Coping With the Ammunition Shortage

Page 74

SCAN TO SHOP

Clean, Accurate & Consistent GIVE IT A SHOT!

CLEAN SHOT Clean shot has become a favorite of competition shooters because of its consistency of ignition, efficiency, virtual lack of residue, ease of loading, low smoke and consistent velocity and accuracy. Loads almost all pistol calibers. Popular with IPSC, IDPA and Cowboy Action Shooters.

MAJOR PISTOL Major Pistol is made of a high intensity pistol propellant. The gas generation rate is appropriate for cartridges 9mm, 10mm auto, .257 SIG, .45 Colt light bullet magnum pistol loads and other high intensity pistol cartridges.

ULTIMATE PISTOL Ultimate pistol has no comparable market equivalent. It has a faster burn rate than auto pistol and slower than clean shot. Every manufactured batch is tested for superior ignition in both standard and lead free primers. Perhaps the most versatile of all propellants across the .380 auto, 9mm Luger, .40 S&W, 38 special, 38 Super and .45 Automatic Cartridges.

HEAVY PISTOL Ballistic results of this propellant show its appropriate for magnum pistol applications, 300 blackout supersonic lightweight projectiles and some other specialty ammunitions. In comparison to other magnum pistol propellants we find Heavy Pistol exceptionally clean, accurate with either cast or jacked projectiles and exhibits low muzzle flash.

AUTO PISTOL For loaders interested in attaining standard +P velocities in 9mm Luger and optimized propellant for .357 SIG, as well as correct energy levels for cycling carbines with subsonic load, this propellant is a wise choice. It will also perform well with difficult to cycle .380 Autos, .44 SPL, .45 Colt, Heavy Bullet .40 S&W and some light to moderate bullet .357 magnum loads. It can take your .45 Auto to amazing velocities.

ATTENTION DILLON CUSTOMERS: Because of changes to California's Proposition 65 that took effect on August 30, 2018, companies doing business in California are mandated to provide warnings on products that may expose Californians to any one or more of a list of approximately 900 chemicals, including Lead, which are "known to the State of California to cause cancer, birth defects or other reproductive harm." The new regulation states that a warning must be "provided in the catalog in a manner that clearly associates it with the item being purchased." Though we have no reason to believe our products could cause harm when used as intended, we now include the appropriate Proposition 65 warnings on some of our products to meet the California "safe harbor" requirements.

WARNING: The products offered for sale in this catalog can expose you to chemicals, including Lead, which are known to the State of California to cause cancer, birth defects or other reproductive harm. For more information, go to www.P65Warnings.ca.gov.

Dillon's Bill of Rights for Reloaders

All of Dillon Precision's customers have certain inalienable rights when they buy a reloading product:

1. Right of Quality – YOU THE CUSTOMER have the right to expect a well-designed product, manufactured with quality materials and workmanship that does what the seller claims it will do.

2. Right to Test and Send-Back – YOU THE CUSTOMER should have the right to test the product on your own reloading bench for at least 30 days, and if it does not live up to your expectations, send it back for a full refund.

3. Right of Service – YOU THE CUSTOMER have the right to free, friendly, expert service and technical advice available through a toll-free phone number. This service should include prompt replacement of broken or bad parts – free of charge.

4. Right of Warranty – YOU THE CUSTOMER have the right to a lifetime warranty on any non-commercial-grade reloading product you purchase. *Unfortunately, we can't offer this warranty on textile products and electrical or electronic components.*

5. Right to be Heard – YOU THE CUSTOMER should have the right to speak to someone of authority anytime you can't get satisfaction through normal channels. If our sales representatives aren't able to help you, our supervisors have a mandate to take customer-satisfaction issues all the way to the owner of the company if necessary.

Editor's Note: The Bill of Rights for Reloaders is Dillon Precision Products' customer-satisfaction policy. It remains very much unchanged from the day the company was founded. The disclaimer about textile products and electrical or electronic components reflects the reality of how those products are produced in today's world. Ultimately, our founder recognized that satisfied customers are our best advertising, and the only thing that differentiated his company from all the others at the time was the warranty and customer service he offered. We constantly strive to live up to his standards. Please let us know if we're not succeeding.

Rapid Trim 1500 Case Trimmer[^]

Dillon's
RT 1500
shown
installed
on an
XL 650.

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (Vacuum cleaner and hose not included.) The RT 1500 is equipped with a quick-

disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer **62164** is **\$374.99**. (Available only in 110 volt 60 hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, **13141**, are **\$21.99** each. Upper lock rings, **13559**, are **\$7.99** each.

MILITARY BRASS?

**Eliminate the "Grunt Work" with
Dillon's Super Swage 600**

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

Case Preparation Equipment

Vibratory Case Cleaners Case/Media Separators

CM-2000 Case/Media Separator [^]	20675	\$84.99
CM-500 Case/Media Separator [^]	21045	\$52.99

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is one of the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour. Not only is our capacity greater than most, but our motor is also larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine! The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media. We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners. The solution was an injection molded reversible part. Simple, and it works

great. Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench. It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon created the CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit. Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

Blue Press 7

The \$144.25 Redding vs. the

By John Kleespies

Since I've started writing articles for *The Blue Press*, I've taken a hard look at my reloading equipment with an eye towards determining what should work best and why...and then thoroughly testing it. A question that I've been asked many times over the years is which seating die I recommend for my machines. My typical answer has been the Redding Competition Seating Die, as I appreciate the ease of its micrometer adjustment when switching between loads and...well...at a \$144.25 MSRP, it just makes sense that one of the highest-priced dies on the market should provide the highest quality results...right?

Indeed, I've used the Redding for years on both an RL 550B and an XL 650, and I'll come right out and say that it's a fantastic die. That said, while the micrometer adjustment is a huge plus, it's a benefit that has more to do with ease of use rather than actual results.

