ATTENTION DILLON CUSTOMERS: Because of changes to California's Proposition 65 that took effect on August 30, 2018, companies doing business in California are mandated to provide warnings on products that may expose Californias to any one or more of a list of approximately 900 chemicals, including Lead, which are "known to the State of California to cause cancer, birth defects or other reproductive harm." The new regulation states that a warning must be "provided in the catalog in a manner that clearly associates it with the item being purchased." Though we have no reason to believe our products could cause harm when used as intended, we now include the appropriate Proposition 65 warnings on some of our products to meet the California "safe harbor" requirements.

Dillon's Bill of Rights for Reloaders

All of Dillon Precision's customers have certain inalienable rights when they buy a reloading product:

- **1. Right of Quality** YOU THE CUSTOMER have the right to expect a well-designed product, manufactured with quality materials and workmanship that does what the seller claims it will do.
- **2. Right to Test and Send-Back** YOU THE CUSTOMER should have the right to test the product on your own reloading bench for at least 30 days, and if it does not live up to your expectations, send it back for a full refund.
- **3. Right of Service** YOU THE CUSTOMER have the right to free, friendly, expert service and technical advice available through a toll-free phone number. This service should include prompt replacement of broken or bad parts free of charge.
- **4. Right of Warranty** YOU THE CUSTOMER have the right to a lifetime warranty on any non-commercial-grade reloading product you purchase. *Unfortunately, we can't offer this warranty on textile products and electrical or electronic components.*
- **5. Right to be Heard** YOU THE CUSTOMER should have the right to speak to someone of authority anytime you can't get satisfaction through normal channels. If our sales representatives aren't able to help you, our supervisors have a mandate to take customer-satisfaction issues all the way to the owner of the company if necessary.

Editor's Note: The Bill of Rights for Reloaders is Dillon Precision Products' customer-satisfaction policy. It remains very much unchanged from the day the company was founded. The disclaimer about textile products and electrical or electronic components reflects the reality of how those products are produced in today's world. Ultimately, our founder recognized that satisfied customers are our best advertising, and the only thing that differentiated his company from all the others at the time was the warranty and customer service he offered.

We constantly strive to live up to his standards.

Please let us know if we're not succeeding.

Rapid Trim 1500 Case Trimmer

he RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/ trim die. (Vacuum cleaner and hose not included.) The RT 1500 is equipped with a

quick-disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer **62164** is **\$400.00.** (Available only in 110 volt 60 hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, **13141**, are **\$24.19** each. Upper lock rings, **13559**, are **\$8.79** each.

ITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Intil now, reusing military brass, with its crimped primer pockets, \$125.00 has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the tool steel, hardened swage rod

(easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage

system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

Case Preparation Equipment

Vibratory Case Cleaners Case/Media Separators

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is one of the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour. Not only is our capacity greater than most, but our motor is also larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine! The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media. We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG - big enough to handle the entire load of the FL-2000 series case cleaners. The solution was an injection molded reversible part. Simple, and it works great. Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench. It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon created the CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This case cleaner uses the same motor as the CV-2001 and is every bit as tough - just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit. Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard - and do it in a more compact area!

Rapid Polish 290 is the first cartridge

case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less

each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases! Rapid Polish 290

8 oz. bottle. 13804 \$9.99 149.99 20255 Case (20 pc.)

illon's D.C.L. nonaerosol case lube is easy to use. Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge cases and you're ready to load. Try a bottle. You'll never use a grease pad

10 bottles of polish/10 of lube^ Case (20 pc.)

Don't Forget Polishing Media!

Crushed walnut hull polishing media quickly cleans even the dirtiest of cases and is the best solution for badly tarnished, range-pick-up brass. 13287 15-pound bag \$23.99

Ground corn cob polishing media is the best there is for that final polish. Leaves your brass looking better than factory new!

10-pound bag 13496 \$15.99

By John Kleespies

With the current component shortage, many reloaders are patching together sets of dummy rounds with spare bullets and brass to discover the benefits of dryfire practice. Specifically, "dryfire" involves the manipulation of a gun that is unloaded – or, better, loaded with dormant "dummy" rounds – to simulate shooting, minus the loud, expensive part. This allows shooters to develop their shooting skills without dipping into their precious ammunition reserves.

In his book *With Winning In Mind*, Olympic shooter Lanny Bassham recorded how he was unable to get to a firing range due to work constraints from 1976 to 1978. Because of this, he dryfire practiced precision rifle shooting for five nights a week in his spare bedroom. He won the Nationals in 1977 and 1978, despite only securing six days of actual live-fire practice throughout that entire stretch.

And then he won the World Championships in 1978! Yet so many folks convince themselves that dryfire is a waste of time....

I've had competitive shooters tell me that the only practice they need is a match or two every weekend... and I'll watch as their growth eventually plateaus at about B-class. This is because competition is not practice – when shooting a match, there is way too much occurring to focus on improving specific skills. Practice is practice, and the only practice that matters is the kind that concentrates on a specific skill that you have identified as one of your weak points.

Maybe you don't know what specific skills you particularly need to improve? Dryfire, my friend – while paying attention – and it won't take long to figure things out.

For instance, one of the biggest areas of improvement for many shooters is seeing their sights from the time the trigger breaks through the moment the bullet exits the barrel. Yeah, you're reading this right now and shaking your head, honestly believing that this isn't a problem for you, because you think that you're seeing your sights.

Get out your unloaded pistol, set a timer, and aim at a spot on the wall while pulling the trigger and concentrating on keeping the sights aligned on that spot all the way through and past the hammer drop. Do this for a total of five uninterrupted minutes.

All I'm asking for is five honest minutes – and that you pay attention.

By eliminating the actual gunshot and its accompanying ruckus, shooters will properly see their sights for the first time and can therefore deeply analyze their sight alignment until they spot the exact place where things go wrong.

Many shooters are shocked to learn how much a firearm moves off target before the trigger even breaks due to an improperly placed index finger, or how far the sights bobble at the impact of the hammer because of improper grip, or that on every dozenth trigger pull they are flinching way the heck down there in anticipation of recoil.

The thing is, when you're live firing, all that stuff happens before the bullet leaves the barrel, during that crucial fraction of a second that keeps screwing up your shots, over and over again.

They ain't "fliers," buddy. They're you.

The other secret to dryfire's effectiveness is good, old-fashioned volume. Consider the numbers: a Steel Challenge shooter fires a minimum of 195 shots in a full match, plus however many misses are added to the mix. Using a scaled Steel Challenge stage reproduction (www.steelshootbanners.com – definitely worth checking out!), I can dry fire at least ten practice strings, at five shots per string, per minute.

That's right: in terms of trigger pulls, a mere five minutes of dryfire produces more trigger pulls than an entire day spent shooting a Steel Challenge match. Fifteen-minutes of concentrated dryfire practice could potentially provide more trigger pulls than a month of SCSA competitions.

But why stop there? Keep reloading rounds on your Dillon progressive in order to do some live fire practices, but now you're coordinating your live fire with your dryfire skill building by reproducing the same dryfire stages at the range... and the skill growth will become exponential.

