hard molded so as not to lose its shape even after thousands of draws. It spaces the pistol’s grip frame away from your body so you’ll get a full combat grip, and the holster includes the T-nut lock system to ensure that it stays in place during a draw.

The mag pouch spaces the magazines so when you grab one mag, the second isn’t in your way; above the belt line so the belt doesn’t interfere with the draw; and at the max depth required by the sport – and no more – so you’ll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

1911 Holster L66-19947 $139.95
Mag Pouch L66-19946 44.95

UM Tactical has created a universal sight mount that will fit all pistols with a 1913 Picatinny rail. Although many sight mounts exist; what makes the unit produced by UM Tactical unique, is that it will mount and dismount from your firearm in under 30 seconds with no tools or gunsmithing. Once set up with your favorite scope or red dot sight, the mount and optic can be taken on and off your firearm and still hold the zero. This high quality mount is constructed from CNC machined aluminum and is finished in Mil-Spec Type III anodizing.

UM Tactical’s UM3 Universal Holster attaches to the UM3 sight mount and not your handgun. This unique design is hand made and is constructed of thermoformed plastic (Boltron).

The Wilderness Tactical Products

order to better support holsters, magazine pouches and other gear. This belt is a favorite with law enforcement, military personnel, firefighters, paramedics, etc. Note: The 1.75" belt works best with BDUs or jeans. The 1.5" belt features a scaled-down buckle.

“Revolution” Holster Series

Blade-Tech used its extensive knowledge of Kydex® holstermaking to bring you the Revolution line of holsters. Using a proprietary blend of polymers, Blade-Tech has engineered these holsters to offer lifetime performance in a wide range of conditions. The holsters won’t become soft in extreme temperatures (over 300º F) and won’t become fragile in low temperatures.

Dillon's Pistol Die Sets

Size Die
• Floating Decap Assembly Eliminates Primer “Draw Back”
• Long, Tapered Carbide Ring
• Radiused Opening Makes Progressive Loading Smoother

Sizing/Depriming Die
Our sizing/depriming dies feature a unique “floating decap assembly” with a snap spring that throws the spent primer off the pin and eliminates the problem of primer “draw back” that often occurs when decapping military brass. The primary feature of Dillon’s size die design – the long, tapered carbide ring with a radiused opening – remains unchanged.

That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that’s still only a part of the story.

Crimp Die
• Quick Disassembly, Easy to Clean

Crimping Die
We’ve made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you’ll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

Seat Die
• Reversible Seating Stem Makes it Easy to Change Bullet Styles

Bullet Seating Die
We’ve incorporated a “flip-flop” seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem out of the die body. We’ve always included both types of seating stems, but the new double-ended design makes it a simple matter to remove a pin, reverse the seating stem, and make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time it used to take.

NOTE: All Dillon Pistol Die sets include our sizer/decap die, seat die and a separate crimp die. (Taper crimp for autos; accu-crimp for revolvers.)

Dillon’s Rifle Die Sets

Dillon Three-Die Rifle Die Sets include a sizing/depriming die, a bullet seating die and a taper crimp die. Dillon Two-Die Rifle Die Sets include a sizing/depriming die and a seat/crimp die.

**Sizing/Depriming Die**

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for “squeak-free,” effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

**Bullet Seating Die**

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

**Taper Crimp Die**

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today’s marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

**Size Die**

- Full-length, to minimum tolerance
- Carbide expander ball
- Features stuck case remover

**Seat Die**

- Designed to hold bullet straight throughout the seating process

**Taper Crimp Die**

- Centers case neck and body for a more uniform crimp

By Duane Thomas

MAGPUL is a well-known maker of polymer magazines for AR-15s and a variety of other platforms. Recently they turned their attention to GLOCK magazines, beginning with the GLOCK 17, and with GLOCK 19 mags upcoming. This is a tough proposition since factory GLOCK magazines are extremely functional, in the overall scheme of things not terribly expensive, and damn near indestructible. In order to succeed in offering aftermarket magazines for GLOCKS, MAGPUL would have to either (1) offer features the standard GLOCK magazine does not while retaining its positive qualities, or (2) seriously undercut GLOCK on price. Ideally both. Let’s see how they did.

For purposes of simplicity, I will henceforth refer to the factory GLOCK unit as “the GLOCK magazine/mag” although arguably the MAGPUL unit is also a GLOCK magazine. MAGPUL calls their magazine the PMAG 17 GL9; we will call it the PMAG. The PMAG is, as you would expect, made completely of polymer, versus the GLOCK magazine that wraps polymer around a metal liner. The GLOCK magazine has a black follower, the PMAG has an orange follower. Thus far, not much to prefer.

My first impression when opening up the package inside which was included my sample PMAG from MAGPUL, and holding the PMAG in my hand, was of the stiffness of its construction. The stock GLOCK mag, even though it doesn’t actually depress under the fingertips, has always to me had a somewhat “soft” feeling, like the material of the plastic sleeve was giving, almost-but-not-quite-imperceptibly, under my fingers. There is none of that with the PMAG, this is some stiff plastic. The second impression, looking down inside the mag tube, was that with one solid piece of plastic taking up the space that would, in a normal GLOCK magazine, contain a plastic sleeve and an interior metal box, the plastic on the PMAG is a lot thicker than on a GLOCK magazine.

Hefting the two magazines, one after the other, in my hand, the PMAG is obviously the lighter of the two. This is a small difference, you won’t even notice it when actually carrying a couple of these things in a spare magazine pouch, but it’s there. The PMAG is slightly longer than a GLOCK magazine. Again, not enough to really make a difference, I mention it only in the interest of completeness.

GLOCK magazines are famously difficult to disassemble for cleaning. In order to remove the floorplate, you must first push the subfloorplate down inside the mag tube, in front of the spring, using some sort of long, narrow...
rod (I typically use a narrow bit from my Brownells Magna-Tip screwdriver kit), then press hard on either side of the tube toward the bottom with your fingers and thumb, so much so that two tabs, one on either side of the bottom flange of the tube, retract themselves from corresponding slots in the floorplate, then pull forward on the floorplate. This requires fairly strong hands. Most women, for instance, can’t do it at all.

The PMAG has a very different floorplate design. To start with, to remove, it pulls rearward, not forward. Also, its subfloorplate button, and the corresponding hole through the floorplate, are so large you can actually depress the button far enough to remove the floorplate with your fingertip, no tools required. Toolless disassembly for cleaning is a VERY good trait in a magazine.

You will note, when examining the subfloorplate button, a circular hole that passes all the way through the subfloorplate and into the interior of the magazine. This is a drainage hole to allow water that’s entered the magazine to exit; also it’s an index/purchase point if you want to use a pointy rifle bullet tip, ballpoint pen, etc., to depress the subfloorplate during disassembly instead of just using your fingers.

Every person to whom I have mentioned this magazine has asked the same question: “With that floorplate design, the extra-capacity aftermarket GLOCK floorplates like the Arredondos and the Taylors won’t fit on the magazine. Is MAGPUL going to offer their own floorplates for these magazines?” When I put that question to MAGPUL, their response was, “Duane, that would make perfect sense, but we never disclose details before an official announcement,” which my finely honed code breaking skills deciphered as, “Yes.”

Current-production GLOCK magazines actually have three mag catch cutouts. The cutout on the left side of the magazine is for the standard on-the-left-side-set-up-for-a-rightie mag button, the one on the right is so that, on Gen-4 guns, a leftie can switch over the reversible button for left-handed use, the center cut, on the front of the tube, is for the GLOCK ambi mag button system. The PMAG has the left and right hand cutouts but omits the center/ambi cut. No great loss, in my opinion. Speaking as one of the few people to ever test out a GLOCK fitted with the ambi mag button system, I can tell you there is a reason it was a very low production, almost never

encountered system: it just didn’t work very well. The buttons were so hard to depress, you practically had to stand on the magazine release button to get the mag out.

The Glock mag has multiple witness holes along its spine. The PMAG has two witness holes, both at the 17-round mark, one on each side of the tube. I have to admit, I do miss the multiple witness holes. As a competition shooter in disciplines that require downloading my Glock mags, it’s important to me to know whether a magazine is carrying 10 or 11 or 8 or 9 rounds, not just 17. Actually, in general I like being able to know how many rounds are left in a magazine just by looking at it. However MAGPUL found that, with all-polymer construction and the low price that allows (more about which later) and no metal liner, having multiple witness holes simply weakened the tube too much, so they opted for strength and affordability as their priorities.

Speaking of strength, one big question I had was how the PMAG would compare to the famously durable Glock magazine when dropped fully loaded onto an indoor range’s concrete floor. Thus the first thing I did when testing this magazine was to hold it out at eye level, then drop it, fully loaded with 17 rounds of 9mm, onto a concrete floor half a dozen times in a row. Other than a few, barely visible (I mean you have to squint to see them) scuff marks on the floorplate, the PMAG was completely unimpressed.