And then entered my new RL 1100 a few months back. This machine came set up in 9mm straight from the factory, and I noticed that its finished rounds were the best I've ever produced. Granted, this should be expected from as high-end a machine as the 1100, but it also made me wonder if it might have something to do with the Dillon dies.

So, as I'm wont to do, I set up a head-to-head experiment to test the seating depth consistency of the Redding versus the Dillon seating die.

Before going any further, I have to make an obvious comparison here: if there's ever been a David vs. Goliath comparison, this is it. Not only does the Redding's size dwarf the Dillon while sitting side-by-side

on the toolhead, but the two prices are worlds apart. The Redding's manufacturer list price is over five times what dillonprecision.com asks for their version of a seater. Considering the vast price difference between the two dies – even after adjusting for “street prices” from retailers – if the Dillon was merely able to break even in the OAL department, I'd consider that a win for Dillon's little seater.

While planning this experiment, I wanted to rule out equipment variances as much as possible, so I stripped down my RL 550B and mounted both dies on the same toolhead. I then planned to load and press the bullets in pairs – in this way, each round was measured one-for-one off the same handle stroke. I also decided to save crimping for after the OAL measurements in order to remove any variance that a crimp die may enter into the equation.

On the components end, I managed to secure several hundred pieces of once-fired SIG brass and, more importantly, fresh bullets from the Zero Bullet Company. As everybody who is reading this is aware, finding quality components these days constitutes a minor miracle, and Zero did me a big favor by expediting a box of bullets my way so that I could conduct this experiment.

I specifically wanted to use Zero 147-grain Jacketed Hollow Points because I've enjoyed their products for enough years to know that their bullets are admirably consistent. Without consistent bullets to measure, my data would quickly become junk. Well, that, and I've got a sweet Pistol Caliber Carbine load that uses Zero 147s, and landing some more of those

8 Blue Press

800-223-4570 • dillonprecision.com

\$27.99 Dillon Seating Die!

in my range bag is a pretty big plus!

For brass prep, I wet-tumbled the SIG once-fired with steel pins, and then I ran them through my RL 1100 for sizing, swaging, priming and powder. At that point, I pre-emptively pulled the brass from the machine and staged them in separate reloading blocks in three 50-round batches. One of the batches was for prep purposes, whereas the other two sets of 50 were destined to run through the Dillon and Redding, respectively.

As previously mentioned, for each draw stroke, I placed one round in Station 1 for pressing with the Dillon die, alongside another round in Station 3 for pressing with the Redding. After seating each bullet, I also used a permanent marker to number the brass of each round in the event that, after recording their OALs in my spreadsheet, I could easily locate them if I had any that were far enough off in measurement to deserve special analysis. This turned out to be a great choice, as I did have one Dillon round which measured several hundredths taller than the rest, and upon examination it turned out that the case was split. That round was tossed, along with the corresponding Redding round, and two fresh rounds were substituted in their places. I also used the numbering system to verify the lengths of the rounds which fell at the extreme ends of the ranges.

The overall-length measurements were collected with digital calipers and a Hornady comparator. For each die, I based my original measurement zeroed off the first round loaded, but once the numbers were all entered into my spreadsheet, it was an easy matter to find the median within the individual ranges. For reporting purposes,

I then adjusted the numbers around the median in the accompanying chart.

As can be seen, Davey not only defeated Goliath, he kinda humiliated him in the process.

The extreme spread was slightly smaller for the Dillon than the Redding, which in and of itself is enough to declare victory in this experiment. More importantly, though, the standard deviation was a mere .0008 for the Dillon, while the Redding posted a .0013 SD.

To be honest, these numbers didn't surprise me at all. The Dillon die is as simple a design as can be imagined – it's basically a solid hunk of steel. The Redding, on the other hand, uses a sliding sleeve and spring to seat the bullets. Placing my thinking cap upon my head, it didn't take much hypothesizing to extrapolate that a sleeve and spring were going to introduce more variance on OAL than a solid die.

The advertised purpose behind the Redding's complexity is to better align the bullet to the case, an advantage that I admittedly have no way of measuring...and frankly it's a purpose which doesn't make much of a difference to me and my 9mm pistol rounds. Now, for a rifle firing a thousand yards, I'll leave that for somebody else to figure out, or maybe for a future article from me. What I do know right now, however, is that if I'm confident in the OAL of my 9mm ammunition, then I'm more confident in its ability to reliably feed through my autoloader. For a competition speed shooter, reliability is no small matter, and that's why I emphasized OAL in this test.

So, there you have the data to back up my hypothesis leading into this David versus Goliath showdown...and you have the data that backs up my

faith in Dillon Precision's seating die.

Dillon's Benchtop Mounting Plates

62005 \$89.99

As seen in the Dillon videos, these plates bolt directly to your bench top, and are drilled and tapped to allow mounting your reloading machine (and loaded cartridge chute if necessary) directly to the top of the mounting plate.

One mounting plate (**Stock Number 62005**) is drilled and tapped to accept the following loaders: XL 750, XL 650, RL 550 and Square Deal "B". The other mounting plate (**Stock**

62006 \$89.99

Number 62006) accepts the following reloading machines: RL 1100, CP 2000, Super 1050 and RL 1050. Additionally, it accepts any Dillon reloading machine that is *mounted on the Dillon Strong Mount*, including the XL 750, XL 650, RL 550 and Square Deal "B".

The plates measure 9-3/4" x 11-3/4" x .375" thick, and plate mounting hardware is included.

"Border Shift" Ammo Bag

Dillon's two-compartment ammo bag is constructed with a flexible inner liner that will allow the entire volume to be accessible from either zippered opening. You'll never again mix fired brass with loaded rounds!