Here are 10 pieces of advice from my own dryfire experience, in no particular order... except for #1:

- 1. Safety first: no live rounds in the dryfire area, and clearly mark dryfire magazines so there's no mix-ups. Ensure another level of safety by verifying that your targets have a real backstop that can halt a bullet. Want to win the world's safest shooter award? Remove your gun's firing pin before dry firing.
- 2. Designate a 180 line and consciously practice the same safety protocols as required at the range. Remember that repetition instills bad habits as well as good ones. If you get in the routine of breaking the 180 in your dryfire area, it's only a matter of time before you'll find yourself being ejected from your club. If using a par timer for USPSA-type competitions, download a dryfire program on your smartphone that is programmed to verbally say "Are you ready... standby... beep!" to build the habits and comfort for when you step into the start box, and the RO begins his commands... and your brain fades into the proverbial mush.
- 3. Use your Dillon reloading machine to craft some clearly identifiable dummy rounds of the same weight as you'll use in competition. A USPSA shooter practicing without that fully loaded "big stick" will experience a rude awakening when his gun suddenly weighs a pound more on match day. And for all the "Mr. I Only Shoot To Practice Self-Defense" guys reading this article, try practicing reloads with an empty magazine versus a fully-loaded mag with a follower that doesn't want to budge after the first "reloaded" mag falls out of the gun and stubs your toe, you'll see the importance of practicing with dummies!
- **4. Every dryfire session must concentrate on a specific skill.** Reproducing stages and simply banging them out is no different than thinking that match competition is the same as practice. Identify a specific skill that is relevant to your discipline, whether it's speed shooting (reaction to the start beep) or USPSA-style run'n'gun (first shot upon entering a box) or precision rifle (breaking the trigger between heartbeats) and concentrate on that skill until you've measured improvement.
- **5. Precision is inextricably tied to visual discipline.** Were your sights aligned on the target before, through, and after the trigger pull? If any one of those was a "maybe," then you've got a specific goal to practice.

- And be honest! If you aren't visually verifying a "hit" through the entire trigger pull, then don't count that as a successful run.
- **6.** Indoor lighting never compares to the sun, so I reserve my iron-sight practice for outdoors. Shooting a scope or a dot? Practice indoors, day or night, and in any weather!
- 7. Take the time to build a handful of permanent arrays. Every minute saved from setting up and breaking down equates to more trigger pulls. Not to mention, I'm way more motivated to start practicing if I know that the setup is already waiting for me.
- 8. Ever heard the phrase, "It's all about the trigger" while at the range? That line holds true in dryfire practice, too. If practicing with a single-action pistol or precision rifle, start with the hammer cocked and safety usable so you can manipulate everything at least through one trigger pull. On an AR-style rifle, lock open the bolt, as it will continuously give you the range of a full trigger pull and allow for manipulation of the safety. On a GLOCK, a piece of cardstock that barely keeps the slide from locking will allow you the length of a full trigger pull even after the first shot.
- **9. Utilize retired magazines for dryfire practice.** If you drop your loaded mags on the ground enough times while practicing reloads, then the feed lips will open up from the jarring of those dummy rounds, which will result in guaranteed malfunctions the next time you live-fire those mags. Do yourself a big favor and preserve your competition/defense magazines for real life.
- **10.** Define goals and drills which are numerically quantifiable and track your progress. It's not necessary to record every single run, but it's essential to regularly measure for success and adjust accordingly. Keep goals achievable: my speed shooting gains are measured in hundredths of a second. If practicing for precision rifle, start with a certain size of dot as a target and gradually make it smaller as you see the hits through the entire trigger pull and drop of the hammer. When maintaining your records, note the specific distances to and between targets, as well as the size of the targets, so that the stage may be exactly reproduced over time.

And my final tip? Please refer back to number 1: safety first. No live rounds, anywhere! Always check and re-check dummy rounds and magazines. Lastly, always have a backstop that's capable of containing a bullet strike in case there is an accidental discharge... which shouldn't happen because there's no live rounds in the area, and you're using clearly marked magazines, and you've checked and verified every dummy round.

I bet you're even that guy who removes his firing pin, aren't you?

Dillon's Range Bag^

33389 \$139.99

B orrowing design features from Dillon's original range bag, but with upgraded metal D-rings and clips for the shoulder strap, Dillon's "Retro" Gray Range Bag is constructed of heavy- duty ballistic nylon.

The primary compartment measures 14-1/4"x7"x8" and features two interior pockets measuring 6-1/2"x6-3/4" with hook-and-eye closure flaps. An additional interior pocket measures 5"x7-1/2".

The top cover can be quickly secured via hook-and-loop strips at the end or by two side zippers.

There are two zip-up outer compartments measuring 12"x8"x1-1/2". One of the outer compartments features extra padding for carrying a handgun, and the other has an external zippered compartment for pens, pencils, etc.

"Border Shift" Ammo Bag

Dillon's two-compartment ammo bag is constructed with a flexible inner liner that will allow the entire volume to be accessible from either zippered opening. You'll never again mix fired brass with loaded rounds!

PRIMER FLIP TRAY

A heavy, high-quality tray large enough for the Federal primer package. 13606, \$26.00 ea.

Mr. Bulletfeeder by Double-Alpha

r. Bulletfeeder has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy - a world leader in practical-shootingrelated product manufacturing and distribution - at the helm. The design allows the bullet collator to be mounted onto the casefeeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

Floating for Wrench Die Inserts Decan Assv Vented Seating Tapered Stem Carbide Ring Tiahter ACCU-Heavy. Large

hazuiheS

Mouths

Sizing/Depriming Die (Pistol)

Carbide

Headed

Decap Pin

Our sizing/depriming dies feature a "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design is the long, tapered carbide ring with a radiused opening. That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother - but that's still only a part of the story.

Bullet Seating Die (Pistol)

Our guick-disassembly seat die allows the user to disassemble and clean the seating die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem. Dillon's double-ended design makes it simple to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time.

Crimp Die (Pistol)

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

Sizing/Depriming Die (Rifle)

CRIMP

Die

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die (Rifle)

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the

Taper Crimp Die (Rifle)

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

UNIVERSAL MOUNTING HARDWARE KIT

Includes: 4-Grade 5 Hex Bolts, 4-Lock Nuts, 4 Flat Washers, 4-Fender Washers, 2-Wood Screws.

illon's RL 550 has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 - adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles. The BL 550 is essentially an RL 550 without the automatic priming

and powder systems. Capable of loading over 160 calibers – just like the RL 550 – it uses any manufacturer's standard $7/8'' \times 14$ reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550 loader! The interchangeable toolhead (Page 26) makes it quick, easy and inexpensive to change calibers.

AUTO PRIME SYSTEM^ 16627 \$115.00

PRIMER SYSTEM EARLY WARNING^

Allows you to focus on loading instead of worrying about failing to seat a primer, and is an easy slip-on attachment to the auto prime system. 20302 \$35.00

ÁUTO POWDER SYSTEM^

Accurate to within 0.1 grain, our Automatic Powder Measure is world renowned for its charge-to-charge consistency.

Dillon Reloading Accessories

A Strong Mount increases your machine's "footprint" to over 10", spreading the load over the whole bench instead of stressing the leading edge. For XL 750/650 owners with limited overhead clearance, the XL 750/650-only

mount raises the machine 6" above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL 550/XL 750/650 **22051 \$85.00**XL 750/650-only **22052 83.00**"SDB" **22223 95.00**

These plates bolt directly to your bench top, and are drilled and tapped to allow mounting your reloading machine directly to the top of the mounting plate.

