ATTENTION DILLON CUSTOMERS: Because of changes to California's Proposition 65 that took effect on August 30, 2018, companies doing business in California are mandated to provide warnings on products that may expose Californians to any one or more of a list of approximately 900 chemicals, including Lead, which are "known to the State of California to cause cancer, birth defects or other reproductive harm." The new regulation states that a warning must be "provided in the catalog in a manner that clearly associates it with the item being purchased." Though we have no reason to believe our products could cause harm when used as intended, we now include the appropriate Proposition 65 warnings on some of our products to meet the California "safe harbor" requirements.

Dillon's Bill of Rights for Reloaders

All of Dillon Precision's customers have certain inalienable rights when they buy a reloading product:

- 1. Right of Quality** – YOU THE CUSTOMER have the right to expect a well-designed product, manufactured with quality materials and workmanship that does what the seller claims it will do.
- 2. Right to Test and Send-Back** – YOU THE CUSTOMER should have the right to test the product on your own reloading bench for at least 30 days, and if it does not live up to your expectations, send it back for a full refund.
- 3. Right of Service** – YOU THE CUSTOMER have the right to free, friendly, expert service and technical advice available through a toll-free phone number. This service should include prompt replacement of broken or bad parts – free of charge.
- 4. Right of Warranty** – YOU THE CUSTOMER have the right to a lifetime warranty on any non-commercial-grade reloading product you purchase. *Unfortunately, we can't offer this warranty on textile products and electrical or electronic components.*
- 5. Right to be Heard** – YOU THE CUSTOMER should have the right to speak to someone of authority anytime you can't get satisfaction through normal channels. If our sales representatives aren't able to help you, our supervisors have a mandate to take customer-satisfaction issues all the way to the owner of the company if necessary.

Editor's Note: The Bill of Rights for Reloaders is Dillon Precision Products' customer-satisfaction policy. It remains very much unchanged from the day the company was founded. The disclaimer about textile products and electrical or electronic components reflects the reality of how those products are produced in today's world. Ultimately, our founder recognized that satisfied customers are our best advertising, and the only thing that differentiated his wcompany from all the others at the time was the warranty and customer service he offered.

We constantly strive to live up to his standards.
Please let us know if we're not succeeding.

All the electrical and/or electronic components of Dillon equipment and all Dillon textiles are covered by a one-year warranty from date of purchase. Any modifications performed to Dillon machines, or the addition of any unapproved equipment, including automated or mechanical add-ons from other manufacturers, is expressly not recommended and will void the Dillon warranty.

CP 2000[^]

Dillon's DEDICATED Case-Processing Machine!

- Made in the USA
- Eccentric Roller Bearing Drive System
- Smoother Operation, Less Effort
- Higher Throughput, Lower Cost Per Case
- Heavier Frame for Greater Rigidity
- Seven Threaded Stations for More Flexibility
- Upgraded Primer Pocket Swager
- Primer Pocket Swage Available in Two Stations
- User-Replaceable Swage Rod Tip
- Reinforced Toolhead Bolt & Washer
- Improved Shellplate Indexing System
- Processing Speed up to 2000 Cases Per Hour

Designed to complement our RL 1100 and Super 1050, the CP 2000 offers higher speed, greater versatility and added case processing capability...all at a much lower cost than dedicating a RELOADING machine to prep brass! If you're loading mass quantities of ammo, the CP 2000 will make your task MUCH easier.

Rapid Trim 1500 Case Trimmer[^]

Dillon's
RT 1500
shown
installed
on an
XL 650.

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1500 is equipped with a quick-disconnect

power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer **62164** is **\$425.00**. (Available only in 110 volt 60 Hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, **13141**, are **\$25.00** each. Upper lock rings, **13559**, are **\$9.00** each.

MILITARY BRASS?

**Eliminate the "Grunt Work" with
Dillon's Super Swage 600**

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

6.8 SPC Back-Up Rod	62124	\$27.00
9mm Adapter	62168	20.00

Case Preparation Equipment

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is one of the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour. Not only is our capacity greater than most, but our motor is also larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine! The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media. We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners. The solution was an injection molded reversible part. Simple, and it works great. Our device is large, 10" x 14",

Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

8 oz. bottle.	13804	\$9.99

CM-500 Case/Media Separator ^	21045	\$80.00

and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench. It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon created the CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit. Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Dillon's **D.C.L.** non-aerosol case lube is easy to use. Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

An Eye on Optics

Pros & Cons of Optics for Your Conceal-Carry Gun

A brand-new shooter gets ready with a Holosun red dot on a 9mm Walther PDP during Ladies Night at Glock Store in Nashville, Tennessee. Using a red dot helps rule out sight-alignment errors when diagnosing marksmanship challenges.