I put almost 200 rounds of my handloads, consisting of the Rainier 147-grain TRN over Universal powder, and a 20-round box of Black Hills 124-grain JHP, through the PMAG and the gun fed flawlessly. It also always locked the slide to the rear when empty. It did everything a Glock magazine should do.

I measured the interior front-to-rear dimensions of the PMAG, likewise the interior front-to-rear dimensions of a Glock magazine, with my dial calipers and they were identical, so the PMAG should work with any OAL 9mm cartridge that works in a Glock magazine. In other words, if you handload your 9mm rounds so long, for feed reliability in a 1911, they won't feed out of a PMAG, don't blame the magazine, they wouldn't have fed out of a Glock magazine either.

Unlike certain companies that feel they have to trash a competing product in order to pump their own, the friendly folks at MAGPUL told me, “The OEM Glock mag is an incredible magazine, we’ve never denied that. What we want to do with our magazine is give you all the reliability of the factory Glock magazine at $15.95 instead of 30 or 40 bucks. And it’s made totally in America.” In my experience they have succeeded in the goal of giving customers a feature the stock Glock magazine does not have, toolless disassembly, AND at a price less than half of what Glock mags typically sell for.
California Competition Works’ Tandem Tactical Strippers can be used to hold either shotshells or AR-15/M4/Mini 14 magazines, or a combination of both by installing or removing the aluminum spacers provided with each stripper. The Tandem Tactical Stripper holds a maximum of eight rounds of 12 Gauge (10 rounds of 20 Gauge) shotshells or two AR-15/M4/Mini 14 magazines. Each Tandem Tactical Stripper features a BLADETECH Tek-Lok™ Universal Belt Clip, four removable aluminum spacers, and the screws and Allen wrench required to install them.

Tandem Tactical Stripper
L66-00303  $55.00

California Competition Works’ Tactical Strippers are available in three, four or six-shell versions that allow quick access to your shotgun reloads. Engineered to carry up to 3” magnum* shells as well as the longer European shotshells. All CCW Tactical Strippers are equipped with either a belt clip (A. & B.) or a UM84 attachment device (C. & D.) that will accommodate up to a 2-1/4” duty belt.

A. Six-Shell Tactical Stripper  L66-18606  $23.95
B. Four-Shell Tactical Stripper  L66-18605  22.95
C. Three-Shell Aluminum Stripper*  L66-19475  34.95
D. Six-Shell Covered Tactical Stripper  L66-19225  33.95

*Three-Shell Aluminum Stripper accommodates 2-3/4” shells only.

Bifocal Shooting Glasses

By John Marshall

By John Marshall

It was the first of some things, and it was the last of some things. As a milestone transition piece, the U.S. Model 1842 Musket was the harbinger of things to come. At the same time, it was also the last holdout of some of the features of “old school” military long arms. It now occupies a secure place as a classic in the history of U.S. military weaponry.

Until the Model 1842 came into usage, United States soldiers were equipped with .69 caliber flintlock muskets, not far removed from the .69 caliber Charleville muskets obtained from France during the U.S. Revolutionary War. These were smoothbore muzzleloaders, made since 1795 in the U.S. In addition to charging the barrel with powder and ball, the user was required to deposit a small quantity of black powder into a pan in the lockwork. A frizzen that incorporated the pan cover served as the striking surface for the flint-loaded cock. When the gun was triggered, it released the spring-powered cock forward. This caused the flint to strike the frizzen and also uncover the pan. A shower of sparks from the flint striking steel was directed into the pan. This in turn caused the powder in the pan to ignite and transfer its fire through a vent into the breech, igniting the main powder charge. The shooter would have to endure flash and smoke near his face, and hold steady during the time interval it took for the gun to actually fire. Loading the arm took time, exacerbated by the necessity to charge the pan with powder. The Model 1842 changed all that, as it was the first standard long-garm in U.S. service to use a percussion cap to ignite the propellant charge. A blow on the cap by the hammer caused the potassium chlorate and fulminate of mercury compound in the cap to detonate. Now priming could be accomplished in a second or two, as the firer simply placed the cap on a vented nipple over the breech. An added benefit was near instantaneous ignition of the propelling charge when the trigger was pulled. In addition, there was no flash and smoke to mess with the shooter’s vision. The old problem of rain sometimes soaking the powder in the pan was solved, as the percussion cap was way more resistant to moisture. Today, all our individual military firearms use percussion-type ignition, and this began with the Model 1842.

When Springfield Armory and Harpers Ferry Armory were producing flintlock weapons, few of the parts that were made were interchangeable with other arms of the same pattern. Although the parts were similar, enough small differences existed that extensive hand fitting was required to make all the parts work together effectively. Beginning with the Model 1840 flintlock, the Model 1842’s direct progenitor, some effort was made to make some of the parts interchangeable through rigid dimensional standards and measurements. However, it was not until the Model 1842 was produced that all parts became completely interchangeable. This interchangeability was put to the test when a flood at Harper’s Ferry damaged about 9,000 Model 1842s in April 1854. These muskets were disassembled, and the parts placed into boxes containing similar parts. The parts were cleaned and polished, and then reassembled into complete firearms. All of the components fit together perfectly with no problems. Today, the principle of parts interchangeability is applied to firearms manufactured around the world. The Model 1842 marked the start of this concept.

Model ’42 was a dead ringer for the earlier flintlock ’40 except for the lock, and used the same furniture, ramrod, and triangular bayonet. Weighing about 10 pounds, the muskets were standardized at 58” in overall length, with a 42” barrel. The regulation charge for this smoothbore was 110 grains of black powder behind a .69 caliber round ball, wrapped in a paper cartridge. That had been the customary load since the early days of the .69 caliber flintlock muskets, and included enough powder for flintlock priming. The more modern ’42 with percussion priming used the same load, however. The average infantryman could probably get off 2 to 3 shots per minute.

The Model 1842 was purposely built with a thicker barrel, as was the previous flintlock Model 1840. The purpose of this was to allow future rifling of these arms, allowing greater accuracy. In the 1856-1859 time period, approximately 14,000 of them were rifled to use the Minié ball. Somewhat less than 10,000 of these were also equipped
“The U.S. Model 1842 Musket was the harbinger of things to come.”

with adjustable long-range sights. I have personally fired one of those original rifled and sighted ‘42s with 70 grains of black powder and a .685”, 730-grain Minié ball. It was quite accurate and it kicked like a mule! In the 1850s, it was reported by Harper’s Ferry Acting Master Armorer James Burton that the rifled ‘42s firing Minié were actually more accurate than .58 caliber rifled muskets. However, the .69 caliber was abandoned and the .58 caliber adopted primarily because the .58 Minié had about as much mass as a .69 round ball. .69 Minié bullets were quite heavy, and it was tough to carry a bunch of them. It was also felt that the recoil of the .69 caliber arms with the Minié bullet would be too much for the average soldier.

The Model 1842 was produced by both Springfield Armory and Harper’s Ferry Armory, with quantities of about 172,000 and 103,000 respectively. Contract manufacturers included Benjamin Flagg, Asa Waters (both of Millbury, Massachusetts), and Palmetto Armory in Columbia, South Carolina. The smoothbore musket illustrated is most unusual in that although it was manufactured in 1858 at Springfield Armory, it remains unfired to the present day. It was in war reserve storage at Springfield, and then wound up in a museum and kept untouched for over 60 years. It then went through the hands of three owners, maintained in perfect condition. Its value is now in the many thousands of dollars. Collectors seek these arms in virtually any condition, with the rifled versions meriting a modest premium. Mexican War period examples (with dates prior to 1847) are also valued more.

The Model 1842 saw little or no actual service in the Mexican War (1846-1848) due to the different logistics support required compared to the more prevalent flintlocks. Later, it was used extensively in the American Civil War (1861-1865). The smoothbores, loaded with “buck and ball” were devastating when volley fired, capable of filling the air with fast-moving lead. These were used by both Union and Confederate troops. Both smoothbore and rifled versions were deadly arms.

Good condition original specimens are not often seen on the market today, as they have been out of production for over 160 years. Modern reproductions have been made, and are sometimes seen in the hands of Civil War re-enactors. This is entirely fitting given the originals’ use, particularly in the early stages of the war. The ‘42 was the last of the .69-caliber smoothbore muskets, and the first standard U.S. longarm to use percussion ignition and all-interchangeable parts. As such, this important transition piece occupies a respected place among classic firearms.
A stainless steel dial caliper that provides accuracy up to .001 inch. It is made of hardened stainless steel and has a satin chrome finish to prevent glare.