Stock #62005, \$95.00 is for: XL 750, XL 650, RL 550 and Square

Deal "B". **Stock #62006, \$95.00** is for: RL 1100, CP 2000, Super 1050 and RL 1050 as well as *any* Dillon reloading machine that is mounted on the Dillon Strong Mount.

Our Bullet Tray is a simple, shallow aluminum tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL 550 and XL 750/650 when equipped with the RL 550/750/650 Strong Mount, and a separate kit is available for the RL/Super 1050.

Bullet Tray Kit 1050 Tray Kit 22214 \$55.00 22215 55.00 nsor provides an audible

The **Low Powder Sensor** provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

16306

Our **Toolholders** are available for your reloading machine and ensure that the tools you need to service your reloader are handy and organized. No more digging around your bench trying to find the right size hex wrench!

mproves accuracy of cast and jacketed bullet reloads. Extends case life. A "Must-Have" die for the cast bullet or flat-base bullet user. The first step expands the inside of the case neck to just under bullet diameter for precise case neck tension in the finished reload. The second step expands the case mouth to bullet diameter or slightly over. This allows the jacketed or cast bullet to be started perfectly centered in the case mouth and properly aligned with the axis

of the case neck. By adjusting the plug slightly deeper, the second step also provides a slight flaring of the case mouth for reloaders using cast bullets.

Dillon AkroBins[^]

kroBins are ideal for reloaders Awho load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Drawing and Reloading in

By Maureen P. Sangiorgio NRA-Certified Firearm Instructor/Range Safety Officer Photos: Force Options Tactical Training Solutions

According to the FBI and The Bureau of Justice Statistics National Crime Victimization Survey, for the first time in many years, violent crime has recently increased in the United States. Major cities in the US saw a 33-percent increase in homicides last year. In

addition, 63 of the 66 largest police jurisdictions saw an increase in at least one category of violent crime, such as homicide, rape, robbery, and aggravated assault.

The reasons for these startling statistics vary, including social anxiety because of the pandemic, defunding police in major cities, shifts in police from neighborhoods to cities, and releasing criminals early to reduce the risk of COVID in jails.

No matter what the reason, these are dangerous times we're living in, and it's a good idea to learn how to protect yourself. Check out these tips on how to draw and reload in an active shooter situation, from a topic expert.

Make it smooth.

"When drawing your pistol, you want to smoothly and completely clear your garment with your dominant hand," advises Fred Mastison, president, Force Options USA, and one of the country's leading experts in the fields of defensive tactics, firearms, and executive protection. "You want to have a smooth, deliberate draw straight out of the holster to begin your presentation to the target. Bring up your support hand around the front of the grip while you are bringing up your gun."

According to Mastison, if you draw too fast, you may not get a good grip, or you may overextend. If your gun has an external safety, you could forget to disengage the safety. As you present the gun, your thumb should be on the safety. Once you bring the gun up, so it's level with the ground, disengage the safety, aim, and commence firing at the target's center mass area.

Think about where you carry. It's key to think about you're carrying your firearm somewhere that you're comfortable with so you can quickly access it in a panic, self-defense situation. "We need to dress

around our gun[s]," says Mastison. "Our gun is the core of what we are about so the gun's location is the base of the draw. Some people like to appendix carry, and others like to carry their firearm in a shoulder holster. Keep in mind that you're going to be panicking, so you need to press down the panic, and work on a smooth presentation from wherever on or off your body works for you."

Reload right. There are two types of reloads – tactical and emergency. In a tactical reload, the shooter missed all his/her shots due to bad aim, or a gun malfunction. With an emergency reload, the shooter has emptied his/her mag, but the adversary keeps shooting, or there is

more than one adversary coming at him/her.

Either way, you want a fast, smooth, deliberate reload. "Bring the gun slightly back, angle it up, closer to your workspace, and reach back with your support side hand to get that extra magazine," explains Mastison. "You should have one loaded magazine in the gun and carry two loaded backup magazines. Push the mag release so the magazine drops out of the gun and index your fresh mag. On most handguns, the mag release is located on the left-hand side of the gun, behind the trigger guard. The goal here is to have the two magazines passing in one space, with one

an Active-Shooter Situation

smooth, fluid motion. Insert the new fresh mag into the gun firmly and slam it in until it clicks. Depending on the gun, rack the slide or press the slide release. This whole process should only take about a half a second."

Think mag placement. Another important point to consider is where are you putting that extra magazine? Is it deep in your pocket, in your back pocket

somewhere? Practice recreating the scenario where you must grab that extra mag quickly and place the mag where you can get to it the fastest. Mastison recommends a concealed-carry magazine holster or pouch that fits inside the waistband. Several manufacturers include: Blade-Tech, Tulster, Blackhawk, Gunleather, and TFGF.

Practice, practice, **practice.** According to Mastison, this is where training and repetition come in to play. "If you find yourself in an active-shooter situation, a lot of people think they are going to rise to the occasion, but they don't," says Mastison. "You sink to your lowest level of training. You're going to fall back to your

worst day on the range. It's critical to dry practice your draw and reload every single day. Most people don't dry practice every day, and that's a huge mistake." Mastison suggests dry practice your draw with an empty gun about 15-20 presentations every day. "Investing a mere two minutes in daily dry practice draw just might save your life one day."

He also recommends you practice your draw from your everyday conceal position. So, if you carry appendix underneath your shirt or even if you carry off body in a purse you need to practice presenting that weapon from where you would normally be carrying it.

What's in a Name?

ccording to Mastison, the phrase "high-capacity on politics, not fact. "The term 'high capacity' is a term that has been completely manufactured by the antigun left," says Mastison. "There is no such thing as a high-capacity magazine. There's a standard-capacity

> magazine. So, for example with an AR-15 the standard-capacity magazine is a 30-round mag. That's the normal, standard mag that comes with the gun."

According the Mastison, what state governments have done is require that we reduce that capacity. So now it's a 10-round magazine. And while some 10-round magazines do just fine with hunting, those are not the norm. Those are reduced-capacity magazines. "So, in fact there's only two types of magazines, which are standard and reduced," says Mastison. "I'm on a mission to try to educate people about this terminology and get them to stop using the term 'high-capacity magazine' because it doesn't exist, and

we're really falling into their verbiage. We're saying

things they want us to say."

Regarding magazines for your personal defense, you want to have as many rounds as you possibly can. "If you were living in a highly communist state where they don't allow you to have a standard-capacity magazine, you need to have additional magazines on you in the event that you need them," advises Mastison. "And it's especially true in today's society, in today's current environment where people are being assaulted by groups of people. The prevalence of gang and mob violence today is very real."

WARNING: These products contain lead, which is known to cause birth defects, other reproductive harm and cancer. Handling components, ammunition, cleaning firearms or discharging firearms in poorly ventilated areas may result in lead exposure. Have adequate ventilation at all times and wash your hands thoroughly after exposure.

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

AMMOBRASS, LLC Swage Setter

he AmmoBrass Swage Setter is for use with any swaging devices such as Dillon's Super Swage 600, Dillon 1050/1100 presses, and almost any other swaging device to assist you in properly setting your swage rod and swage back-up die.

West Orlando Firearms Training (woft.com), What is it?