Mr. Bulletfeeder[®]

by Double-Alpha

Mr. Bulletfeeder has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy – a world leader in practical-shooting-related product manufacturing and distribution – at the helm. The design allows the bullet collar to be mounted onto the casefeeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

DILLON

HP1 Electronic Hearing Protector

- Protection Rating NRR 21
- External battery compartment
- Auto shut off extends battery life
- Extra-deep, replaceable ear pads
- Separate volume controls
- TRUE stereophonic sound
- Collapsible for ease of storage
- One-year warranty on electronics

Dillon's HP1 Electronic Hearing Protector amplifies weak sounds while at the same time blocking out loud, harmful noise. During loud noises, the HP1 maintains a comfortable level of sound transmission – HP1 Hearing Protectors are designed to never completely shut off. The Dillon HP2 Folding Hearing Protector is comfortable to wear for extended periods and folds for easy storage when not in use.

PRIMER FLIP TRAY

A heavy, high-quality tray large enough for the Federal primer package. **13606, \$23.99 ea.**

Dillon Die Sets

Sizing/Depriming Die (Pistol)

Our sizing/depriming dies feature a "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design is the long, tapered carbide ring with a radiused opening. That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die (Pistol)

Our quick-disassembly seat die allows the user to disassemble and clean the seating die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem. Dillon's double-ended design makes it simple to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time.

Crimp Die (Pistol)

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

Spare Decapping Pins

Package of 10	21528	\$7.99
---------------	-------	--------

Sizing/Depriming Die (Rifle)

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die (Rifle)

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die (Rifle)

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Dillon's Basic Loader

\$319⁹⁹

15399

Reloading Dies and Caliber Conversions sold separately
Pictured with optional accessories:
Strong Mount 22051 \$84.99

Dillon's RL 550 has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles. The BL 550 is essentially an RL 550 without the automatic priming and

powder systems. Capable of loading over 160 calibers – just like the RL 550 – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550 loader! The interchangeable toolhead (Page 26) makes it quick, easy and inexpensive to change calibers.

AUTO PRIME SYSTEM[^] 16627 **\$104.99**

PRIMER SYSTEM EARLY WARNING[^]

Allows you to focus on loading instead of worrying about failing to seat a primer, and is an easy slip-on attachment to the auto prime system.

BECOMING AN AMERICAN GUNSMITH

Your Path to Personal Freedom and Financial Security

GENE WAYNE KELLY

1-800-797-0867

If You want to Become a Gunsmith You need to read this book!

LEARN HOW YOU CAN BECOME A CERTIFIED GUNSMITH!

Becoming an American Gunsmith shows you a path to follow to become a Certified Professional Gunsmith, without having to give up your lifestyle, income, leave home, or spend tens of thousands of dollars attending a campus based school.

Mr. Kelly details how mastering the Design, Function, and Repair (DF&R) training concepts revealed in this book will enable you to maintain, repair, build, and customize firearms as a Certified Gunsmith.

This information will provide you with the ability to follow your passion of working on firearms and ensure your personal freedom and financial security. Included:

- How to set up your shop
- Numerous suggestions and resources to help you establish a successful gunsmithing shop.
- What tools and equipment are *really* necessary

Read this book and learn how you can be a Certified Gunsmith, protecting and participating in the ongoing history of firearms in America.

New Release Sale! Reg \$14.95 plus s/h

4 Small	20049	32.99

Dillon's **"Belted Magnum" Powder System** features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

97126 \$179.99

The **Powdercheck System** (available for XL 750/650 and Super 1050 reloading machines) sounds an alarm if the powder charge in a round is out of limits either high or low.

21044, \$74.99 each
Three or more, \$68.99 ea.

An **Aluminum Roller Handle** gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

17950 \$52.99

Dillon's **1" Bench Wrench** fits our 1" Die Lock Rings which give you more space on the toolhead.

10842, \$12.99 each
Two or more, \$11.99 ea.

Our **Machine Maintenance Kits** come with everything you need to keep your Dillon loader cleaned and lubricated up to factory specifications. Available alone or in combination with a spare parts kit for your machine.

Maintenance Kit Only	22211	\$33.99
w/SDB Spare Parts Kit	97015	39.99
w/550 Spare Parts Kit	97016	37.99
w/750 Spare Parts Kit	97500	58.99

RF 100 Automatic Primer Filler

The **RF 100 Automatic Primer Filler** eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run! In about two minutes the primers are inside the protective metal housing.

<i>(Incl: RCBS steel size, expander, seat/crimp)</i>		

Lyman Neck Expander Die

Improves accuracy of cast and jacketed bullet reloads. Extends case life. A "Must-Have" die for the cast bullet or flat-base bullet user. The first step expands the inside of the case neck to just under bullet diameter for precise case neck tension in the finished reload. The second step expands the case mouth to bullet diameter or slightly over. This allows the jacketed or cast bullet to be started perfectly centered in the case mouth and properly aligned with

the axis of the case neck. By adjusting the plug slightly deeper, the second step also provides a slight flaring of the case mouth for reloaders using cast bullets.

Dillon AkroBins[^]

AkroBins are ideal for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550/XL 650/750 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Dillon Utility Boxes[^]

Dillon's Utility boxes are ideal for all those accessories that don't quite fit into the compartments of your shooting bag. The large box measures 13-1/2" x 5-3/4" x 2-1/4" and the small box measures 4-5/8" x 6-3/8" x 1-5/8". Use them for cleaning gear, extra magazines, repair parts, first aid supplies, reloading accessories and tools – the list is endless.