By Maureen P. Sangiorgio, NRA-Certified Firearm Instructor/Range Safety Officer, Photos by Oleg Volk

Used for decades by the military, optics allow for very rapid target acquisition because they remove the problem of trying to focus on three things at the same time – the front sight, the rear sight, and the target. You just place the dot, or crosshairs, on the target, and you're good to go.

I recently purchased an AR-style 9mm rifle online, and had it shipped to a local FFL. The staff there is very knowledgeable, so I had them do some modifications to it, including installing front and rear iron sights, in

addition to a Holosun red dot sight (fueled by a cool solar panel). First time out, I shot the bullseye out of the target. Works for me!

But so many of the traditional sights are designed for rifles and shotguns, making them too large and bulky for handguns. Well...that was then, this is now. Today, many major optics manufacturers offer compact sights that are ideal for handgun use. And many of them are customizable, which means you can set them to “high” or “low” depending on how much light intensity you prefer. Read on to find out if placing sights on your ECC is a good fit for you.

Pros

Boosts focus. When I was shooting IDPA, and the instructor changed to the “bad guy” target, a fellow shooter let me borrow his handgun, equipped with red dot sights. I very quickly discovered how much faster I was able to focus on the bad guy’s center mass, thanks to those sights. I didn’t have to line up the front sight, rear sight, and shift focus. I just lined up the red dot on the target and blasted away!

Cuts time. Thanks to those red dot sights, I also noticed that I was able to shoot much more quickly, getting off more rounds in the same amount of time, before I heard the buzzer. This is the primary reason so many shooters enjoy red dots both from a tactical and competitive point of view. The optics really speed up target acquisition time, and time to the first shot. In a self-defense, panic situation, decreased target acquisition time could mean the difference between life and death.

Helps aging eyes. Oh BOY could I relate! As folks age, our eyes change, and sometimes it’s difficult to see the front sight clearly. That bright red dot makes shooting easier for people of all ages to continue their passion; no limitations or reason to put that gun down for good.

Increased accuracy. Besides shorter target acquisition time, increased accuracy is the other top reason those red dot sights are growing in popularity. I have also read many testimonials from other shooters, especially hunters, who found when shooting long distances with their pistol, they shoot much more accurately at 25 yards or more, thanks to their optics. Similar to short target acquisition time, accuracy is key in a self-defense situation.

Cons

Sights could be bulky. I am on several sport shooting enthusiast Facebook groups. It’s not only my job to keep up on what’s affecting fellow shooters, but I often pick up tips. If it’s one thing I’ve noticed on these sites, it’s that many people struggle with finding a comfortable pistol/holster combination to wear under clothing. It’s rough enough to comfortably conceal, but place a hard, metal object on the top of your pistol, and you’re making matters more difficult. I’ve even had several of my gal pals tell me when they added sights to their pistols, it rubbed against their skin, causing chafing. The good news is many major holster manufacturers realize how popular red dot sights are becoming, and they are taking them into consideration when designing their new holsters.

The KelTec P15 is optics-ready by design. An RMSc sight extends this pistol’s effective range against a silhouette target to 100 yards.

STI 9mm with a red dot and light/laser: a high-performance kit for high-threat environment.

Canik TP9EC with a Venom red dot: speed and accuracy on a moderate budget.

Glock 17 with a red dot allows this officer to scan the environment without fixating on the front sight.

Optics-ready Faxon Firearms slide brings additional sighting options to S&W M&P Compact model.

Iron sights only: self-illuminated irons on a GLOCK 17 help this student focus.

Glock 48 with RMsC red dot: slim carry package with substantial effective range.

Sights are expensive! When I saw I had to add sights to my 9mm rifle, I almost fell off my chair when I started doing the research on their price tags. I couldn't believe how expensive they were! Plan on spending several hundred dollars for your sight, then add labor on to that. If you have to mill a slide to accommodate a red sight, plan on spending about \$150 just for that.

Get ready to practice, practice, practice.