WOFT is a 20-acre training facility just over an hour from the Orlando, Florida airport. Several times a year they hold multiple-day training events with the goal of helping every American who understands that bad things can happen to good people. The concept is custom training for any level to help gain the lifesaving tools necessary to avoid or survive a bad situation. This elite training is tailored to each individual or family.

What the Physical Location Has to Offer

There is a live-fire shoot house for room clearing. There is a 100-yard range that is half covered with a classroom with large bay doors that open to allow the group to shoot from inside in comfort of air conditioning and shade. Multiple short pistol bays are set up that allow multiple training stations on the same range. The mess hall is also a training bay offering catered breakfasts and lunches and then is transformed into a "coffee shop" for scenario-based training. Lastly, they have a "Low-Light Room." This is a large bay where a car or multiple cars as well as any other items can be used to set up training scenarios. This was my favorite training stage of them all. In reality, it's more than low light, it's more like NO light. This location can be manipulated in many ways. The ability to add sound, light, distractors, multiple role-players or students makes it like no other. Until you have experienced this type of training it's hard to imagine what you don't know.

Staffing at the Location

The staff made everyone feel like family and this is often said by attendees, but this crew really went above and beyond to make sure everyone was fed, comfortable, and happy!

What Made This WOFT Event Special

The event at WOFT from September 10-12, 2021 had the bonus of being an HKPro (hkpro.com) event as well. What that means is the team of HKPro staff came out to offer specific training on the HK firearms we have come to know and love! This also came with a special treat of seeing some of the more rare and sought-after HK firearms and having the ability to shoot them!

Let's break down the six stations we had at this three-day event:

1. The Dark Room

This room was run by the owner himself, Philip T. with a staff of a few more for safety and role players. Here you are outfitted with a holster and Ultimate Training Munitions (UTM – <u>utmworldwide.com</u>) ammo. When you enter the dark room, be ready for anything!

2. The 100-Yard Range

This range was run by the original "Mr. HK MP5 Operator," Tom Dresner. In this block he reviewed the operation and handling of the MP5 as well as full-auto shooting.

3. & 4. The Pistol Bays

One station was run by Derek G. - the official

800-223-4570 • dillonprecision.com

competitor for HK – on the topic of red-dot optics on pistols. The other station was run by James W. on the topic of CCW.

5. The Classroom

An armorer's class was taught by Bob S. This came with a bonus history lesson into the incredible story and development of HK. Learning the history was much more interesting than you'd expect. The armorer's class then focused on hands-on maintenance and operation of the HK VP9.

6. The Coffee Shop

Here everyone got to respond to several different scenarios as a group. This gave us a chance to see the chaos and confusion that can take place in these group settings. Some of these events were designed to educate students when NOT to get involved and some of these were robberies gone bad with UTM rounds flying both ways.

Every station covered three hours of real-world information geared to help everyone in their day-to-day lives as well as that potential "bad day." Each station ended the sessions with a debrief from everyone at the station in order to offer improvements in individual actions going forward.

What Does a Normal Training Day Look Like?

In the morning, you meet onsite for breakfast and get to know your group. The group is then led to the dark room that doubles as a briefing room. Here you review the day to come, followed by a 15-minute break as you make your way to one of the six stations. When your three-hour station is finished, everyone heads to lunch in the coffee shop. After lunch you then proceed to another group discussion about the morning training just completed as well as preparation for the afternoon three-hour block. Lastly, one more debriefing and a wrap-up of the day. This format allows all to

share what was gained as each person processes the information.

What Do You Need to Bring?

I showed up with a backpack only! This held my eye and ear protection, basic hygiene gear, and a few changes of range-appropriate attire. This made the flight very simple with no checked bag.

In Summary, What Was it Like?

The WOFT facility has much to offer. Everyone from a first-time shooter to a high-end operator can benefit. Hearing the excitement from the participants of each event inspired me to contact several of them to gain their perspective. Rather than my takeaways, here are the actual clients' after-action reviews:

Yates C. – "For those who are contemplating a trip to WOFT I'll first say this – WHAT AN EVENT! I've posted a lot of content over the past few days and while doing so I've taken some time to reflect. It's no secret that those who provided firearms training are masters of their craft, so here's my take on my experience and training with the WOFT staff specifically:

"Where the rubber meets the road - the ultimate testing ground if you will. The great thing about scenario-based training when done properly is that it is not a 'one size fits all' approach - the scenarios here are catered to match the individual needs of each student. The amenities and the staff are truly exceptional." **Adam G.** – "What to say about this event? I mainly went for the HK portions of the event.... I was really surprised and humbled with the training I received. The coffee-house scenarios were a real eye opener! I didn't realize how extremely fast things escalate and your reaction times matter with your split-second decision making in the balance between shooting or running away. If you have never thought about how extremely quick your life can change, and not training to be your

best self might be the difference between life and death for you or a loved one, look up the WOFT website and check out their scenario training. Extremely highly recommended!"

Eric F. – "I've been fortunate enough to take a good bit of training over two decades and I can say with no exaggeration that the WOFT HKPro VIP event was the best I've ever experienced. It was exceptionally well run from start to finish, extremely safe, and most important – both incredibly valuable and ridiculously enjoyable.

"I took away multiple moments that will stick with

me for a long time, but most specifically several valuable lessons and techniques that I am confident will change not only how I train and how I shoot, but learning that will immediately impact how I perform if I'm ever faced with a situation where I have to defend myself or my family."

Melanie B. – "I have always believed that a warrior should never rely on one tool. Training to be a well-rounded warrior is a key in preparing for possibly the worst day of your life. It sounds a little extreme for a common civilian to think that way, but the world today is getting more dangerous by the day."

FIX IT STICKS

All-in-One **Torque Driver Kit**

eaturing the Fix It Sticks Allin-One Torque Driver. Tighten down your scope rings, mounts, actions screws, etc. while in the field, at the range, or at home. Kit includes: All-in-One Torque Driver (15 - 65 inch lbs); T-Way T-Handle Wrench; 15 different bits: T10, T15, T20, T25, Ihex 3/32, 5/64, 1/8, 5/32, 3/16, 2.5mm, 3mm, 4mm, 5mm], P1, slotted #5; 1/2" Socket and 1/4" bit adapter set; and Zippered case with Molded Holder.

29835

\$112.00

Replaceable Edition Shooting/Hunting Kit

his kit offers unmatched portability, functionality and versatility. Two Fix It Sticks (which combine to form a T-Handle) and 16 bits are held in a molded bracket for portability/storage. Extra room on each end can hold two additional bits. Includes two sticks, bracket, and 16 different bits: 2.5mm Hex, 3mm Hex, 4mm Hex, 5mm Hex, T-10, T-15, T-20, T-25, T-30, 1/8" Hex, 5/64" Hex, 3/32" Hex, 5/32" Hex, 3/16" Hex, Slotted #5, and Phillips #1.

> 29843 \$40.00

Mini All-in-One Torque Driver

ighten scope rings, red dot sights, mounting plates, etc. Just turn the drive handle until the hash mark lines up with the torque value you need (from 6 - 25 inch-lbs).

> 29837 \$55.00

All-in-One Torque Driver

Tighten scope rings, mounts, action screws, etc. Just turn the drive handle until the hash mark lines up with the torque value vou need (from 15 - 65 inch-lbs).