Shellsorter

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

UNDERSTANDING

**ROB'S
ON
POINT**

YOUR INTUITION

By Rob Orgel, Photos by Offensive Marketing Group

Intuition is that little voice in your head telling you something isn't quite right. We all have it, but are we "in tune" to it? In the moment, you might have a feeling that something is a bit off, but don't quite know what it is. Later, you understand what it was, but it might be a bit too late.

Think back to a time when something was amiss, and a few hours later you knew what it was. As we tell the story, we understand in hindsight. It's possible to bring hindsight into tomorrow, trusting our intuition so we'll understand why the flag is going up.

What is Our Intuition Telling Us?

Very often, our eyes see something our brain hasn't comprehended yet. What we've taught our brain is important. For example, let's say we've opened the refrigerator door looking for milk. We either see milk or we don't. What your eyes see that your brain doesn't quite comprehend – yet – is last week's Chinese takeout. Later that day we get the odd feeling that it's time to clean out the fridge!

Applying this to a potentially dangerous situation involves having a weird feeling about an acquaintance or coworker. Your brain doesn't know what it is yet, but your eyes see that he blocks the doorway when he talks to you. Your ears hear that he brings in things off topic to the conversation. Later, your brain decides that you don't trust him. But that might be too late.

Changing the picture of what's to come, let's understand what intuition is saying to us. What is the intention of our intuition? It has NO interest in deceiving us and is fully invested into our preservation. If intuition

had a theme song it would be the dark, ominous tones of the soundtrack of a horror movie foreshadowing an attack. Even if we don't know who the attacker might be, our guard should be up.

For example, let's reflect on our own experience. Do you remember that old acquaintance, coworker or classmate – the one who ended up in trouble with the law? Were you not surprised that he found his way into trouble? Did you know in advance that he was trouble? Or was it just an unexplained feeling? As we reflect on these moments, we all too often find that lack of clarity – just a "feeling."

Make it a Point to be Rude

To paraphrase an old adage often attributed as a quote by Thomas Jefferson: In matters of style and trends, flow with the current. In matters of morals and safety, stand like a rock. What that means to us is that no one cares more about your safety than YOU. So, be vocal, pronounced and even rude if you must.

Coming back full circle, when the guy from work who gives you that weird feeling asks to accompany you to your car after a late night at the office, LISTEN to that voice of caution that hasn't quite come into words yet. That premonition of trouble is telling you to get out of the situation. Tune into your intuition and don't hesitate to be rude.

Bad people have always leaned on the societal needs of their victims to "not offend" or to "be polite." NOT when it comes to your safety. Again, don't hesitate to be rude. Don't cater to the emotions of a person you don't trust. Be vocal, be loud and attempt to draw the attention of others.

What is the intention of our intuition? It has NO interest in deceiving us and is fully invested into our preservation.

Real Avid Master Sight Pusher™

The Master Sight Pusher is a professional-grade tool that makes quick work of changing pistol sights while protecting both gun slides and the sights themselves. Heavy-duty, built to last and smartly designed to work on most any modern pistol sights. The oversized, ergonomic Easy Torque™ Handle partners with extra-fine drive threads to provide maximum torque with minimal effort when removing or installing sights. The Universal Press Block features multiple contact surfaces for almost any size and style of press-fit dovetail slots and sight profiles. Adjustable non-marring contact surfaces securely hold both 1911 and flat-bottom pistol slide styles.

Sack-Ups Protective Gun Sacks

Sack-Ups Protective Gun Sacks protect your firearms from the dings and scratches that tend to happen when you're rifling through your gun safe looking for...well...your rifle. They don't take up as much room as a gun case, but provide just enough padding to keep your guns safe...in your safe.

HYSKORE Six-Gun Modular Pistol Rack

The HYSKORE Six Gun Modular Pistol Rack is constructed from closed-cell, non-reactive foam

that will not absorb moisture or react with lubricants or solvents. It has a soft, suede-like finish, but is rigid enough to offer firm support. The modular feature of the rack also means that two or more racks can be connected together and reconfigured to take maximum advantage of all available space in your safe or vault. The rack measures 11-1/4" wide x 7-1/2" deep x 6" high.

PRODUCTION TO CUSTOM

Nighthawk Custom 1911 Drop-In Trigger System

When looking to upgrade the performance of a pistol, the most common improvement sought by shooters is a high-quality trigger job, with a crisp clean break.

Never has a high-quality trigger job been this simple for the 1911. The Drop-In Trigger System (DTS) is designed for use in most 1911 and 2011 models and allows for an approximately 3.5-3.75 lb trigger in minutes. Available with a stainless or black nitride hammer.

All internal components are Fully Machined from bar stock 416 stainless steel.

Nighthawk Custom Drop-In 1911 Trigger System

When looking to upgrade the performance of a 1911 pistol, a common improvement sought by shooters is a high-quality trigger job, with a crisp, clean break. Until now, a high-quality trigger job has never been in the realm of a "drop-in" upgrade. Nighthawk Custom has changed that with the introduction of its Drop-In Trigger System (DTS) for 1911 pistols.

An all-in-one unit, the DTS replaces your existing hammer, hammer strut, sear, disconnector, and sear spring. Your existing sear pin and hammer pin will be retained for use with the DTS, but no other parts are necessary for installation. With a steel housing securing the unit, the DTS features all Fully Machined™, stainless steel internal components. The traditional three-pronged sear spring is no longer necessary as the springs for the disconnector and sear are built into the unit. A single-leg grip safety spring is included with the DTS to replace the existing sear spring.

The DTS is designed for use in most 1911 models, and installation is simple enough that minimal gunsmithing skills are necessary.

"Guns. Lots

The Ultimate Gun-Shopping Experience?

of guns."