Even if you add red dot sights to a gun you're familiar with, be prepared to spend time practicing shooting with them. I have found that shooting with a red dot sight is different than training with an iron sight, and my students have told me the same thing. Keep in mind that if you're training for a self-defense

Here is a partial list of popular optics manufacturers:

AmeriGlo
Burris
Bushnell
Crimson Trace
Dawson
EOtech
Holosun
Leupold
Nikon
OpMod
SigSauer
Trijicon
TruGlo
Vortex

situation, set up your target no more than about 10 yards. Some shooters find they have to hold their gun at a slightly different angle when shooting with red dot sights. And don't forget the change in mindset – now you will be shifting from focusing on the sights, to focusing on the target.

At the end of the day, when you're deciding whether or not you should add optics to your ECC, it should all come down to how comfortable you can physically wear a pistol with red dot sights, and how well you shoot at bad-guy targets at close quarters. As the old saying goes – practice makes perfect, especially when you're forced into a position to save someone's life, such as your own, or the life of a loved one.

Dillon Automation's DA 3000

For Dillon Precision's CP 2000 and RL 1100

Introducing the new Dillon Autodrive 3000!

- Fully automates the Dillon Precision CP 2000 and RL 1100.
- Case Preparation rate up to 3000 rounds per hour!
- Reloading rate up to 2000 rounds per hour!
- DA 3000 easily installs on your Reloading and Case Prep machines.
- Simply press the "Start" button – no more manual cycling of the machine.
- Adjustable Cycle Rate and Dwell.
- Dillon custom-built Industrial Controller.
- Integrated safety controls and shield.
- Field-tested and proven patented design.
- One-year warranty on the DA 3000.
- Maintains your Dillon-Factory machine warranty.
- Made in Scottsdale, Arizona USA.

Mr. Bulletfeeder®

by Double-Alpha

Mr. Bulletfeeder has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy – a world leader in practical-shooting-related product manufacturing and distribution – at the helm. The design allows the bullet collator to be mounted onto the casefeeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

DILLON RIFLE COMPANY

The OPAR Operator Trigger is a complete-assembly pre-stage drop-in trigger purpose built to provide improved trigger pull weight, reset, clean feel, precision, and safety for day-to-day users, military and law-enforcement members and agencies. The trigger's form enhances precision capabilities through its Area-of-Engagement design. This is accomplished by helping shooters build muscle memory for their trigger-finger placement in a simple and natural way.

It has a clean 5.0 to 5.5-pound trigger pull weight with a short trigger reset. The OPAR Operator's patent pending pre-stage trigger mechanism design has an inset secondary trigger providing an additional safety mechanism to reduce the chances of an accidental discharge. The OPAR Operator is compatible with AR-15 and HK416 rifles using the Mil-Spec 0.154-inch pins.

Dillon's Range Bag[^]

33389 \$139.99

Borrowing design features from Dillon's original range bag, but with upgraded metal D-rings and clips for the shoulder strap, Dillon's "Retro" Gray Range Bag is constructed of heavy-duty ballistic nylon.

The primary compartment measures 14-1/4"x7"x8" and features two interior pockets measuring 6-1/2"x6-3/4" with hook-and-eye closure flaps. An additional interior pocket measures 5"x7-1/2".

The top cover can be quickly secured via hook-and-loop strips at the end or by two side zippers.

There are two zip-up outer compartments measuring 12"x8"x1-1/2". One of the outer compartments features extra padding for carrying a handgun, and the other has an external zippered compartment for pens, pencils, etc.

"Border Shift" Ammo Bag[^]

Dillon's two-compartment ammo bag is constructed with a flexible inner liner that will allow the entire volume to be accessible from either zippered opening. You'll never again mix fired brass with loaded rounds!

Border Shift Ammo Bag, Black	13755	\$39.99
I.D. Card Holder [^]	14575	2.99

Dillon Pistol Case[^]

Our pistol case was designed to hold and protect your pistol and carry 200 rounds of ammunition! The back side of the durable, ballistic nylon case features two pockets that will accept Dillon's 100-round ammo boxes. The case features a heavy-duty, locking YKK zipper, closed-cell foam padding and a suede-textured fabric liner to protect your pistol's finish. Measures 14" x 9".