> 29836 \$60.00

Scope Bubble Level Set

evel your optics with machined aluminum levels, featuring precise UK-sourced bubble vials. Kit includes: Magnetic level, NATO/Pic rail level/anti-cant device, and Protective foam carrier with pouch.

> 29839 \$50.00

Scope Jack

A new way to level your optic, the Scope Jack works with any 1/4 inch driver to quickly and easily level your scope to your NATO/Pic rail. Just mount the Scope Jack to the rail under your scope and turn the drive handle until the lifting arm engages with the flat section under your turrets. Once the scope is level, maintain pressure while tightening your ring screws to keep optic level throughout the process.

> 29838 \$44.00

Bolt Carrier Group Scraper

ustom bit that is designed to clean carbon off the various surfaces of the Bolt Carrier Group. Works with any standard magnetic 1/4" driver. Black Isonite finish for increased corrosion resistance and strength.

5.11 Tactical[®]

Double Duty TDU®

The Double Duty TDU® belt is metal-detector friendly and offers two color options. Both the Trainer and Operator belts feature 6,000-pound-test buckles and heavy, reinforced stitching, therefore can be guickly converted into secure tie downs, secondary carry straps or emergency harnesses. All 5.11 tactical belts are made of strong nylon webbing and provide a stable support for carrying firearms and accessories. According to 5.11 Tactical, belt sizes run small, so they recommend you order one size up for the best fit.

BLADETECU

The Blade-Tech Ultimate Carry Belt by Nexbelt is specifically designed for those who carry a firearm daily for personal defense. The PreciseFit ratchet system allows you to quickly tighten or loosen the belt in 1/4" increments up to 6" for the perfect fit – no matter how you carry. Rest assured, this will be the most comfortable and fastest adjusting belt you will ever own. The Ultimate Carry Belt has a waterresistant backing that helps prevent moisture from penetrating the outer surface and allows for extra strength and durability. One size adjusts to fit all.

Comtech's

"HE STINGER: Comtech's own personal defense device. Designed to act as a "force multiplier," it's like having the punching power of a karate master – instantly! There's really nothing like it for easy carry and access. It passes un-noticed by 90 percent of people who see it. Yup, just another "keychain device" to most, and yet it works so well when needed. You deserve a Stinger!

illon's "Plan B" Very-Bad-Day Planner Holster^ holds a handgun and a spare magazine or pepper spray, yet it fits in with business clothing and won't draw undue attention. It looks like a typical day planner, but inside there's a holster that's adaptable for either rightor left-hand draw. It fits most .380, 9mm, .40 and .45 caliber autos, including: Beretta, Colt, GLOCK, HK, Kahr, Kel-Tec, Ruger, Taurus, SIG, and Smith & Wesson. Will also hold small-frame revolvers with two- to four-inch barrels.

"Plan B" Holster

Nighthawk **Custom** Drop-In 1911 **Trigger System**

hen looking to upgrade the performance of a 1911 pistol, a When looking to upgrade the performance of a common improvement sought by shooters is a high-quality trib quality trib trigger job, with a crisp, clean break. Until now, a high-quality trigger job has never been in the realm of a "drop-in" upgrade. Nighthawk Custom has changed that with the introduction of its Drop-In Trigger System (DTS) for 1911 pistols.

An all-in-one unit, the DTS replaces your existing hammer, hammer strut, sear, disconnector, and sear spring. Your existing sear pin and hammer pin will be retained for use with the DTS, but no other parts are necessary for installation. With a steel housing securing the unit, the DTS features all Fully Machined™, stainless steel internal components. The traditional three-pronged sear spring is no longer necessary as the springs for the disconnector and sear are built into the unit. A single-leg grip safety spring is included with the DTS to replace the existing sear spring.

The DTS is designed for use in most 1911 models, and installation is simple enough that minimal gunsmithing skills are necessary.

By Oleg Volk

The OCCAM Defense Solutions AK pistol caught my attention at a store display. Even working with guns frequently, I don't see such visually striking designs often. The MERC Freefloat Handguard replacing the standard two-piece forend gives both the interface for optics and lights without blocking the removal of the dust cover, and a well-ventilated surface for the support hand almost up to the muzzle of the 10.5" barrel. The weapon surprised me with its heft: 7-1/4 pounds with sights and an empty magazine. It was also expensive, retailing at over \$3300. I got curious as to what made it special. The store – OnTarget in Murfreesboro, Tennessee – made the pistol available to me for this article.

Certain features could be appreciated without live fire: a very crisp 4.5-pound ALG wide-face trigger, a comfortable folding Gearhead Works Tailhook brace, and the top Picatinny rail extending to the back of the ejection port. The Freefloat Handguard has an additional heat shield inside to protect the support hand. The 10.7" distance between the low-mounted shielded front post and the variable-aperture rear sight gives a reasonable expectation of accuracy.

The first and most basic function test was with white box 7.62x39 ball at 20 yards. Due to the distance of the rear sight from my eye, only the two larger apertures are usable for me, but they work well. The sights were within a couple of clicks from right on for windage. I easily kept the hits on a 12-inch steel

plate at 100 yards by aiming at the bottom edge, but the initial close zero was much too high. A 7.62x39 round loses only 200 fps from 16" to 10.5" barrel. With 2100 fps velocity from the short barrel, iron sight battle zero should be 45 yards for the far zero of 100 yards, with the drop of just under 3 inches at 150. With the irons being mainly emergency backups, this strikes me as the most realistic setup for minimal offset under most circumstances. The iron sights are protected with massive, rounded ridges which do not interfere with the sight picture.

The four-prong flash hider, which is incidentally set up for Dead Air sound suppressors, was so efficient at its task that I saw no muzzle flash even at dusk. The trigger was perfectly transparent in use, so making overlapping hits at 30 yards was easy. The forend warmed up noticeably near the receiver but much less in the ventilated portion. Unless insulating rail covers are used, the front would get too hot for a comfortable hold with ungloved hands after about 60 rounds and the back after about 40. The front is the more natural hold position with this short weapon. I would rate the sights as sufficient out to 50-60 yards for point targets like cranio-ocular triangle and out to 150 for silhouettes. Past that, optics rule. I meant to install a Swampfox 1-4x scope to test accuracy but misread the box...after the scope mounted on a backwards cantilever mount was installed, I discovered that it's a similar but slightly larger 1-10x model. Since it fit the pistol so well, I wanted to use it for really testing accuracy.

For the same purpose, I switched to Geco ammunition. They make some of the best ball cartridges for this caliber.

The Swampfox optic proved extremely clear and high in contrast, with the entire Guerilla Dot BDC reticle illuminated in red for either dusk or daylight. At 1x, it made a very competent rapid-acquisition sight with parallax set at 100 yards instead of the 50 usual for red dots. At medium magnification, it improved the sight picture for supported firing, while 10x ruled for the bench. Excellent eyebox aided quick reticle acquisition and included cattail enabled rapid magnification changes. Shorter barrel length has little effect on realistic engagement distance: it's limited more by the visibility of the opponent and by the legal requirements than by the difference of trajectories between 2100 fps and 2300 fps. The scope, being adjustable to individual eyesight, is a better optic than any red dot. The downside is the size and the weight, but the pistol is heavy enough as it is, so the extra ounces on top won't cause it to roll and actually make the balance more neutral. With the relatively curvy flight path of

7.62x39 bullets, a good BDC is a real help for scoring hits. With 100yard center dot zero, the Arrowhead scope reticle hash marks worked out to roughly 200, 250, and 325 yards. The placement of the brace puts the eye right on the centerline of the optic.