By Charles M. Strauss, Photos by Bobby Bushcraft

"The Vault," in Mesa, Arizona, is not just a gun store. It's a new kind of gun-shopping experience. The owner, Clyde Helquist, proprietor of the venerable Pistol Parlour since 1979, was inspired by the showrooms of bespoke rifle and shotgun makers like Holland & Holland and Purdey.

He wanted to create a similar atmosphere, but for high-end "tactical" firearms, like Wilson Combat, Nighthawk Custom, Staccato [formerly STI], Noveske and FN Herstal.

The embossed-metal ceiling with the decorative mortices, the leather-upholstered chairs, the dark wood furniture and the subdued chandelier lighting with illuminated display cases give the impression of a luxury jewelry store. (Think Tiffany & Co. not Zales!) Cinephiles will recognize the strong resemblance to the gun vault depicted in the "John Wick" movie series, even including an extremely realistic *trompe l'oeil* vault door on the back wall, rendered by the very talented and creative Bob Olsen of Olsen Painting. The store manager, Eddy Rodriguez, dresses similarly to the concierge at "The Continental" with a black suit, black shirt and black necktie.

If you're going to buy an expensive gun, you don't just want to look at pictures on the Internet; you want to hold it, and inspect it, and see how it feels in your hand. To that end, The Vault does not just have a couple of Wilsons or Nighthawks in stock; they have dozens of Wilsons, dozens of Nighthawks, dozens of CZs, a wide selection of 2011s and Zevs, and a large selection of

other top-of-the-line guns to help you decide which one (or which half dozen) you just can't live without. (Oh, yes; they have the best blades, too.)

The inventory also includes guns identical to the ones used by John Wick in his movies, including Taran Tactical Glockes with slide-lightening cuts and Ion-Bonded barrels. Some people want to own a gun "just like John Wick's." OK, I get that. How many Walther PPKs did James Bond movies sell? How many S&W Model 29s did Dirty Harry movies sell?

The question always comes up: "Who needs an expensive gun?" Wrong question. America is not a country of needs (so far). In socialist countries, as envisioned by Biden's puppet-masters, all anybody "needs" are some gray pajamas and a bowl of (organic earth-friendly) rice. America is a country of wants (so far).

OK, so why does anybody want an engraved Wilson 1911, or a Korth revolver?

- They want a gun like the one(s) used by the latest action hero, whether it be John Wick, James Bond, Dirty Harry, or whoever comes along next.

- They like to own beautiful things; and they can afford beautiful things. (Why does Jay Leno own hun-

dreds of beautiful cars? Because he likes beautiful cars, and he can afford them.)

- They like to own beautiful things which they can barely afford, but they work hard and make sacrifices to own beautiful things.

So, what's the typical customer who comes to The Vault looking for in a firearm? Store Manager Eddy Rodriquez summarizes it in four words: quality, performance, reliability and accuracy.

"Note that a Taurus 1911 and a Nighthawk Custom 1911 are both similar guns, yet the Nighthawk costs seven times the amount that the Taurus does. Is the Taurus a bad gun? No, but it does lack a lot of the refinement and quality you gain when you buy something like a Nighthawk," Eddy explains.

"Only the best parts are used when building a Nighthawk. One gunsmith builds the gun from the ground up and stamps his initials into the frame, laying claim to building that gun. Every single one of those 49 parts – made up of a forged slide and frame, bar-stock parts and a match-grade barrel – is fitted by hand. There are no cast or MIM [metal injection molded] parts in a Nighthawk Custom gun. So...why is it

seven times more expensive? *That's* why. You'll own something you'll be proud to own and want to pass down generation to generation.

Eddy continues, "A Timex or Citizen wristwatch tells the same time that a Rolex or Patek Philippe does, but why do the Rolex and Patek Philippe cost so much more? It's simple. Quality. Is a Rolex or Patek Philippe for everyone? No. They're for those who enjoy the attention to detail and the overall feeling of joy they get when they put on such a watch."

Apart from the guns themselves, some people just appreciate a more refined gun-buying experience. The sales staff at The Vault are not trying to pressure you into buying a gun so they can move on to the next customer. ("What will it take to get you into this gun today?") Rather, they are there to help you find the gun of your dreams, and hopefully, to establish an advisory relationship that will make you want to come back and do business with them again. They strive to be like "gun sommeliers," or "gun tailors," (referencing John Wick again), helping you and guiding you to make the perfect choice.

And aren't we all looking for the gun of our dreams?

Real Avid Level-Right™ PRO

A level reticle is critical to long-range accuracy. For longer shots a canted reticle will pull or push a bullet's trajectory off of vertical center. It gets worse the more the distance increases. A level scope means that

the reticle will be perfectly aligned with the rifle bore. Balancing small levels on a scope turret and gun receivers has been a commonly accepted practice for years. Not only is this a clumsy process, it's wrong. The turret on most scopes is not perfectly aligned with the reticle, so even if your turret is level to the gun, your scope may not be. Level-Right PRO changes all that by simplifying scope alignment in four easy steps. Accurate and intuitive, this timesaving instrument quickly aligns the actual scope reticle to the horizontal gun plane, which is key to the long-range accuracy of your rifle. Level-Right PRO helps you quickly and confidently mount a scope for maximum accuracy.

Level-Right PRO 21777 \$69.99

The HMB Bolt

Young Manufacturing is the licensed manufacturer of the HMB bolt. The HMB Bolt by HM Defense eliminates the pass-through cam-pin hole and replaces it with a cam-pin socket and radiused cam-pin design. The new patented design eliminates the natural weak point of Mil-Spec bolts by significantly increasing the amount of metal (and strength) at the cam-pin location. The result: **NO MORE BROKEN BOLTS!** The HMB Bolt also reduces contact between cam pin and firing pin, enabling smoother operation of the firing pin, bolt lugs and aft gas rings. The new cam-pin socket also retains lubrication for extended operations. Comes with a phosphate cam pin.