12709 \$39.99

Beyond Stupid: Guns in Hollywood

By Alan Korwin

It's time to lighten up a bit with this month's column on stupid things mass media puts on our screens about guns. Because it's harmful, it's hard to take lightly. We know so-called "news" about guns borders on 100-percent FALSE. Hollywood is driving ignorance, unsafe

practices and crime with its totally phony firearm portrayals. It's just screamingly funny when you consider all the examples and think about it. How dumb can they be?

Standing Silhouetted in the Doorway

It may be dramatic when a curvy leather-clad babe jumps into a doorway, well lit and poking her gun in front of her, but that's how you get yourself shot. Assuming there is an armed villain waiting for the heroine (or hero, men do it all the time too), you make yourself a perfect, highly visible target when you stand there nicely framed. It's how you attract gunfire, not avoid it.

Jumping From Cover in a Well-lit Tough-guy Stance

A dangerous close second to standing framed in a doorway is simply abandoning cover so the camera angles are good and you show yourself off to the adversary.

Presenting any High Profile at All

The reason the Weaver stance is preferred by combat-oriented folks is that you present a smaller profile to a person shooting back at you. Giving the enemy a smaller target can save your life. Standing full square in the isosceles stance may seem natural, and dramatic, but getting shot is undesirable. Weaver is also more stable. Watch for movie stances (and grip!), it's instructive. Of course, in real

gunfights, age-old wisdom applies: "If you have a good grip, good sight picture and proper stance, you're not using cover correctly or moving enough." Movies and TV get nowhere near this but could, and educate us, without losing any production values.

For Hot Action and Tense Drama Show Real Pie-out

To more safely check out spaces where armed bad guys may await, from cover or concealment take a quick peek and pull back, getting a latent mental image of a thin slice of the room. A piece of the whole pie. If it's clear, do it again, but with a bigger pie slice, knowing the first section is likely clear. Several quick and careful pie slices enable you to tactically engage the room, not stupidly making yourself a bullet magnet. It's how trained individuals "pie-out" a room. It's adrenaline pumping, life-or-death quick action, perfect for film, if script writers and directors knew anything and used their knowledge.

Spray and Pray (shooting blindly)

This one's easy, you see it a lot, and media loves ironic rhymes. Because gunfire is seen as an exciting high value to producers, they blow through ammo like it's M&Ms with shiny shells. A top safety rule applies: "Know your target and what's beyond it." Real

gunfights, more tense than any of this, are typically over quickly with few shots fired.

Emptying Your Firearm at a Wall or Closed Door

A close second to spray-and-pray, this often gets bystanders shot to death. As an added feature, the sprayers get shot when their guns run dry. D'oh!

**"Because gunfire is
seen as an exciting
high value to
producers, they blow
through ammo like
it's M&Ms with shiny
shells. A top safety
rule applies: 'Know
your target and
what's beyond it.'"**

Dillon Die Sets

Sizing/Depriming Die (Pistol)

Our sizing/depriming dies feature a "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design is the long, tapered carbide ring with a radiused opening. That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die (Pistol)

Our quick-disassembly seat die allows the user to disassemble and clean the seating die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem. Dillon's double-ended design makes it simple to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time.

Crimp Die (Pistol)

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

Sizing/Depriming Die (Rifle)

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die (Rifle)

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die (Rifle)

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

BL 550[^]

Dillon's Basic Loader

\$395⁰⁰
15399

Reloading Dies and Caliber Conversions sold separately
Pictured with optional accessories:
Strong Mount 22051 \$95.00

Dillon's RL 550 has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles. The BL 550 is essentially an RL 550 without the automatic priming and

powder systems. Capable of loading over 160 calibers – just like the RL 550 – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550 loader! The interchangeable toolhead (Page 25) makes it quick, easy and inexpensive to change calibers.

AUTO PRIME SYSTEM[^] 16627 \$120.00

PRIMER SYSTEM EARLY WARNING[^]

Allows you to focus on loading instead of worrying about failing to seat a primer, and is an easy slip-on attachment to the auto prime system. 20302 \$37.00

AUTO POWDER SYSTEM[^]

Accurate to within 0.1 grain, our Automatic Powder Measure is world renowned for its charge-to-charge consistency. 20251 \$130.00

OPTIONAL MAGNUM RIFLE POWDER BAR
21353 \$45.00

AUTO EJECT SYSTEM[^]

Greatly increases your ammo production capabilities and adds a Cartridge Chute/ Bracket and a Cartridge Bin to your reloader. 22120 \$43.00

BL 550 POWDER DIE[^]

Extra powder dies for your BL 550 make it easier to set up additional toolheads for loading different calibers.