**High Tech Digital Caliper**

- .100 per revolution.
- Covered track for longer caliper life – keeps chips out!
- Made of hardened stainless steel.
- Satin chrome finish. No glare.
- Easily read to .001-inch on large, adjustable dial.
- Measuring faces hardened, ground and lapped.

**Bullet Puller**

- Nobody's perfect. A bullet puller makes it easy to recover all your components.

**Save Your Brass!**

- The **Shellsorter** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **Shellsorter** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **Shellsorter** is made of ABS, a strong plastic that will give a lifetime of service.

By Tom Kirby & Don Diamond

The Arizona Junior High Power Rifle Team, the “Scorpions,” stung their way to impressive victories at the 2015 National Rifle Matches held at the Camp Perry Training Site, Port Clinton, Ohio, in late July. The team secured two highly coveted National Championships: the prestigious NRA Whistler Boy Match, where two Junior team members shoot 50 shots each at bullseye targets at 200, 300 and 600 yards, with a coach reading the wind and directing the shots; and the National Trophy Infantry Team Match (NTIT), the arduous, “Rattle-Battle” match, fired by six teammates and led by two coaches.

Two Arizona Scorpion teammates set a new national record in the NRA’s 2015 Whistler Boy match of 977-30X, eclipsing the previous national record by two points. The former record was established at the National Matches 16 years ago, in 1999. The Whistler Boy is probably the most difficult challenge on the National Matches schedule. The winner earns the right to be named NRA’s National Championship Junior Team. When the previous record was established, most of the Arizona Juniors were still toddlers. Today, their names are in the NRA archives as the new top Junior team, having topped every previous record since 1978, the first year of the match.

Tom Kirby, the Arizona Junior’s veteran coach and program director for the Arizona State Rifle and Pistol Association, coached the two teammates through difficult wind conditions by memorizing the mirage before the Whistler Boy match started. He said that after a dozen years of coaching Junior rifle shooters at the National Matches, he has learned that the mirage at Camp Perry in mid summer will have a subliminal, “safe zone” to shoot in. “The key is to have the patience to wait for the mirage to flow like a river, and then start shooting – and hold up when mirage shivers briefly to signal a change,” the coach said.

The teammates fired 20 rounds each at long-range prone, and they only dropped eight points out of 40 shots between them. The coach stated that many of the other teams were firing during the mirage changes, and didn’t realize that if they would wait for 10 seconds, the mirage would routinely settle into the smooth river pattern that was easier to navigate shots through.

Coach Kirby’s two Junior teammates finished the match with high-master classification scores in the Whistler Boy match, which are their best scores since they began shooting high power rifle. Kade Jackovich finished with a 492-14X and dropped only seven points total out of 50 rounds. Zac Clark finished with a 485-16X after dropping only three points in his rapid-fire sitting and rapid-fire prone positions combined.

As the coach and the two teammates walked off the 600-yard firing line, they realized they were the first team to finish shooting and were concerned that they may have rushed a few shots. But the worries turned to jubilation an hour later when the NRA posted the scores. They realized they not only won the match, but also set a new national record in the prestigious Whistler Boy. “I attribute this win to having great young adults on this team who are serious competitive rifle shooters, and using the Camp Perry mirage as an advantage,” the coach added.

The Whistler Boy match was organized in 1978 by the Civilian Marksmanship Program (CMP) and the NRA as a cooperative endeavor to support the National Board for Promotion of Rifle Practice (NBPRP). Teams consist of two Junior rifle shooters (between 14 and 20 years of age), and a supportive coach. Both team members fire 10 shots standing and 10 shots rapid-fire sitting at 200 yards, 10 shots rapid-fire prone at 300 yards, and 20-shots slow-fire prone at 600-yards. The two scores are added together for the final score. The two teammates and the coach received Whistler Boy Trophies and gold medallions for winning the match and setting a new National Record.

As with the Whistler Boy match, the coaches burned the mirage into their minds for Rattle-Battle, and knew within a half-minute what the wind call
would have to be. On their way to the firing line the coach and caption told the six teammates to put “four-minutes left” on their rifles, and as the targets appeared, the coaches saw the bullet-traces (through binoculars) impacting the center of the silhouettes. More than half of the competing teams under-guessed the strength of the Lake Erie mirage, as no other Junior team was within 70 points of the Arizona Scorpions. Coach Kirby and team captain, Randy Jackovich, said that the mirage reconnaissance was key to winning both the Rattle-Battle and Whistler Boy matches.

The notorious National Trophy Infantry Team match, or “Rattle-Battle,” as it’s called, is 2-1/2 minutes of simulated combat. The match is fired by six team members walking line-abreast military style, shooting at eight silhouette targets at 600, 500, 300, and 200 yards. A team coach and captain walk with the team and use binoculars to follow bullet traces and make quick wind-call changes. Scoring is based on the total number of hits on the eight targets. Hits at 600 yards get four points, 500-yard hits get three points, 300-yard hits get two points, and 200-yard hits earn one point each. All targets that receive six or more hits have been “squared,” that is, the number of squared targets multiplied by itself, count as bonus points. Squaring all eight targets definitely increases the odds of winning.

Two of the team’s shooters (called swing shooters), who are usually placed on opposite ends of the line formation, have to shoot at two targets each, thus covering all eight targets. Teams supply their own 384 rounds of ammo that’s distributed among team members. A shooter who can fire 25 to 30 rounds in 50 seconds with 87- to 95-percent hits, will get more ammo than slower shooters. And, it’s common that some of the best bullseye shooters in the country may not qualify for the Rattle-Battle team, because they are unable to place a high percentage of well-aimed, well-placed shots on silhouette targets, while shooting rapid fire.

Once the command, “Load and be ready” has been given at the 600-yard firing line, (the length of six football fields placed end-to-end), the full-sized Army silhouette targets will be exposed for 50 seconds. During this time, seven teams (squads) amounting to 42 individual riflemen and women, comprised of juniors, seniors, military teams, civilian adults, novice, intermediate, expert, etc., will commence rapid-fire prone on their own bank of eight targets. Match officials in the pits and walking behind the teams with handheld radios certify target hits, targets squared, and total scores of each team. After firing at 600 yards, the seven teams advance very quickly to 500 yards and repeat the same excruciating 50-second exercise. Then do it again at 300 yards in the sitting position, shooting at the shorter Army F-silhouette. Rarely do the better teams have ammo left to shoot at 200 yards.

In just 3.3 minutes of actual shooting (not counting time to walk forward), nearly 2,690 rounds are fired by seven teams. The 32 teams that participated in the Rattle-Battle match at Camp this year fired about 12,300 rounds into Lake Erie. Only the Yellow Perch know where they landed. That’s why they call it the Rattle-Battle, the most adrenaline-charged of all rifle matches.

The Civilian Marksmanship Program’s (CMP), archives reveal that the Arizona Juniors have now won the NTIT Rattle-Battle/Freedom Fire match 14 times. That’s more than any other Junior rifle team in the history of the match.

The Arizona Junior High Power Rifle Team is a division of the Arizona State Rifle and Pistol Association (ASRPA). In recent years, team members have earned dozens of medals, trophies, awards, college scholarships, military academy appointments, and several team members have recently earned the Distinguished Rifleman’s badge.

The Arizona Junior Rifle Team won 19 medals and 11 trophies at the 2015 National Matches. These include:

“Whistler Boy Match” – (1) The Coach Kirby team won the National Trophy and set a new National Record of 977-30X. The two shooters and coach were presented with trophies and gold medals. The shooters also received $500 gift certificates. (2) The Coach Langdon team earned bronze medals with a score of 943-15X.

NTIT “Rattle-Battle” Match – Coach Kirby and Captain Jackovich beat 14 other Junior teams, 19 civilian and military teams, and finished 13th overall, out of 32 teams. No other Juniors were closer than 70 points of Arizona. The six-person team and coaches received trophies and gold medals.

“Freedom’s Fire Match” – Coach Gorin and two team members earned bronze medals in the National Trophy Junior Team Match, the equivalent of the NRA’s Whistler Boy Match.

National Trophy Individual Match (NTI) – An Arizona Junior was in the top 10-percent of all competitors with a 474-17X, and earned 10 “Excellence In Competition” award points, enough to reach 30 points to earn the coveted Distinguished Rifleman’s Badge. There are fewer Distinguished Riflemen than there are Medal of Honor recipients.

“The President’s 100” – The same team member who earned the 10 LEG points and went Distinguished, also joined the Nation’s elite, “President’s 100,” as one of the top 100 riflemen and women out of 1,000 rifle competitors with a score of 287-5X.