HMB Bolt

66680

\$99.99

Young Manufacturing's **Upper Receiver Vise** holds any AR15 upper receiver regardless of the manufacturer. Since it supports the receiver from the inside, the outside dimensions are of no concern. Made from aircraft-grade 6061 T6 aluminum and anodized to MIL-A-8625 Type 3 Class 2.

YM Upper Receiver Vise

66679

\$34.99

Slip 2000 Products

725 Gun Cleaner Degreaser should truly be called Super Degreaser. This water-based cleaner will cut through the toughest cosmoline, carbon, grease and grime! Its super strength allows it to degum and degunk the dirtiest of gun parts when sprayed on or used in parts washers or solvent tanks! **NOTE:** To help prevent rusting, users must apply a gun lubricant immediately after cleaning to disperse any moisture in parts.

16 Oz. 19237 \$21.99

Slip 2000 **Carbon Killer** provides you with a safe, effective way to clean carbon, lead and plastic wad fouling. Unlike other gun cleaners, this product is non-flammable, non-hazardous and biodegradable. Designed for soaking metal parts with baked on carbon, Carbon Killer dissolves carbon and lead on contact. **NOTE:** Carbon Killer is for cleaning internal metal gun parts with baked on carbon by soaking them. It is an aggressive cleaner and should not be used to clean the outside of your gun. It can damage and even remove some finishes.

16 Oz. 19234 \$21.99

Slip 2000 **Extreme Weapons Lubricant (EWL)** was designed for use on chain guns and machine guns like the MP5 and the 249SAW. It contains a proprietary Anti-wear agent that reduces friction and wear by 90-95 percent. It is an excellent CLP and is able to clean, lubricate and protect.

4 Oz. 11644 \$18.99

Slip 2000 **EWL30** has the same properties as EWL, except it is a lot thicker. It contains a proprietary thickening agent that makes this lubricant consistency like a 30-weight motor oil. It was designed for those who want or need a lubricant that will not migrate at all and don't want to use a thick grease.

4 Oz. 11645 \$18.99

Slip 2000's **Extreme Cleaning System** contains 2 Oz. bottles of: Carbon Killer Bore Cleaner, 725 Gun Cleaner Degreaser, and EWL Extreme Weapons Lubricant.

11652 \$25.99

Slip 2000's **AR Cleaning System** contains a 7 Oz. bottle of Carbon Killer Bore Cleaner, a 15cc syringe of Extreme Weapons Grease, and a 1 Oz. bottle of EWL Extreme Weapons Lubricant.

11676 \$19.99

Slip 2000 **Copper Cutter** is specially formulated to remove copper, lead, powder residue and plastic wad fouling from bore surfaces with little scrubbing! **NOTE:** It is a water based, ammonia enhanced product and will remove all lubrication or oil protection, so always re-lube all parts cleaned.

4 Oz. 11646 \$11.99

Each Slip 2000 **Gun Wipe** packet contains one 5" x 8" wipe treated with Slip 2000 Synthetic Gun Lube. Perfect for wiping your guns down after a day on the range or while out on a hunt. Apply to all metal surfaces. Great for light carbon cleaning. Safe for all firearm stocks and grips.

20 Pack 11674 \$14.99

TW-25B is the choice of leading firearms manufacturers, armorers, pro shooters and gun enthusiasts, and is recognized as the world's best all-purpose weapons lubricant/protectant. It is now widely specified by the U.S. military for their most critical performance weapons systems. Environmentally safe, non-carcinogenic, non-ozone-depleting.

Justified Defensive Concepts, LLC Multi-Use Training Target

Shooters who compete in several disciplines can now use one target to practice USPSA, IDPA and ICORE or train with various dot-torture and bulls-eye arrays. The National Target Company, Inc. is offering the Justified Defensive Concepts, LLC Multi-Use Training Target. Sized 22.5" x 35" on light-weight paper, this target's versatility is almost unparalleled for handgun, pistol-caliber carbine and rifle training or practice. It comes in a package of 50 targets and just might be the **ONLY** target you'll need for your shooting session.

11713 \$19.99

Shoot Out Targets

The Alpha Target is Shoot Out Targets' Patent Pending instant-reaction target system that can be reused again and again to improve your marksmanship. All Shoot Out Targets are made of durable cardboard that has been tested to withstand 1000-plus shots. Unlike clay pigeons that can only be used once, the **Foam Medallions** are durable and able to self heal for longer-lasting use, allowing for up to 40-plus shots per medallion. Each foam medallion is 3" in diameter and 1/2" thick. With the easy-to-see foam medallions you will get an instant kinetic reaction with every hit. Shoot Out Targets are proudly made in the USA, reusable for hours of fun and can be used with all-caliber firearms and airguns. The target stands 43" tall and 22" wide when assembled.

Coping With the

By Oleg Volk

Shortages suck. Having lived in the USSR until 1989, I am well familiar with them. Shortages are caused by various factors, mainly prices lagging behind a rise in demand, and by government prohibitions on making or transporting products or their precursor materials. We have all those causes at work now, with one of the worst ammunition droughts in history. While 50 rounds are plenty for a daily carry loadout, training new shooters or improving a facet of an existing skill set can easily require hundreds of rounds. Breaking in a new firearm and verifying its reliability can take nearly as much.

The most obvious solution is to buy in bulk whenever ammunition is available cheaply. That approach was especially helpful back when military surplus was being dumped at fire-sale prices. This does presuppose a foresight as to what future needs will be: imagine stocking up on 8mm Mauser and then running out of 9mm Luger, just like I did because 9mm pistol cartridges were used extensively for training new shooters and 8mm rifle ammunition wasn't. On the plus side, if your go-to rifle is a .308 and a 7.62x54 isn't, using up a less-precious caliber for training saves the primary caliber for hunting or defense. "Buy it cheap, stack it deep," also fails if pricing on a particular caliber turns into an upward trend instead of regular cycles. Dollar-cost averaging, typical of stock and mutual fund purchasing strategies, helps with that issue: just spend a fixed amount of money annually, buying whatever amount that covers.