Powder Die: 16629 \$27.00
Oversize Die: 16626 29.00
Plastic Funnel: 16617 9.00

POWDER MEASURE ADAPTER

If you load rifle cartridges with long-grain extruded powder, you can now use any manufacturer's powder measure with 7/8" x 14 threads on your RL 450, AT 500, BL 550 or RL 550. (Requires the use of an RL 450 powder die – see below.) 20029 \$32.00

RL 450 Powder Die 20308 32.00

Shooting Mat

Dillon's shooting mat is made of tough ballistic-weave nylon fabric, with a large skid-resistant elbow pad area. The "ground" side is moisture resistant and wipes clean easily. The padding is dense, closed-cell foam to provide both shooter comfort and a stable shooting base. The mat is equipped with a shoulder strap, a carry handle and two straps with snap-release buckles.

Dillon Reloading Accessories

A Strong Mount increases your machine's "footprint" to over 10", spreading the load over the whole bench instead of stressing the leading edge. For XL 750/650 owners with limited overhead clearance, the XL 750/650-only mount raises the machine 6" above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL 550/XL 750/650	22051	\$95.00
XL 750/650-only	22052	93.00
"SDB"	22223	105.00

These plates bolt directly to your bench top, and are drilled and tapped to allow mounting your reloading machine directly to the top of the mounting plate.

Stock #62005, \$95.00 is for:

XL 750, XL 650, RL 550 and Square Deal "B". **Stock #62006, \$95.00** is for:

RL 1100, CP 2000, Super 1050 and RL 1050 as well as any Dillon reloading machine that is mounted on the Dillon Strong Mount.

Our Bullet Tray is a simple, shallow aluminum tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL 550 and XL 750/650 when equipped with the RL 550/750/650 Strong Mount, and a separate kit is available for the RL/Super 1050.

Bullet Tray Kit	22214	\$60.00
1050 Tray Kit	22215	60.00

The Low Powder Sensor provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

"D-TERMINATOR" Electronic Scale

- 1500 grain/100 gram capacity
- Accurate to 0.1 grain/0.01 gram
- Uses four AA batteries (included)
- Comes with its own AC adapter
- 100g scale check weight included

NOTE: Dillon electronic scales are covered by a one-year warranty from date of purchase.

\$149.99
10483

Dillon's **"Belted Magnum" Powder System** features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

97126 \$205.00

The **Powdercheck System** (available for XL 750/650 and Super 1050 reloading machines) sounds an alarm if the powder charge in a round is out of limits either high or low.

21044, \$93.00 each

An **Aluminum Roller Handle** gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

17950 \$64.00

Dillon's **1" Bench Wrench** fits our 1" Die Lock Rings which give you more space on the toolhead.

10842, \$15.00 each

Our **Machine Maintenance Kits** come with everything you need to keep your Dillon loader cleaned and lubricated up to factory specifications. Available alone or in combination with a spare parts kit for your machine.

Lyman Neck Expander Die

Improves accuracy of cast and jacketed bullet reloads. Extends case life. A "Must-Have" die for the cast bullet or flat-base bullet user. The first step expands the inside of the case neck to just under bullet diameter for precise case neck tension in the finished reload. The second step expands the case mouth to bullet diameter or slightly over. This allows the jacketed or cast bullet to be started perfectly centered in the case mouth and properly aligned with the axis of the case neck. By adjusting the

plug slightly deeper, the second step also provides a slight flaring of the case mouth for reloaders using cast bullets.

Dillon AkroBins[^]

AkroBins are ideal for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550/XL 650/750 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Dillon Utility Boxes[^]

Dillon's Utility boxes are ideal for all those accessories that don't quite fit into the compartments of your shooting bag. The large box measures 13-1/2" x 5-3/4" x 2-1/4" and the small box measures 4-5/8" x 6-3/8" x 1-5/8". Use them for cleaning gear, extra magazines, repair parts, first aid supplies, reloading accessories and tools – the list is endless.

Handling components, ammunition, cleaning firearms or discharging firearms in poorly ventilated areas may result in lead exposure. Have adequate ventilation at all times and wash your hands thoroughly after exposure.

Shellsorter

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

KelTec's highly configurable P15 replaces both P11 and PF9 models.