The Arizona Scorpions Rifle Team has earned a program possible. Visit our website at arizonajuniorhp.com.
STANDARD FEATURES:

- 4-Station Interchangeable Toolhead
- Uses Std. 1-1/2”-12 UNF Thread Dies
- Manual Shellplate indexing
- Average Loading Rate: 300 Rds./Hr.
- Loads High Volume/Match-Grade Ammo
- Milspec/Match-Grade Priming System
- Ductile Iron/Carbon Steel Construction

L66-50000

Total price as pictured here with optional accessories: $2553.80

.50 BMG Carbide Size Die L66-50075, $869.95
.50 BMG Case Trimmer L66-50050, $384.95
BFR Mounting Post (50.5” High) L66-50150, $269.95
BFR Mounting Hardware Kit L66-50140, $9.95

A. 50 BMG CASE TRIMMER ASSEMBLY
Features an industry standard 1-1/2”-12 UNF threaded body, a 1/4 HP motor, replaceable carbide cutter, quick-disconnect cord and includes the .50 BMG trim die.
L66-50050, $384.95

B. 50 BMG CARBIDE SIZE DIE
The only .50 BMG size die in the industry that’s a full-length solid carbide size die, for increased die life and scratch resistance. It also has a solid carbide expander ball, placed in the middle of the power stroke for easier operation. The die body is standard 1-1/2”-12 UNF thread, and is manufactured to low chamber tolerance specifications.
L66-50075, $869.95

C. 50 BMG POWDER MEASURE ADAPTER
For use with the RCBS .50 BMG powder measure.
L66-50125, $76.95

EXTRA “BFR” TOOLHEADS

L66-19831, $179.95

D. 50 BMG PRIMER SEATING DIE
One of these is included with Dillon’s Big Fifty Reloader, but may be used as an accessory on a separate toolhead. The primer seating die is adjustable for enhanced control of primer seating. Includes two primer punches: one flat, match-style primer punch and one cupped, Mil-Spec primer punch.
L66-50200, $149.95

E. 50 BMG PRIMER POCKET SWAGER
Makes it easy to remove the military crimp.
L66-50001, $299.95

E.(1) PRIMING CONVERSION
Converts Swager to Priming System.
L66-50003, $76.95

F. 50 BMG PRIMING SYSTEM
Allows off-the-machine primer seating.
L66-50002, $299.95

F. (1) SWAGER CONVERSION
Converts Priming System to Swager.

**RCBS EQUIPMENT**

**Dillon's New Bench Wrench**

Fits new 1” die lock rings

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you are first setting up a “naked” machine, there is plenty of wrench room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded toolhead.

Dillon Precision has addressed this in two ways. We now offer new 1” die lock rings and a 1” Bench Wrench to fit them. This combination gives much more room to re-adjust dies after they’re already mounted. The opposite end of our new wrench is a 7/16” box-end for adjusting the Powder Bar of any Dillon Powder Measure. Our new lock rings fit any standard 7/8” x 14 dies.

1” Dillon Die Lock Ring

L66-14067 | $1.35

5-Pack of Die Lock Rings

L66-10669 | 4.15

1” Dillon Bench Wrench

L66-10842 | 7.95

(Buy two or more 1” Bench Wrenches for $7.10 each)

| Wrench/Lock Ring 5-Pack | L66-10068 | 9.95 |

**Trim Pro-2™ Case Trimmer Kit**

L66-43231 | $139.95

The RCBS Trim Pro-2 manual case trimmer now features a spring-loaded “universal” shell holder that will accommodate case head diameters from .250” to .625”. Comes with pilot calibers: .22, .24, .25, .27, .28, .30, .35, .44 and .45.

**RCBS Scale Check Weights**

Standard Set: 60.5 grains for powder charges.

| L66-12297 | $34.95 |

Deluxe Set: 510.5 grains for bullets, cases and powder.

| L66-12458 | $49.95 |
The Tru-Weight Trigger Tension Scale has a range from eight ounces to eight pounds. A unique weight indicator remains at the exact point of trigger release, making it easier to read your trigger pull pressure.

L66-19915 $2.95
ElZetta Tactical Flashlight Mounts

Every Elzetta ZFH1500 Flashlight Mount for AR15 rifles and ZSM Tactical Shotgun Flashlight Mount comes with sizing adapters, giving the mount the ability to accommodate flashlights from 0.7 to 1.05 inches (18 to 27 mm) in diameter. This includes flashlights from popular manufacturers such as InForce®, Streamlight®, Pelican®, Laser Devices®, SureFire® and of course, the Elzetta® ZFL-M60. (Sizing Adapters are not required when using an Elzetta ZFL-M60 or other 1-inch lights.) The Elzetta ZSM is made from the same advanced glass-filled polymer that has proven itself in the popular Elzetta ZFH1500.

The NEW Elzetta ZRX Tactical Flashlight Mount is made for flashlights with standard one-inch bodies and will accommodate a range from 0.94 to 1.04 inches (23.8 to 26.4 mm). This includes many popular tactical flashlights including the Elzetta ZFL-M60. The Elzetta ZRX clamping rings are made from Mil-Spec Type III Hard Anodized aluminum, the body is a glass-reinforced polymer and the hardware is steel. The ZRX weighs 1.1oz (32g).

ZFH1500 AR15 Flashlight Mount L66-12020 $29.95
ZSM Tactical Shotgun Mount L66-18050 39.95
ZRX Tactical Flashlight Mount L66-15487 35.00

PROTEKTOR MODEL
The Original Leather Sandbag* Rifle Rests

All Protektor Model leather bags are made with the best top grain cowhide available. The welded steel rest is strong enough to stand on and won’t break if dropped (Owl Ear Front Bag sold separately).

A. Front Bag L66-10880 $19.95
B. Rifle Rest L66-10883 59.95
C. Std. Front Bag L66-10881 22.95
D. Rear Bag L66-10882 26.95

*Sand not included.

The Dillon Shooting Mat

Dillon’s shooting mat is made of tough ballistic-weave nylon fabric, with a large skid-resistant elbow pad area. The “ground” side is moisture resistant and wipes clean easily. The padding is dense, closed-cell foam to provide both shooter comfort and a stable shooting base. The mat is equipped with a shoulder strap, a carry handle and two straps with snap-release buckles. Dimensions: 66” x 27.75”

Mildot Master® L66-14762 $29.95

You can become a master at using a Mil Dot reticle with this ballistic slide rule! Comes with a 24-page instruction manual.

Open 7-6 MST, M-F; 8-3 Sat. • VISA, MasterCard, Discover, C.O.D. • Shipping and HazMat Not Included

By Duane Thomas

Most problems with 9mm singlestack 1911s can be traced to the magazines, because, let's face it, most singlestack 9mm 1911 magazines suck. As those of us with serious experience with the singlestack 9mm 1911 know, it can be a terribly frustrating gun from a standpoint of feed reliability, or actually reliability in general, for the following reasons.

1. The classic malfunction on a 9mm 1911 is the cartridge taking a nosedive right into the feed ramp and stopping there. This becomes especially common if the magazine has been designed to hold 10 rounds, though it happens with some frequency even with standard capacity 9-rounders. Also 10-rounders are notorious for leaving very little spring compression left over when fully loaded, so they're difficult to seat in the gun with the slide forward, especially during a speedload.

2. Also, if feed-lip dimensions are too loose, which in my experience is often the case with singlestack 9mm 1911 magazines, the top cartridge in the mag has a tendency while the gun is cycling to drift upward in the feed lips, so it winds up half-in, half-out of the magazine, the widest portion of the case body even with the feed lips, and then stay there, stuck and unfeedable.

3. Even if rounds will feed, another classic 9mm 1911 malf is that after you fire a shot, the top round in the magazine drifts forward in the feed lips, and winds up sticking so far out of the mag it pins the mag in the gun and the magazine will not fall free when you punch the mag release. It is necessary to physically pull the magazine out of the gun, and when you do that, it generally causes the top round in the mag to come loose and follow the magazine out of the well. If you're in the habit of popping the mag out of a holstered gun so you can then reload with a fresh mag, also while in the holster, you wind up with a loose round sitting inside the mag well, against the bottom of the slide, that prevents the fresh mag from seating.

4. Even if they will do everything else they should (feed reliably, snap easily into the gun, hold the rounds inside the magazines until they need to feed, drop free you punch the mag button), the magazines generally won't lock the slide to the rear when you shoot the gun empty.