The infamous AK safety didn't click audi-

bly but settled into safe or fire positions with authority. A shelf in the back of it made readying the pistol to fire an easy task with the index finger, also providing a good spot of keeping the digit in register between courses of fire. The weapon just worked from the moment it came out of the box. The main difference from a full-length AKM rifle was in how well it fit inside a vehicle or a house, and in how well-balanced it will remain with a sound suppressor attached. The gas system in ODS-1775 was meant to work with a bare muzzle but not over-gas when muffled. Since I wouldn't be switching suppressors on and off - that would require re-zeroing the optic – a thread-on model would be more compact and leak less gas. I did discover that the flash hider isn't threaded on – if I want 5/8x24 adapter, that must be specified from the factory instead of the Dead Air compatible Vortex. In order to guarantee suppressor alignment, OCCAM freezes the barrel and heats up the threaded extension, then mates the two

with almost no clearance. Once the two parts return to room temperature, they fit together solidly and provide precise alignment needed to avoid baffle strikes.

The Krinkov-length AK piston comes out from the back of the receiver, so the forend can stay put during fieldstripping. OCCAM Defense advises cleaning the gas tube in place even after using corrosive ammunition, the latter fortunately not being very common. Overall, several loads stand out for antipersonnel use. Federal Fusion, very accurate and especially good from the shorter barrel because it won't over-expand up close. Maker Bullets Trident, its all-copper bullets in either 124-grain supersonic or 190-grain subsonic configurations are extremely accurate and expand to over an inch. G2 Research loads the same 124-grain Trident bullet to similar specs. Hornady Black SST is another highly accurate option with good terminal performance. OCCAM Defense test fires each pistol or rifle with three rounds of Wolf Polyformance from sandbags, sighting with a red dot through the iron sights set to the smallest aperture. They generally get about 2 MOA dispersion. I got about 1.5 MOA with a scope

> set to 5x and Geco FMI. Draco AK pistol shot as a comparison produced 3 MOA dispersion.

In the field configuration, a Crimson Trace CWL102 light outputting 500 lumens was added at the bottom of the forend, with its lens just behind the muzzle, out of the way of the blast. Besides the illumination, this light acted as an

improvised hand-stop to keep fingers away from the barrel and the flash hider. The length of the MERC forend allowed placing it far enough forward to escape any occlusion of the beam. QD sockets on the forend and the back of the brace strut made the installation of the MagPul sling a cinch. Overall weight with everything attached crept up to 9.3 pounds, but the short length made it very easy to manage. Swapping to a 1-4x scope would take off a few ounces with minimal loss of function.

Built in Moscow, Idaho, the guns are tested at very low winter temperatures, and heated up with rapid fire. The proprietary forend stays significantly cooler than competing designs, though the difference is more obvious on rifle-length builds. I've experienced zero stoppages, excellent practical accuracy, and I can see why this firearm commands a premium. Both a commuter sedan and a sports car would get you places, but one will do it quicker and with more fun along the way. ODS-1775 is the hot rod of AK pistols.

UpLULA Pistol Mag Loader

he UpLULA® loader is a military-grade, pocket-size, universal pistol magazine loader and unloader designed to load and unload virtually all* 9mm Luger up to .45 ACP single and double stack magazines of all manufacturers. It also loads most .380 ACP single and double-stack mags, and 1911 mags. The UpLULA® loader self-adjusts to the magazine and loads it easily, painlessly, and reliably! Loads the following mags: Astra, Auto Ordnance, Barak, Beretta, Browning, Bul, Colt, CZ, EAA, FN, Glock, HK, Hi-Point, High Standard, Jericho, Kahr, Kel-Tec, Kimber, Les Baer, Llama, Luger, Magnum Research, Para Ordnance, Phoenix Arms, Ruger, Sigma, Sig/Sauer, S&W, Springfield Armory, Star, Steyr, Taurus, Vector, Walther, and more.

Real Avid Gun Tools & Cleaning Gear

S mart MatsTM are cleaning mats on steroids. The no-slip backed padded mat features an oil-resistant surface. It allows you to properly clean your gun without ruining the kitchen table and is large enough to handle field-stripped guns. The ingenious magnetic parts tray ensures your pins, screws and springs are never lost again. This is real world gun cleaning taken to the next level.

AR-15 Smart Mat 1911 Smart Mat Handgun Smart Mat 29041 \$24.99 29040 19.99 29042 19.99

The Master Bench BlockTM is the most comprehensive AR15 bench block ever! It allows you to tap 13 critical pins from 5 different components. The block is wrapped in an over-molding that grips to your bench to prevent slippage.

29033 \$34.99

This advanced kit includes every standard and roll pin punch needed to build or work on an AR15.

29032 \$39.99

The Chamber Boss –AR15™ All-In-One AR15 Chamber Cleaning Kit. Every tool you need to easily eliminate baked-on carbon from the AR15 chamber.

21778 \$29.99

Installing a pivot pin is a small step that can quickly become a giant pain in the neck. Meet the AR15 Pivot Pin Tool – the one tool guaranteed to take the nail biting, pin-launching task of installing a pivot pin and turn it into something you might actually look forward to. Align the guide, insert the spring and detent pin, slide the pivot pin into place. Click. Snap. Done.

29034 \$9.99

Carbon Boss™ – AR15. This is the most comprehensive carbon removal multi-tool ever built. Extremely versatile, it has 12 precision surfaces to clean the most critical parts of your bolt, bolt carrier, cam pin, and firing pin. It's the enemy of your AR15's worst enemy.

29039 \$2

\$29.99

Eight profiles dig gunk out of the places that even the sun don't shine. They're tough on the crud but tender on the metal. A better designed, better built detailing kit that just might make your dentist jealous.

29036 \$9.99

and bore carbon free. It contains a star chamber brush and star chamber mop for cleaning inside the hard to reach star chamber. Star chamber pads help collect left-over carbon while applying the perfect amount of oil or solvent. The .223/5.56mm bore brush scrubs baked on carbon from lands and grooves.

29037 \$9.99

surgeon. That's why you use a star chamber brush to loosen the carbon then remove it with these star chamber cleaning pads. Done deal. Now get back to shooting. 20 wool chamber pads per package.

29038 \$12.99

64 Blue Press

Real Avid Smart TORO™

he most precise and technically advanced torque driver for guns. Specifically developed for optics mounting and gun builds. Discrete inch-poundincrement settings provide spot-on torque adjustments. Comfortable ergonomic grip with Force Assist makes tool manipulation a breeze. The functionally intuitive torque setting with visual, tactile and audible feedback provides confident assurance. To get you started, Smart Torq comes with 12 of the most commonly used gun bits. Never overtorque a scope ring again! 21776 \$79.99

Swab-its

Nos#!+, there I was...in my office, cleaning my revolver when the boss walks in with that "whiskey-tango-foxtrot" look on his face. "Hi," I said (thinking fast), "I'm trying out these Bore-tips before I write the Blue Press copy for them. They work GREAT!" The Bore-tips Swabs REALLY DO work. What you can't see under the foam is a plastic jag sized for a tight bore fit which provides for the uniform application of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reuseable

| standard 0-32 tillead cicarinig rous, and are tough and reuseable. | | |

Slip 2000 Products

725 Gun Cleaner Degreaser should truly be called Super Degreaser. This water-based cleaner will cut through the toughest cosmoline, carbon, grease and grime! Its super strength

be his se se se h

allows it to degum and degunk the dirtiest of gun parts when sprayed on or used in parts washers or solvent tanks! **NOTE:** To help prevent rusting, users must apply a gun lubricant immediately after cleaning to disperse any moisture in parts.