As the odds and ends of the importers' and personal collections get dragged out of the attics and the closets, it's worth considering that some ammunition is worth more as collectibles than as gun fodder. Properly stored, ammunition can last for decades. Improperly stored...third-world surplus from hot climates can be somewhere between unreliable and hazardous. Some

importers test their stock for case splitting and overpressure, some don't. Cleaning after corrosive primers is straight-forward, but other hazards can lurk in every round of Trashcanistan's Finest Surplus, from hangfires to detonations. Whenever possible, use the strongest action available for test-firing suspect ammo, and use a chronograph to verify that the performance is consistently within the realm of reason. No point in saving a few bucks to buy old blasting fodder just to lose a gun or the fingers holding it! And this caution applies even to new-production ammunition: as manufacturers rush production, quality control can slip. A case-chamber-

ing gauge will verify that the external dimensions are right, avoiding a cartridge stuck halfway into the chamber of your carry gun. When buying defense ammunition, remember to budget for a few rounds to make sure the load cycles reliably in your particular sidearm.

Eventually, ammunition stocks of particular calibers can run low no matter what you do. Does anyone still have a stash of .25-20 Winchester or 11mm Mauser? The solution to that, outside of rimfire calibers, is to reload. Since reloading components aren't free, how does that help? Reloading can be more flexible than buying complete cartridges because you can purchase more components than loaded ammo for the same money. Only

when the need arises, will you have to add the other component of value, namely your time and expertise. Cartridge cases can be reused. Further, the same cases, primers, and powder may be used for a variety of loads, depending on the current need. For instance, subsonic or supersonic 9mm can use the same components, other than the bullet. Similarly, .38 Special and .357 Magnum can share every component but the brass. Depending on what's in short supply, lead or powder may be emphasized in the load, with either a heavy bullet using a modest charge, or the lightweight screamer using more powder. Better yet, more compo-

Ammunition Shortage

nents for the more-obscure calibers are often less affected by the swings of the public mood and shopping habits.

Reloading also helps with the consistency of available ammunition. It's unlikely that the same lot or even brand of ammunition would be available at reasonable prices from month to month. Your own reloads can stay constant in recipe and performance for years. A minor point for pistol ammunition, it's a major advantage for precision rifle shooters. Not only the powder, crimp, seating depth, and every other detail of assembly can be repeated, but the reused case comes fireformed to the specific rifle chamber!

Not everyone has the ability to reload or to buy in bulk, same as not every shooter has been around long

enough to make stashes for the future. What's a newly minted practitioner of the Second Amendment to do when the price of consumables makes regular practice cost-prohibitive? Nothing other than live fire can replicate the recoil or the report of the firearm, but a rimfire or a pellet-shooting pneumatic copy of the sidearm can go a long way to familiarizing the user with the manual of arms and the trigger. If a safe backstop for those is unavailable, a cardboard box filled with scrap paper or bubble wrap suffices for much less energetic Airsoft. For enhanced dryfire practice without projectiles at all, laser "cartridges" are available in several popular calibers. These are especially useful for training timid, noise-averse new shooters prior to moving them to real guns.

Testing Your Handloads

By Oleg Volk

Commercial ammunition tests are widely available. Do a keyword search for "Amazing Ammo .357 Mag. 158-grain JHP" and you will find accuracy reports and photos of terminal results. Your own ammunition can be a mystery. Testing can be done easily with two useful tools: a chronograph and a block of ballistic gel.

Lab Radar provides more precise results than the simpler gap-based models. Besides muzzle velocity, it also gives numbers for various distances downrange. Front those numbers it also calculates the true ballistic coefficient of the projectile used. That way, you can have a more accurate drop and wind-drift data, as well as an idea of how far downrange your bullet goes transonic. Equally importantly, it will show any undue variations in velocity indicating a problem with the batch of handloads. Being able to anticipate accuracy-destroying inconsistencies without driving to the long-distance firing range saves time and material. A 10-fps standard deviation (SD) in velocity is not a guarantee of perfect results downrange, but a 105-fps SD pretty much guarantees wide dispersion. Being

able to tell bad loads in advance is as valuable as documenting the winning recipes.

Ballistic gelatin or the more convenient Clear Ballistics synthetic gel is equally useful for figuring out just how a bullet performs in meat. While superb results from a homogeneous gel block, even if covered with fabric or fur for veracity, do not guarantee perfection on a hunt or in a defensive fight, negative results tend to be conclusive. For example, it turns out that the brass-cased 3-inch shell launching a 750-grain slug at 1900 fps from a rifled shotgun doesn't "penetrate enough to stop a medium dinosaur." Actually, it fragments violently inside of about 8 inches of gel. Similarly unexpectedly, a 40-grain .22 Long Rifle round nose bullet from a rifle goes all the way through a 16-inch block and escapes out of the back! A .44 Magnum 240-grain JHP works great from a revolver but fragments completely when handloaded for maximum velocity from carbines. That works well for self-defense but poorly for harvesting edible venison. Theoretical performance is one thing, but reality doesn't always conform. Do your own testing!

The Firearms Academy of Seattle's Handgun Master Test Practice Day

By Duane Thomas

I recently attended the Firearms Academy of Seattle's [firearmsacademy.com] Handgun Master Test Practice Day. This was something for which I lobbied hard. FAS had always before made the HMT part of a multi-day class costing hundreds of dollars to attend, then on the last day they ran people through the test. I thought there would be significant interest in a version that was just the test, requiring only one day to shoot, at a much lower cost.