In my experience, full-sized 9mm 1911s are actually far less likely to feed reliably than compacts. It's generally accepted that, all else being equal, same cartridge, same basic gun design, compacts are less feed reliable than full-sized guns. As in so many other ways, the 9mm 1911 is different. I know several people carrying Kimber Custom Shop 3” 9mm 1911s with satisfaction. I have had in both a Kimber Aegis and Ultra CDP 9mm, both 3” barreled guns, for test and eval that proved 100-percent feed reliable. I had a custom Officer’s-sized 9mm 1911 built up for me years ago that has also been a very reliable gun. It’s the full-sized 9mms that, in my experience, are very hard to make work right. My theory to explain this is that it’s a lot easier, given light 9mm recoil, to get a 1911 slide moving fast enough to ensure feed reliability if it’s a short, light Officer’s-length slide than a big, heavy Government-Model-length slide.

So, the perfect singlestack 9mm magazine would work in full-sized guns, feed smoothly and consistently, hold the rounds inside the magazine until they need to feed, snap easily into the gun, lock the slide back when empty, and fall free when you punch the magazine-release button in any condition from one shot down to empty. Also, it would be nice if it held 10 rounds. And could
Years after pretty much giving up on the full-sized singlestack 9mm 1911 concept, I have found a magazine that does all those things, the stainless steel 10-rounders from Chip McCormick Corporation (See Page 68). These magazines were recommended to me by famed firearms instructor Ken Hackathorn, who reported to me he’s actually doing a lot of shooting with, and carrying of, a full-sized 9mm 1911 these days. I found that fascinating, since I know Ken wouldn’t be carrying equipment that didn’t work.

Let me preface the comments I’m about to make by saying that no magazines can make a gun work if it is, on a basic level, a piece of trash, and I did prejudice things in favor of success by making my test-sample gun a Wilson Combat ESP Classic, a full-sized, singlestack 9mm from the famous 1911 house.

I received six magazines from CMC for test and eval. I began by running through these magazines, and this gun, 60 rounds, 10 rounds per mag, of my handload consisting of the X-Treme 115-grain RN over Hodgdon’s Universal powder. In every instance, I snapped the magazine into the gun with the slide locked back, depressed the slide release to chamber the top round (since in my experience if a 9mm 1911 is going to have a nose-dive malfunction it’s most likely to happen with the top round out of the mag), fired one shot, hit the magazine release button to check whether the magazine would drop free, and the slide locked to the rear when empty, with every load.

I have to say, I was extremely impressed with these magazines. They make a full-sized 9mm 1911 do everything a gun should do, and I have never yet found any other singlestack 9mm 1911 magazine that can do that. If all six magazines had dropped free when empty, instead of only four of the six tested, I would be giving these magazines an unqualified 100-percent review. As it is, as previously mentioned, I don’t feel this can be blamed on the magazines, or even the gun.

If you are carrying, or competing with, a full-sized, singlestack 9mm 1911, I would lay in a supply of CMC 10-rounders, test them to make sure they all operated in your gun as well as they did in my test piece, also check they all fall free during a speedload, and when you were done you’d have a 100-percent reliable, full-sized 9mm 1911. Honestly, prior to testing these magazines, I would not have believed such a thing could exist.

Duane’s website is Self-Defense-Handguns.com
Try a few of Dillon's heavy-duty, lightweight plasticammo boxes. If you're like us, you're tired of crumbling styrofoam and cardboard boxes held together with layers of tape. These boxes are perfect for range or field use. Designed to keep out dirt, dust and rain.

NOTE: "38" cases fit .38 Super, .357 Magnum and .38 Special; "44" cases fit .44 Mag., .44-40 and .45 Colt; and "45" cases fit .45 Auto and .45 ACP. Dillon cases fit all calibers.

Dillon AkroBins

AkroBins are perfect for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550B/XL 650 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your “stuff” together.

Dillon Utility Boxes

Dillon's Utility boxes are ideal for all those accessories that don’t quite fit into the compartments of your shooting bag. The large box measures 13-1/2" x 5-3/4" x 2-1/4" and the small box measures 4-5/8" x 6-3/8" x 1-5/8". Use them for cleaning gear, extra magazines, repair parts, first aid supplies, reloading accessories and tools – the list is endless.

Gun-tips® Extended Reach Firearm Cleaning swabs by Swab-its® revolutionize the way you clean your gun. The foam tips are lint free, reusable and ideal for cleaning trigger assemblies, slide rails, springs, extractors and anywhere else space is tight. 24 per package. L66-15316 $4.99

Bore-Whips™ .17 and .22 caliber (pictured) by Swab-its® are ideal for air rifles, rimfires or any other .17 or .22 caliber firearm that’s difficult to clean from the breach. The foam tips are reusable and the handle functions as an empty chamber indicator.

Gun-tips® foam swabs are reusable and replace cotton swabs. 9-pack L66-15316 $4.99

Ram Rodz Barrel and Breech Cleaners

The RamRodz® Range Kit comes with 400 Breech Cleaners, 100 .22-Caliber swabs, 60 .38-Caliber swabs, 50 .40-Caliber swabs, 40 .45-Caliber swabs and 30 .50-Caliber swabs. L66-43293 $34.95
Bore Snake, the “World’s Fastest Gun Bore Cleaner” from Michaels of Oregon is a better way to clean handguns, rifles and shotguns. Originally sold as a field tool, this product is popular with gunsmiths and benchrest shooters for its ease of use. They say, “We’re addicted to the Born Snake!”

Snake Oil is a derivative of an FDA certified medical lubricant used in high-speed medical drills.

- Provides a film that separates and protects moving parts, for smoother operation and increased efficiency.
- Contains no evaporants and has a film affinity in excess of two years.
- Reduces the collection of dirt, dust and other contaminants.
- Performance in extreme conditions is unparalleled.

• Performance in extreme conditions is unparalleled.

M-PRO7™ Gun Cleaner is odorless, non-toxic and biodegradable. “Safe-ly cleans rifles, handguns, shotguns…, black powder, corrosive priming deposits and much more.”

- 4 oz. L66-10139 $11.95
- 8 oz. L66-10138 18.95
- 32 oz. L66-11298 40.95

M-PRO7™ Copper Remover works up to four times faster than ammonia-based cleaners and is odor free.

- 4 oz. L66-19370 $11.95

FrogLube Solvents are designed to quickly attack surface fouling, baked-on or filmed residues and other metallic fouling such as lead and copper, while protecting firearms coatings, paints, wood and other materials from the corrosive effects of petroleum-based, flammable and toxic weapons care products.

- 4 oz. Paste L66-15443 $10.99
- 4 oz. Liquid L66-15444 $17.59

Sweet’s Australian 7.62 Solvent easily removes powder residue and stubborn copper fouling. It’s harmless to steel, a non-acidic formula with five percent ammonia. If you shoot a rifle, you ought to try cleaning it with Sweet’s.

- L66-13128 $12.95

FrogLube is a bio-based cleaner, lubricant and preservative (CLP) product. FrogLube Solvents are designed to quickly attack surface fouling, baked-on or filmed residues and other metallic fouling such as lead and copper, while protecting firearms coatings, paints, wood and other materials from the corrosive effects of petroleum-based, flammable and toxic weapons care products.

A DCO SUPER THUMB® offers models for popular centerfire pistols and 10/22 style magazines.

ST1 is for 9mm and .40 caliber Beretta, Browning, Ruger, SIGARMS, S&W, etc. In addition, the ST1 has interior rails and grooves to accommodate Colt Government magazines.

ST2 is for GLOCK and Para-Ordnance magazines.

ST3 handles virtually all centerfire, single-column magazines.

ST22 is for Ruger 10/22 rifles.

STJR is for Ruger, Browning, Colt and High Standard .22 pistols.

Adjustable Target Sight for 1911s

This Adjustable Target Pistol Sight is precision machined and fits in a standard “Bomar slide cut.” Yeah, the services of a gunsmith are required to cut the slide (unless your 1911 pistol already has a Bomar cut) but the results are worth it.

Adjustable Pistol Sight L66-18210 $33.95

Magpul 1911 Grip Panels feature reinforced polymer construction and a unique diamond-shaped cross section to prevent twisting in the hand. They also have an aggressive mag-release cut out and are compatible with ambidextrous safeties.

FDE L66-43237 $19.95
BLK L66-43236 19.95
ODG L66-43238 19.95

California Competition Works' Magazine Storage Sleeves make it easy to organize your pistol magazines. The optional I.D. Tag/Hanger makes it less likely that you’ll show up at a match with the WRONG magazines!

Four-Magazine Storage Sleeve L66-19226 $14.95
Six-Magazine Storage Sleeve L66-19227 17.95
Magazine Sleeve I.D. Tag/Hanger L66-19476 1.95

Secure Firearms Products' Universal Spring Tester will help you determine if the recoil spring in your pistol needs replacing, and you’ll save time and money by testing and organizing loose recoil springs in your shooting bag.