16 Oz. 19237 \$21.99

Slip 2000 Extreme
Weapons Lubricant
(EWL) was designed
for use on chain guns
and machine guns
like the MP5 and the
249SAW. It contains a
proprietary Anti-wear
agent that reduces
friction and wear by
90-95 percent. It is an
excellent CLP and is
able to clean, lubricate and protect.

4 Oz. 11644 \$18.99

Slip 2000 Carbon Killer provides you with a safe, effective way to clean carbon, lead and plastic wad fouling. Unlike other gun cleaners, this product is non-

flammable, non-hazardous and biodegradable. Designed for soaking metal parts with baked on carbon, Carbon Killer dissolves carbon and lead on contact. **NOTE:** Carbon Killer is for cleaning internal metal gun parts with baked on carbon by soaking them. It is an aggressive cleaner and should not be used to clean the outside of your gun. It can damage and even remove some finishes.

16 Oz. 19234 \$21.99

Slip 2000 EWL30 has the same properties as EWL, except it is a lot thicker. It contains a proprietary thickening agent that makes this lubricant consistency like a 30-weight motor oil. It was designed for those who want or need a lubricant that will not migrate at all and don't want to use a thick grease.

4 Oz. 11645 \$18.99

Slip 2000's Extreme Cleaning System contains 2 Oz. bottles of: Carbon Killer Bore Cleaner, 725 Gun Cleaner Degreaser, and EWL Extreme Weapons Lubricant.

11652 \$25.99

Slip 2000 Copper
Cutter is specially
formulated to remove
copper, lead, powder
residue and plastic
wad fouling from bore
surfaces with little
scrubbing! NOTE: It is
a water based, ammonia enhanced product
and will remove all
lubrication or oil
protection, so always
re-lube all parts cleaned.

4 Oz. 11646 \$11.99

Slip 2000's **AR Cleaning System** contains a 7 Oz. bottle of Carbon Killer Bore Cleaner, a 15cc syringe of Extreme Weapons Grease, and a 1 Oz. bottle of EWL Extreme Weapons Lubricant.

11676 \$19.99

Each Slip 2000 **Gun Wipe** packet contains one 5" x 8" wipe treated with Slip 2000 Synthetic Gun Lube. Perfect for wiping your

guns down after a day on the range or while out on a hunt.
Apply to all metal surfaces. Great for light carbon cleaning. Safe for all firearm stocks and grips.

20 Pack 11674 \$14.99

Extreme Performance Lubricants

TW25B is the choice of leading firearms manufacturers, armorers, pro shooters and gun enthusiasts, and is recognized as the world's best all-purpose weapons lubricant/protectant. It is now widely specified by the U.S. military for their most critical performance weapons systems. Environmentally safe, non-carcinogenic, non-ozone-depleting.

 0.5 Oz. Syringe

Shoot Out Targets

he Alpha Target is Shoot Out Targets' Patent Pending instant-reaction target system that can be reused again and again to improve your marksmanship. All Shoot Out Targets are made of durable cardboard that has been tested to withstand 1000plus shots. Unlike clay pigeons that can only be used once, the Foam Medallions are durable and able to self heal for longer-lasting use, allowing for up to 40-plus shots per medallion. Each foam medallion is 3" in diameter and 1/2" thick. With the easy-to-see foam medallions you will get an instant kinetic reaction with every hit. Shoot Out Targets are proudly made in the USA, reusable for hours of fun and can be used with all-caliber firearms and airguns. The target stands 43" tall and 22" wide when assembled.

By Duane Thomas

In this article we're going to discuss the Ammo Can from X-Treme Bullets. When you count the various cartridges and bullet weights for which Ammo Cans are available, it's into the low double digits, but we're going to focus on their version containing 1,500 .45 ACP 230-grain Round Nose Copper Plated Bullets.

These days, plated bullets are hugely popular, they've largely replaced both bare lead bullets and true jacketed bullets among serious, high-volume handloaders, since they avoid the barrel leading issue of bare lead bullets while still being less expensive than jacketed. As a cost-cutting measure, and a huge reason plated bullets are more affordable than jacketed, they're made with a soft lead-wire core, which is then covered with plating. Typical thickness of a true bullet jacket is .011" to .012". According to the fine folks at X-Treme Bullets, the plating on their standard bullets, which is what are sold in most Ammo Cans, goes between .005" to .007". So, in plated bullets in general, we have relatively thin plating around very soft lead bullets. (X-Treme has a "heavy plated" line going .008" to .010", as well. They also make jacketed bullets, and offer some jacketed bullets in Ammo Cans, but here we're focusing on the standard plated .45 ACP jobbies.)

We seem to be caught in a cycle where, every four years, we have a run on 9mm hardball, both in loaded ammunition and reloading components; it becomes hard-to-find, and extremely expensive when we can find it. It is a sad truth that .45 ACP is not nearly as popular a cartridge as it used to be. We live in a 9mm world. The happy part about that, however, is that even when 9mm reloading components are made of pure Unobtainium, or, if we can find them, they might as well be made of platinum given what they cost, we can

still find .45 ACP reloading components. We'll pay a bit more than in normal times, but they're still there to be had. For instance, X-Treme .45 ACP bullets have been constantly available all throughout the current situation. A lot of my own shooting in recent months has switched over from 9mm to .45 ACP simply because I've been able to get the components.

One of the options for buying from X-Treme is 1,500 bullets at a time in what they call their Ammo Can. I was very fortunate while researching this article to be able to interview Shane Sanemeterio, the Operations Manager at X-Treme Bullets. According to Shane, the Ammo Can was introduced in the August/September 2020 time frame, "as a way to get our bullet boxes, and bullets, to customers in the same shape as when we sent them."

The problem is that boxes of .45 bullets are heavy. For instance, an Ammo Can of 1,500 .45 ACP 230-grain Round Nose bullets weighs in the mid-60-pounds range. The conveyor belts used in places like UPS service centers regularly drop packages two or three feet. Even given the double-thick cardboard boxes X-Treme was using as shipping containers, what would happen when a customer ordered multiple 500-bullet boxes, was the boxes inside the boxes would break open. Then the bullets would batter into each other, puncturing the plating and exposing the soft lead underneath, which would then degrade as bullets rubbed against each other, and the customer would open the shipping box and find the contents coated with black residue.

Dan Kash, the owner of X-Treme Bullets, oversaw the Ammo Can project. Since Dan also owns Freedom Munitions and LAX Ammunition – and since X-Treme, Freedom and LAX are all located in different states – that allowed testing various packaging approaches by making shipments of bullets from X-Treme to the other companies, to see how they survived the process. Using metal ammo cans instead of cardboard boxes was an idea they came up with pretty early-on. At first, they tried just shipping loose bullets inside the Ammo Can, but they found, when they opened the Ammo Can after shipment, its inside was coated with black residue because the bullets still moved around inside the can. Then they tried putting the bullets in a plastic bag inside the Ammo Can... which at least contained the residue inside the plastic bag but didn't stop the process.