The Handgun Master Test was designed by Marty Hayes, headman at FAS, to be a measurement of the skills he feels might realistically be required for self-defense. As he put it, "I didn't want it to be impossible, it should be something that some people can do. But it shouldn't be something just anyone can do."

There have actually been four versions of the HMT over the decades. I have shot, and passed, them all. There are five drills on the current version. They are:

Drill #1: Accuracy. At 15 yards, draw and fire six shots, all six must hit inside the A-zone. Time limit is 30 seconds.

Drill #2: Multiple Targets/Reloading. At 7 yards, draw, fire one shot on each of three targets, slidelock reload, one shot on each of three targets, slidelock reload, one shot on one target. Time limit is 12 seconds for an autopistol, 18 seconds for a revolver. Do twice, all 14 shots must be inside the C-zone.

Drill #3: Moving Target. At 7 yards, the target starts concealed behind a barrel then moves laterally until it disappears behind another barrel. Distance between barrels is six yards, exposure time is 3.0 seconds. Two passes, one left-to-right, one right-to-left. Draw and fire three shots per pass, all six shots must be inside the A-zone.

Drill #4: One-Hand Only. At 4 yards, two strings. Draw from the holster and fire six shots with the master hand only. Then from Low Ready, fire six shots with the support hand only. Time limit for each string is six seconds. All 12 shots must be inside the A-zone.

Drill #5: Low Light. Inside the FAS dark house (well, actually they have two) with light so low you can barely see the targets, at 5 yards, draw and hit three targets with one shot apiece, time limit is 3.5 seconds. Four reps, 12 shots total, all 12 bullet holes must be inside the C-zone.

Prior to the test, I had ample time to obsess over which gun I was going to use. It's part of my tradition, I always shoot the HMT with a different gun. I really am making things harder on myself than they actually need to be. Prior to this, I had passed the HMT six times, with, in order: Gen2 Glock 19; Gen3 Glock 17; Rock River Arms Limited Match Pistol (1911 .45); Wilson 30th Anniversary

Model (1911 .45); Wilson EDC X9; and a Gen4 Glock 17 with Delta Point Pro red dot.

So that ruled out a lot of great guns. I put together an obsession-level test program reducing overall performance down to one number i.e. hit factor, then cracked open the gun safe. When the gunsmoke cleared, I chose for my next rep of the Firearms Academy of Seattle's Handgun Master Test my Langdon Tactical Technologies custom Beretta 92FS. [langdontactical.com]

Of the 10 class attendees at the first-ever Firearms Academy of Seattle Handgun Master Test Practice Day, four were what Belle McCormack at FAS called "my people," i.e. people I had invited. "You'll love it, it'll be SO cool." We could actually count that as five if we wanted to consider me as one of my people. By the time you feel ready to pit yourself against the Handgun Master Test, you're pretty darn good, the overall skill level of aspirants was high. When all was said and done, five of 10 people trying actually passed the Handgun Master Test, three of whom were my people. Yes, I was one of them. In fact, this was only the second time I've ever passed everything with only one rep per, with no need to reshoot any drill even once.

My previous all-first-time-passes had been with the Glock 17 fitted with a red dot sight, and I gave a lot of credit to the dot, especially on the mover. This rep, with the Beretta, I have never shot the mover so well before. That bright orange

dot the fine folks at LTT put on the front sight tracked the A-zone like it was magnetically attached, the DA and SA trigger pulls were both sinfully slick, the gun barely moved in my hands when I fired it, and came right back down to the same spot afterward. The LTT Beretta 92FS made that sort of shooting EASY.

This first-ever FAS HMT Practice day was a bit of a beta test of the concept, and it was a rousing success. Not to tease people with what could have been, but cost was a whopping \$40. That will never happen again. In the future it will be at least \$100, probably more like \$150. Still way cheaper than paying for a multi-day class, but there's no doubt the beta testers made out.

What of the two folks, "my people," who did not pass the HMT this time? They'll be back. I don't tend to hang out with wimps, and there is no way either of them are going to pit themselves against the HMT, fail the first time, and not be back to rectify that sad state of affairs. Their time to pass the Firearms Academy of Seattle's Handgun Master Test will come.

You can find more Duane Thomas articles at patreon.com/duanethomas.

Scout Scope Mounts

Sorry, the optic pictured here is NOT included with the Scout Scope Mount.

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle	25374	\$79.99
Scout Scope Mount for SKS Rifle	25373	78.99

Dillon Teams Up With TechwearUSA

In response to everyone who has been asking us for Dillon Precision shooting jerseys, we've teamed up with **TechwearUSA** – Your Official Provider of Custom USPSA Gear!

The TechwearUSA AirFlex (\$70) is the ultimate performance layer and their lightest weight jersey. The TechwearUSA Premier Polo (\$95) is made of proprietary Techstatic fabric and is the ultimate competition polo. From its classic cut, added length to make sure it stays tucked in, fold-over collar, zipper front and side panels made from extra breathable mesh, every detail of this garment has been thought through to help you look, feel and perform at your best.

To order TechwearUSA's Dillon Precision men's and women's shooting jerseys, go to techwearusa.com. By the way, the "USA" in TechwearUSA signifies that their apparel is MADE HERE!

THINK FAST

STRIKER-FIRED

5.5LB TRIGGER

10+1 CAPACITY

RED-DOT OPTIC

\$399.99

Think Fast: Everything moves fast these days, but we know a few things about staying a step ahead of the competition. That's why we created the DVG-1RD; a striker-fired subcompact 9mm. The factory-equipped red-dot optic means faster target acquisition and our proprietary manufacturing process means big savings on a performance firearm.