Recoil Spring Tester L66-15305 $39.95
Currently Check-Mate Industries is the largest M14/M1A magazine manufacturer for the United States Military. Check-Mate Industries is recognized as being America's number one manufacturer of M14 magazines. We offer CMI M14/M1A magazines in 5-, 20- and 25-round capacity.

Adjustable M1/M1A Gas Systems

All Schuster Mfg. Inc. adjustable gas plugs are made in the U.S.A. from hardened tool steel, Parkerized and feature a lifetime factory warranty. By adjusting the volume of gas, you change the speed of the op rod and the barrel harmonics. If you’re working up your own handloads, a quarter of a turn WILL affect your group size. Includes instructions and the adjustment tool (Allen wrench).

**BurrIS**

**MTAC 1.5-6x42mm**

The resilient MTAC 1.5-6x42mm riflescope is tough, with superb, glare-resistant glass and a sleek, snag-free profile. This compact model is perfect for 3-Gun, close quarter battle (CQB), or big-game stalking. With its high-performance glass, solid 1-piece tube, and internal double spring-tension assembly, this MTAC Riflescope can handle the harshest shooting environments.

And it's guaranteed by the BurrIS Forever Warranty™.

The fast-action Ballistic CO™ reticle was designed for competitive shooters and law enforcement and military operators. The low-magnification, bright, fast-action reticle also serves dangerous game hunters well.

A circular, center “donut” provides ultra-fast engagement at close distances, and smaller reticle dots provide trajectory compensation out to 600 yards for the 5.56 and 7.62 cartridges. The illuminated reticle gets you on target faster in any lighting condition and increases accuracy when the target is dark.

Elevation and windage dials are calibrated to 1 click = 0.5 MOA; both can be reset to 0 once the scope is sighted in. The eye relief is generous – up to 4” – for comfortable shooting.

The scope features an ergonomic power ring for easy grip and quick power setting changes; finger-adjustable MTAC mil-rad target knobs for easy precision adjustments; and a rubber-coated eyepiece provides protection, comfort, and style.

**BurrIS**

**MTAC 1.5-6x42mm**

The resilient MTAC 1.5-6x42mm riflescope is tough, with superb, glare-resistant glass and a sleek, snag-free profile. This compact model is perfect for 3-Gun, close quarter battle (CQB), or big-game stalking. With its high-performance glass, solid 1-piece tube, and internal double spring-tension assembly, this MTAC Riflescope can handle the harshest shooting environments.

And it's guaranteed by the BurrIS Forever Warranty™.

The fast-action Ballistic CO™ reticle was designed for competitive shooters and law enforcement and military operators. The low-magnification, bright, fast-action reticle also serves dangerous game hunters well.

A circular, center “donut” provides ultra-fast engagement at close distances, and smaller reticle dots provide trajectory compensation out to 600 yards for the 5.56 and 7.62 cartridges. The illuminated reticle gets you on target faster in any lighting condition and increases accuracy when the target is dark.

Elevation and windage dials are calibrated to 1 click = 0.5 MOA; both can be reset to 0 once the scope is sighted in. The eye relief is generous – up to 4” – for comfortable shooting.

The scope features an ergonomic power ring for easy grip and quick power setting changes; finger-adjustable MTAC mil-rad target knobs for easy precision adjustments; and a rubber-coated eyepiece provides protection, comfort, and style.

Bushnell Trophy TRS-25 Ultra Compact Red Dot Sight

Bushnell’s Trophy TRS-25 Ultra Compact Red Dot Sight is designed for use on shotguns, handguns and rifles. It is constructed and assembled by highly skilled craftsmen to Bushnell’s high quality standards. The precision and craftsmanship with which this scope was built ensures its performance under demanding conditions. This scope will provide the shooting accuracy and repeatability which have made Bushnell legendary. Features unlimited eye relief and a three-minute of angle dot.

TRS-25 as pictured w/o riser L66-11643 $89.95
TRS-25 with riser L66-31318 $119.95

Scout Scope Mounts for AK, SKS Rifles

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle L66-25374 $79.99
Scout Scope Mount for SKS Rifle L66-25373 $78.99

By Brian Dervin Dillon, Ph.D.

Americans have had a long-term love affair with .22 auto pistols, and rightly so. Few things are as much fun as making cans jump in the desert with a little .22, and few firearms are so perfectly suited for specific jobs like rattlesnake and rabid animal retirement, or coups de grace while deer or pig hunting. Besides these functions, the more you shoot, the better you get, so every little .22 pistol hit in the X-ring counts towards improved accuracy with larger calibers, like .357 Magnum and .45 ACP. Even with .22 LR ammo costs skyrocketing out of control at present, the little pistols are still cheaper to shoot hundreds of rounds through than larger-caliber guns with even the most economical handloaded ammunition. And, in a pinch, a reliable .22 auto can be an effective defensive firearm.

Semiauto .22s are not “toy guns” – ask any homicide detective in any major U.S. City – he or she will tell you that 9 out of 10 professional “hit men” prefer .22s over all other calibers.

In 1938 came the new “Woodsman Match Target” model, called the “Bulls-eye,” after the symbol on its left side. It had a heavy, slab-sided barrel, adjustable rear sight, and over-large, wrap-around, one-piece “elephant ear” grips, extending far beyond the metal grip frame. General George S. Patton, Jr. (Blue Press No. 262), liked this very accurate plinker, and carried one in a belt holster in the California desert while training his armored troops in the Spring of 1942. He called it his “jackrabbit gun.” One of Patton’s officers was my Uncle Jack Dillon (Blue Press No. 266). Grandpa Dillon’s Woodsman, at his death in 1938, had gone to Uncle Jack, so at the same time that Patton was popping away at jackrabbits near Indio, California with his high-dollar Woodsman, so was mustang Armor Lieutenant Jack Dillon, with his father’s earlier, low-dollar one, but only while off-duty. Photographs of Patton wearing his .22 auto pistol, standing in front of his Stuart tank (Figure 3, Left) have been misidentified and misinterpreted for 70-plus years.

First and foremost (Figures 1 and 2) is my grandfather’s Colt Woodsman First Series, made in 1927. The Colt .22 auto pistol was initially marketed in 1915, exactly a century ago. Sales were brisk, helped along by the success of the still-new .45 ACP Model 1911, another John M. Browning design. It was not called the “Woodsman” until 1927, a dozen years into its run. Before then it was simply the “Colt .22 Target Model,” and the little pistol soon set the standard by which all other .22 autos were judged. It was reliable, accurate and fun to shoot. Feeding was flawless, as its slanted magazine kept the rims of successive rounds from hanging up on each other. The first-generation Woodsman was made for 32 years, until 1947. Today collectors plunk down big wads of cash for the same pistol granddad paid less than $25 for new. We don’t have a photograph of Grandpa Dillon (Blue Press No. 253) with his Colt Woodsman, so a better known, if less macho, second-choice (Figure 3, Left) will have to stand in for him.

In 1938 came the new “Woodsman Match Target” model, called the “Bulls-eye,” after the symbol on its left side. It had a heavy, slab-sided barrel, adjustable rear sight, and over-large, wrap-around, one-piece “elephant ear” grips, extending far beyond the metal grip frame. General George S. Patton, Jr. (Blue Press No. 262), liked this very accurate plinker, and carried one in a belt holster in the California desert while training his armored troops in the Spring of 1942. He called it his “jackrabbit gun.” One of Patton’s officers was my Uncle Jack Dillon (Blue Press No. 266). Grandpa Dillon’s Woodsman, at his death in 1938, had gone to Uncle Jack, so at the same time that Patton was popping away at jackrabbits near Indio, California with his high-dollar Woodsman, so was mustang Armor Lieutenant Jack Dillon, with his father’s earlier, low-dollar one, but only while off-duty. Photographs of Patton wearing his .22 auto pistol, standing in front of his Stuart tank (Figure 3, Left) have been misidentified and misinterpreted for 70-plus years. One such May 1942 exposure, taken by a Life photographer but never used by that magazine, belatedly (and heavily cropped)
appeared on the cover of Newsweek Magazine on July 26, 1943. The article was entitled: “General Patton: From Tunisia to Sicily,” but the cover photo, pulled from the files, was of him in the California desert, non-regulation football helmet on his head and non-regulation Woodsman Match Target .22 in his holster.