Finally, it was discovered, if they placed two 500-round, cardboard bullet boxes inside a .50 caliber ammo can, the narrow side of the boxes up, that would fill the can from side-to-side, though there was still a bit of airspace longitudinally. Then, if they laid a third 500-round bullet box, flat, on top of that, when they closed the Ammo Can lid it would touch the lid of the top bullet box and compress the entire stack enough it wouldn't move in shipping. Thus, when customers open their X-Treme Ammo Cans, they find three 500-

round bullet boxes, 1,500 bullets, sitting there staring at them in the exact same condition they were when they were shipped. The fact the dimensions of the bullet boxes worked perfectly for that was a total coincidence, by the way; these have been the dimensions of X-Treme bullet boxes since way before the Ammo Cans even existed.

It doesn't matter what sort of bullet you're ordering, X-Treme puts them in the same-size, 500-round cardboard boxes. This works out well for shipment in the Ammo Can. Though larger bullets, like for instance 230-grain .45s, weigh a lot more than smaller bullets, they almost completely fill the boxes, so they don't move around inside them during shipping. Though smaller bullets, like 9mm 115-grain, are much smaller thus allow more airspace inside the bullet boxes, so they move around more inside the boxes during shipment, the bullets don't weigh nearly as much, therefore they don't batter themselves the way heavier bullets can. One way or another, the Ammo Can works.

The first things you'll notice, when ordering an X-Treme Ammo Can online, are:

1. It's modeled on the military steel .50 caliber ammo can. (X-Treme does use smaller .30 caliber-sized Ammo Cans for single-box orders, which sadly does allow more airspace around the box than the three-boxes/.50 caliber Ammo Can system. The .50 caliber Ammo Can/1,500 bullets approach really is the way to go.) This is good, since steel ammo cans come in so

handy for storing things, serious shooters have traditionally used them as an all-purpose storage device.

2. Its color. At variance to milspec ammo cans which are green, the X-Treme Ammo Can is a dark, rich, reddish maroon. X-Treme's "company colors" are red and black. Since certain other companies were already marketing their own ammo cans styled to look like military ammo cans but made of black plastic, and X-Treme wanted to do something of their own, unusual and distinctive, they decided to go for red. The thing is, a lighter, more-normal reddish color, when it gets sun-bleached over time, turns pink. There was the concern their male customers probably wouldn't want pink ammo cans. A darker red survives sun-bleaching, and keeps its color over time, much better.

The Ammo Cans have been quite popular. Shane commented, "The Ammo Can is a really good, consistent seller. It gives customers a little bit of a price break, it's still affordable, and it's less than they'd pay if they just bought three individual 500-round boxes. And they get the Ammo Can. So, once they've loaded ammo,

they can still use the Ammo Can, put their loaded ammo in it, and head out to the range. A lot of our Ammo Can buyers are repeat customers. So, they must like it; some people are getting a pretty good collection out there."

The X-Treme Ammo Cans, the actual containers, are made in China, and Chinese ammo cans in general have a reputation for being not that great.

It's not uncommon to find "ammo cans" where corners that should be 90-degrees aren't; lids won't seal well because both the lid and top of the can are out-of-spec; the rubber gasket is poorly located thus won't seal. Though the cans are made in China, X-Treme buys them through an American company; also, that's where the X-Treme company name and logo get stamped into the side of the container. Maybe "Chinese ammo cans" are like everything else: there are good ones, and bad ones. Or maybe the American company has made it clear the level of quality in manufacture they will and won't accept. All I can say is, the X-Treme Ammo Can is a well-made example of the breed: corners that should be nice and square, are; the lid and the top of the can, line up; and the gasket seals.

So, when you buy an X-Treme Ammo Can, you get 1,500 rounds of well-constructed bullets, packed and shipped in such a fashion they will get to you still in the shape they were when they started out, AND you get a very useful steel ammo can, for your future storage needs, to boot. Such a deal.

acquisition of a scout-style rifle. This means your rugged outdoors life just got a whole lot better

Designed for quick snap shots at a target, the Scout Squad" is packed with all the standard features that make the MIA" great, plus new features like a specially designed muzzle brake to help tame recoil. The M1A™ Scout Squad™ gives you the maneuverability of a scout rifle with the same power and features of a legendary American rifle.

uilt for speed, these High Performance red dot sights will take Byour shooting ability to the next level. By using a single red dot as an aiming point, target acquisition is as simple as point and shoot. The unique Heads-Up-Display (HUD) design provides an unlimited field of view, while eliminating obstruction and tunnel vision common to tube-style scopes.

Scout Scope Mounts

S cout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle 25374 \$79.99 Scout Scope Mount for SKS Rifle 25373 78.99

ike pretty much everything from Berry's Manufacturing, this 9" x 12" x 10" deep stackable utility box is made in America and covered by a lifetime warranty. The box is designed to stack and is great for storing bulky items. If your gun room/garage looks anything like ours, these will help you get organized. So, whether you're looking to store shooting accessories, ammo components, or car parts (we have more than our share of all of the above) these boxes are ideal. The best part is that they're transparent, so when you fill them, you don't have to open the WHOLE stack to find what you're looking for.

Stackable Utility Box 40194 \$20.99

Berry's Pistol Cases are as tough as they look. Available in a desert tan color, they're injection molded out of high-impact polypropylene and contain high-density crate foam to provide a soft, protected bed for your firearm investment. They're TSA approved when appropriate locks are added. Available as a single-pistol or double-pistol case, they carry a lifetime warranty and are made in the USA.

ENHANCED LIBERATOR HP 2.0

Next Generation Multi-Mode Hearing Protection! The Liberator® HP headset is the next generation in electronic hearing protection, offering crisp, clear audio in a durable, scratchresistant, slim earcup.

Liberator HP 2.0, BLK 40197 \$299.99 Liberator HP 2.0, FDE 40198 \$299.99

26dB

• Three distinct hearing protection modes:

1. ENHANCED MODE – Blocks dangerous impulse noise, while enhancing nearby speech and audio.

2. MOVE MODE – Blocks all external noise.

3. CLARITY MODE – Blocks all external noise, while enhancing nearby speech and audio.

- Slim earcup design layered with sound barrier technology.
- High-definition speakers with enhanced electronics.
- Speed-change battery compartment works with either two AAA batteries or one CR123 battery.
- 160-300 hour run time (mode dependent).
- Easily converts to behind-the-head or helmet-mount suspension (available seperately from Safariland).

Jobody likes to think about it, but should a serious hunting/ shooting accident occur, chances are the drugstore "first aid kit" you have stashed under the seat of your truck won't do much good. That's why we're offering individual first aid kits from The Tactical Medic. The Econo-IFAK contains a 4" Emergency Bandage, a TK-4 Combat Tourniquet, 1 Package of Rolled Gauze, 1 Roll of Medic's Tape and 1 Pair of Nitrile Gloves. The Micro Kit #2 contains a 4" Pressure Bandage, 1 Package of Quick Clot Gauze, a TK-4 Combat Tourniquet, 1 Roll of Medic's Tape and 1 Pair of Nitrile Gloves. Econo-IFAK (at right in photo) \$19.99 Micro Kit #2 (at left in photo) 39.99