A few thousand of these “Bullseye” Woodsman .22s were bought by the government for WWII Army pistol training. Second- and third-generation Woodsman variants also appeared postwar. Colt changed its designations for its .22 auto pistols many times, sometimes from one year to the next. By 1970, you could buy the “Huntsman Model S-5,” the “Targetsman Model S-4,” the “Woodsmen Target Model S-2,” or the “Woodsmen Match Target Model S-3,” ranging in price from just over $70 to $115. Colt discontinued all Woodsman variants in 1976, after making more than 650,000 of them, finally surrendering to Hi-Standard and Ruger. The weakness of the Woodsman design, almost a fatal flaw in elderly guns, is the small size of the main or recoil spring. This spring, adequate for cycling the action when brand-new, over time loses its strength, so that in most guns that have had many thousands of rounds through them, or are now over 80 years old, like Grandpa Dillon’s 1927 example, the spring can barely return the slide as required. Weak recoil springs render the pistol either a single shot, or one where each successive round must be chambered by manually cycling the action with both hands. When you replace this spring, as you inevitably will in any older pistol, you will be amazed by its similarity to those feeble examples found inside retractable, plastic, ballpoint pens.

Next up is my father’s Hi-Standard Model B Type II, a short-barreled (4-1/2”) pistol made in 1940 (Figures 1 and 2). The Model B was marketed as a less-expensive ($22) alternative to the ($32.75) Colt Woodsman. My 16-year-old father compared the Colt and Hi-Standard advertisements in the 1940 Shooter’s Bible and chose the Model B. He bought it mail order, with money earned from his paper route. This was no big deal in California at the time as all the legal requirements for both purchase and possession were satisfied by a five-minute interview with the Marin County Sheriff: “What do you want it for, kid?” “Target practice” “O.K.”

Dad’s 1940 Model B replaced his earlier .22 single-shot pistol bought used, also mail order, from Bannermans.

Like the Woodsman, the Hi-Standard is very well made, and beautifully finished. But also like the Woodsman, the flaw in its design is its tiny, very weak, main or recoil spring. The Model B was the descendant of the Hartford Arms Company Model 1925 .22 Auto Pistol, a 10-shot gun that, but for its longer extractor, was a very close copy of the Colt Woodsman. In fact, magazines interchange between them. It is thought that only around 5,000 Model 1925s were ever made. Hartford Arms was bought by Swedish immigrant Carl Swebelius, a machinist and tool designer. He had formed the High Standard Company in 1926 to make hardened drills and precision machine tools. The Hartford Arms .22 auto was sold until 1932, when Swebelius began selling the first, almost-identical, pistols under the Hi-Standard name. Just in time for the Great Depression, the Hi-Standard Model B, at only $20.00, was priced to undercut the Colt Woodsman. The production sequence is the reverse of “normal.” The comparatively rare adjustable rear-sight “Model A” (1938) actually post-dates the much more common “Model B” (1932) and only lasted until 1942. The rugged, accurate, fixed-sight Model B had a good run from 1932 until 1946, with over 60,000 made. Dad shot his Model B in the hills above his hometown of Sausalito, California, prewar as a teenager, and postwar as a combat veteran after demobilization from the 79th Infantry Division (Figure 3, Center).

Like Grandpa’s Woodsman, Dad’s Model B is still shot by the third and now fourth generations of Dillon .22 pistoleros.

Hi-Standard continued making the hammerless Model “B” into the war years, and supplied several thousand of them to the U.S. Military beginning in 1942. The standard, blued civilian pistol morphed...
into a Parkerized military model, only made with the short (4-1/2") barrel. These guns are marked “Property of U.S.” and are known by collectors as Model B-U.S. versions. Hi-Standard really hit it big with their H-D model with exposed hammer, introduced in 1940. More than 50,000 H-D .22 autos were bought by the U.S. Army between 1942 and 1946, the later, Parkerized, versions came to be known as the “Hi-Standard Military Model” by those, mostly OCS students, who trained with them. Hi-Standard even made some “assassination pistols” for Wild Bill Donovan’s OSS, including silenced/suppressed versions. The H-D was phased out in 1955, superseded by the “Olympic” Model, which in turn was superseded by the “Victor” Model. In 1970 the entry-level “Dura-Matic” was priced below all Colt .22s, but still cost more than a Ruger Mk I. The Hi-Standard “Sport-King” cost the same as the Colt “Huntsman,” yet that year the company offered nine other target .22 autos, including their “Buck Rodgers” adjustable-weight “Olympic” models, looking very much like Space guns. The most expensive Hi-Standard target pistols, all of them incredibly accurate, sold for twice the cost of their cheapest model, $125 to $130. By 1973 the “Dura-Matic” was gone and the lowest-priced Hi-Standard was now the “Plinker,” at $65, still $15 more than the Ruger. The “Supermatic” target .22 cost twice as much as the “Plinker,” $120. Nine years later, the “Supermatic” cost more than $300, and by 1983 was priced at over $360. In 1982 you could buy an adjustable-sight Ruger Mark I Target Model for less than half that, $150. Hi-Standard was taking a beating from Ruger, day after day, year after year. The company fell on hard times in 1984, and ceased production. After a decade of inactivity, it was reborn, in Texas, in 1994. Now a new generation of Hi-Standard pistols carry the proud old name forward.

Last up is the most recent design, and my personal favorite, the Ruger Mk II (Figures 1 and 2). I believe it to be the most reliable, trouble-free, durable and inherently accurate .22 auto pistol ever made. The American public agrees, for the Ruger, since its introduction in 1949, has out-sold every other .22 auto pistol and continues to do so. The first, “Standard Model” (now called the Mark I, yet only after the introduction of the later Mk II) was a nine-shot, its bolt locking back after the final shot, without a thumb-operated bolt release lever. In the mid-1960s a “plain Jane” Ruger Mark I sold for just over $40. By 1970 the same pistol in either standard (6") or “hit-man” barrel length (4") still cost less than $50 brand new. The “Target Model” with adjustable rear sight cost just under $70, as did the bull-barreled target variant. By 1982 the price for the standard Ruger, during its final production year, had jumped to $120, three times what it had been 20 years earlier. The new Ruger Mark II also appeared in 1982, and stayed in production until 2005. It was priced right at $150. The Mark II magazine was increased to a full 10 rounds, but more important was its left-side thumb release, which greatly simplified manipulation. Since the pistol had always worked on the internal bolt, rather than external slide, principle, this was not a “slide catch” but what the Ruger company described as a “bolt-hold-open” catch. The Ruger Mk II quickly gained favor with Special Forces and Navy Seals who needed a small-caliber pistol for “close in” applications, sometimes suppressed.

The Ruger Mark III, appearing in 2004, introduced two design changes, one useful, the other not. A new, left-side, magazine release button simplified magazine changes. Now, for the first time, you could drop the magazine “one-handed.” Unfortunately, the new Mk III “loaded chamber indicator” created a lead, dirt, and gunk trap that did not previously exist. This “safety” feature accelerated the need for cleaning, while at the same time obstructing the cleaning process itself. Magazines specific to the three different Ruger .22s do not interchange, which causes headaches for the unwary. The grip angle is the same on all three Rugers, and, in fact, is quite similar between the Colt Woodsman, Hi-Standard, and Ruger Mk I, II and III. But recently Ruger has introduced a different .22 auto pistol, the 22/45, with a less pronounced grip angle, intended to replicate that of a standard 1911 .45 ACP. To me, this seems no improvement over the Mk II. Furthermore, its “half-plastic” concept is anathema to many of my generation. We stopped playing with plastic guns back in the 1950s, moved on to real guns in the 1960s, and few of us feel any desire to go back to plastic now. In addition to the standard “pencils,” or tapered-barrel Rugers, are also “target” versions with bull-barrels, fluted barrels, flat-sided recessed barrels, etc. My own experience – from shooting all of them – is that none are inherently any more accurate than the Mk II 6-inch tapered-barrel pistol. In fact less so, unless you are shooting benchrest, because the bull-barreled guns are nose-heavy while the “pencil” is not. And, for convenience of daily carry, no clumsy bull-barrel can compare with the handy, much lighter, tapered-barrel pistol (Figure 3, Right).

So, how do the Colt, Hi-Standard, and Ruger stack up against each other? Two things make any pistol accurate, its trigger and its sights. The triggers on all three are outstanding, far better than most. The fixed sights on all three pistols are good, but the largest, most visible and fastest to acquire, are on the Ruger Mk II. Unfortunately, the later Mk III sights seem less reliable. Over a five-year period I taught more than 700 beginners pistol shooting at a local range; each student had to fire 100 rounds in one of my eight Ruger Mk III teaching guns. Constant use by neophytes resulted in Mk III rear-sight loosening and shifting – a problem unknown from my three different Mk II Rugers after hundreds of thousands of rounds and more than 30 years of constant use, and also absent from granddad’s Woodsman and dad’s Model B.

We have already noted the recoil spring problem in these two latter pistols; now we move on to the universal pet peeve of Ruger owners. “Raccoons” (shooters who spend more time cleaning
their guns than actually shooting them, like their namesakes who endlessly wash and polish apples, yet seldom actually eat them) routinely get in trouble with Ruger .22 auto pistols. 1911 shooters accustomed to disassembling their .45s invariably also strip their Ruger .22s down to the last small part, but once they put the Hoppes and toothbrush away, find that they cannot, for the life of them, get the little semiautos back together again. Just like everybody else, the first time I got my Mark II apart, on a Friday afternoon, I could not reassemble it. Neither having three hands nor a small chimpanzee with extra-long fingers to assist me, the inevitable telephone call to the Ruger hotline had to wait until the following Monday. A very patient, very helpful person then told me how to get the pistol back together while I wrote down very extensive notes. I have spent more than three subsequent decades without disassembling any of the three Mk II pistols owned since, cleaning their inaccessible inner regions with homemade, whit-tled wooden “cleaning chisels” and compressed air instead. The wise advice of combat veteran Uncle Jack Dillon is relevant to Ruger .22 auto pistols: “Don’t be a raccoon – clean your gun only if it is dirty, not when it is already clean. And, if it ain’t broke, don’t fix it, or take it apart.”

Three successive Ruger six-inch “pencils” have been my companions while doing on-foot archaeological surveys of mountain timberlands and sandy, sagebrushy, deserts all over California. I bought the first one shortly after the Georgia peanut-farmer left the White House, the last one in 1987. I killed many buzzworms and spent many happy hours after work plinking away at targets illuminated by flickering campfire light with them. The same little pistols also sometimes figured in non-verbal communication in boondocks bars in Central America, long ago and far away, and not in this jurisdiction. Such establishments — recruiting locales for jungle archaeology hands, but also gathering spots for “hard cases” at upper reaches of the Mohs scale — seldom welcomed strangers, even less so strange gringos. After an initial salutation, I would toss an empty beer can out the back door, then, from the doorframe, “teach it to dance,” hitting it ten times in under 15 seconds. Now, with everyone’s undivided attention, I would produce my other four loaded magazines, select one, reload the pistol, and holster it. Then I would buy a round of beers for everybody, bid them to “go with God,” and vamoose.

Such demonstrations made four important points without the distraction of any unnecessary conversation: 1.) That despite being a gringo, I was a good guy; 2.) That despite my pistol being just a little .22, I could hit my target with it every time; 3.) I had 50 rounds ready to go in five loaded magazines. So, consequently, and most importantly; 4.) I was nobody to trifile with. The word, of course, got around. Despite some “interesting” situations, over many years of archaeological research in very isolated places, I never had any serious trouble.

Twenty-five years ago, after breaking a ball-joint and front coil spring on my 3/4-ton pickup (Central American jungle roads would reduce most North American “off road enthusiasts” to quivering puddles of ectoplasm) I began hitch-hiking towards the nearest wrecking yard, two days and two mountain ranges away. I was picked up by a couple of truck drivers grunting along in low gear in a heavily laden stakebed. From my perch atop burlap sacksful of just-picked corn I heard the new guy ask the old-timer, through the cab’s broken back window, “Who is that gringo? Isn’t he afraid of hitch-hiking around here?” I was gratified, but not especially surprised by the answer, “No, he’s a good guy. Nobody bothers him because everybody knows he is a dead shot.” Although I wasn’t even carrying the pistol at the time, Bill Ruger’s near-perfect 1949 invention was still helping folks like me make friends and influence people.

Figure 3: Left: George S. Patton, Jr. in May 1942, in the California-Arizona Desert Training Center on maneuvers. Patton called the little Colt Woodsman Match Target .22 auto he carried near Indio, California, his “Jackrabbit gun.” Life Magazine photo, later used on the cover of Newsweek Magazine, July 26, 1943.

Center: Richard H. Dillon, 79th Infantry Division combat veteran, back from the European War, shooting his Hi-Standard Model “B” prone in the hills above Sausalito, California, in 1946.

Right: Brian D. Dillon with his holstered Ruger Mk II commuting to the daily grind in Central America, 1990.

Dillon Precision announces the release of John Marshall’s new book *101 Classic Firearms: A Chronological Foray into the Golden Years of Firearms Development*, a compilation of the author’s popular articles appearing in *The Blue Press* since 2007. *101 Classic Firearms* is sure to be a welcome and prized addition to the library of any serious firearms aficionado.

Published by Dillon Precision, and printed and bound in the USA, *101 Classic Firearms* is a high-quality full color 11.5” x 9” hardcover with 224 pages packed full of insights and history on some of the world’s most important firearms. About the Author: John Marshall is an accomplished photographer and freelance writer whose articles have appeared in *The Blue Press*, *Gun Digest, Guns & Ammo’s Handguns*, and *American Gunsmith*. An expert on firearms, he is also a member of the Remington Society of America, the Smith & Wesson Collectors Association, the Smith & Wesson Historical Foundation and the American Gunsmithing Association. He is also an endowment member of the National Rifle Association.

Price: L66-40133 $29.95, Autographed L66-97130 $34.95

**Competition Reloading with Brian Enos**

Guides you through a complete step-by-step reloading process for IPSC, Steel Challenge and NRA Bianchi Cup style shooting. Using a Dillon Precision XL 650 reloader with CP brass and CP bullets, Enos demonstrates proper reloading techniques for the most popular loads used by the top shooters. Enos is, of course, a champion himself, winner of the Masters Competition, the NRA Bianchi Cup and a top contender in the USPSA for many years. Run time: 80 minutes.

L66-14341 $19.95

**Making Ammo: A Beginners Guide to Handloading by Kyle Lynch – Ammo shortage? Not anymore! Learn a new hobby that will save you money and ensure that you always have enough of the right ammunition for your shooting needs. This guide offers you an opportunity for first hand information from an experienced reloader as he takes you through the reloading process. Examples explain what works and what doesn’t. If you are new to reloading or want to understand the fundamentals more fully, this guide provides simple step-by-step instructions.**

L66-43270 $23.95

L66-43269 $14.95

**Legally Armed: A Concealed Carry Gun Law Guide**

Learn the basics of concealed carry and the laws associated with this astronomical growing group of self-reliant Americans. If you depend on a handgun for the protection of yourself or your family, arm yourself with knowledge, too. What’s inside? What to consider before carrying a firearm • Protecting oneself: discharging a firearm in self-defense • What to do when interacting with Law Enforcement • Gun handling, practice and storage • State-by-state quick reference guide to carry laws where you live and travel.

L66-43269 $14.95

**Armed & Smart: A Beginner’s Guide to Concealed Carry**

If you are new to concealed carry and need a great resource for information, this is the book for you. This book covers all the basics a beginner needs to know.

Before you make the decision to exercise your Second Amendment right to bear arms through concealed carry, you should consider factors like what type of gun is best for carry, when to carry a firearm, how to carry concealed, and why you should carry a concealed firearm.

We carefully cover handgun safety and the proper steps for using and caring for your firearm. Other topics include cartridge selection, accessories available, practice techniques, and range etiquette.

L66-43232 $16.95

**Armed & Smarter: Advanced Concealed Carry Weapons & Training**

Once you have mastered the basics for carrying your concealed firearm, you need a book to build on that foundation and hone your skills to those of an intermediate-level handgunner. After obtaining your concealed carry permit and securing a firm grasp of the responsibilities attendant to carrying a concealed firearm, it’s time to focus on becoming an excellent marksman.

In *Armed & Smarter*, our authors prepare you, the shooter and gun owner, to handle and use your handgun responsibly. By the end of this book, you will understand the importance of strong habits and perfect practice.

Nobody likes to think about it, but should a serious hunting/shooting accident occur, chances are the drugstore “first aid kit” you have stashed under the seat of your truck won’t do much good. That’s why Cavalry Arms Medical has produced trauma kits designed by Armed Forces medics. The Cavalry Arms Medical P.T.K. (Personal Trauma Kit) contains a 15-gram package of Celox granules to control serious bleeding, Nitrile gloves, a high-intensity Chem-Light, a six-inch Emergency Bandage with a second pad, and a 4.5-inch Kerlix Roll. The A.T.K. (Advanced Trauma Kit) contains one 15-gram package of Celox granules, Nitrile gloves, a CPR Face Barrier, two VioNex Anti-Microbial Wipes, a high-intensity Chem-Light, two 4-inch Emergency Bandages, one 4.5-inch Kerlix Roll, two 2-inch Kerlix Rolls, one 3-inch Elastic Bandage, and two 5 x 9-inch sterile Abdominal Pads. All contents of both kits are currently in use by real-world combat medics.

Cavalry Arms Medical Trauma Kits

N
owadays, it’s easier than ever to be prepared for any emergency. With Wise Company’s 72 Hour Emergency Entrée Kit, you can have a delicious and nutritious meal ready to go in the event of an emergency.