KelTec P15

By Oleg Volk

I first handled an early P15 prototype in late 2019. It was an odd-looking polymer-framed pistol that had little visual grace. I picked it up and the looks were forgotten – it was one of the most comfortable-feeling handguns I ever had handled! The trigger was good too, light and crisp, with a clear reset.

More than a year later, a pre-production sample arrived. While most P15s will be made with polymer frames, a limited run will have aluminum frames – my sample was one of them. Weighing in at just over 19

ounces with the flush-fitting 12-round magazine and a robust RMsC red dot, the pistol felt solid and old-fashioned. Other than being striker-fired and set up with an optic, it reminded me of 1970s aesthetics. The odd look isn't limited to the forms: the two-piece slide is steel in the front, aluminum in the back. I had no idea of what to expect at the range but, fortunately, my range starts at the back door of the home office.

The 4.5-pound trigger is wide and smooth, giving a feeling of a lighter pull. Compared to the long and heavy P11 trigger, it is night and day. A fairly long even take-up

The P15 is only 7/8-inch thick.

Above & Below: Production pistols have a much neater captured dual recoil spring. These photos show expedient pre-production parts.

The frame design is quite simple.

and an equally long reset aren't typical for striker guns but proved very helpful to accuracy. With the red dot to aid the process, doing quick and consistent headshots proved an easy task out to 30 yards. Silhouette hits remained fairly reliable out to 100 with 124-grain Federal Syntech ball. A backup notch on the red dot sight combined with the plain textured gave a good sight picture too, entirely sufficient for silhouettes at 50 yards.

The barrel axis is higher than on most pistols, so the muzzle flip is relatively pronounced but felt recoil is correspondingly reduced. The pistol feels like a match

revolver with a tuned trigger more than like an auto-loader. Split times, at least in my hands, were longer than with Sig P365 but practical accuracy was terrific. The pistol points very naturally, so silhouette hits at 25 yards were easily done with just point shooting. I found that the long trigger reset didn't hold up rapid hits the same way that actuating a pump shotgun slide doesn't slow down the process: by the time the pistol came back down on-target, the trigger was already reset.

Swapping flush-fitting magazine for the extended 15-round version improved control greatly. The extra

Top left of the frame features a three-position rotary switch (see *inset at right*) controlling the magazine disconnector and the grip safety.

half-inch of extended floorplate blends perfectly with the grip, letting the pinky do its job, so muzzle flip came down to the more expected level. Accuracy remained superb. Compared to the PF9 and P11, this pistol is easier to shoot well and far more comfortable. The trip is aggressively textured to promote retention with sweaty hands.

With the slide removed, we can access one of the most unusual features: the safety selector. One-third turn of the selector located at the back right side of the slide rails turns off the magazine disconnector. I have no use for that

feature, but some states and organizations require it. A second turn would have turned off the grip safety, while a third would have re-enabled both. I can appreciate a well-implemented grip safety like this one, so it stayed enabled. This safety only locks the sear without affecting the slide motion like on the XD series.

Set up with a polymer frame, the P15 is even lighter and thinner. At 14 ounces with a 4-inch barrel, it's impressively thin – just 7/8 of an inch – despite the double-stack magazine. A non-snag Hi-Viz tritium/fiber optic front sight with a fully adjustable two-dot tritium rear make for a very sharp

Highly textured backstrap promotes retention.

Unusual two-piece slide construction uses aluminum for the less-stressed areas to reduce weight.

The P15 boasts an excellent smooth trigger, a great help to practical accuracy.

The magazine release is well textured but out of the way.

Forward slide serrations come in handy on an optic-equipped pistol.

On the production version, the dovetailed front sight post is illuminated with a fiber-optic pipe.

sight picture under all circumstances. Eventually, the gun will be offered with 3, 4, or 5-inch barrels, permitting a variety of configurations, from a short 12-shot subcompact to a long 15-shot belt or competition gun. My pre-production sample came with a smooth dust cover; production guns all have accessory rails. Similarly, the dual recoil spring looks less improvised in the final variant.

I had zero failures of any kind with a variety of target and defense ammunition. Fieldstripping is a matter of pulling the slide part-way back and pushing out a retaining pin. It's a very efficient pistol: compared to

the GLOCK 19, a gun of the same capacity and barrel length, the mainstream polymer frame P15 is 0.7 inch shorter overall, 1/8 inch less wide, and lighter by more than a third.

While the P15 resembles other historic guns in some details, its novel combination of features produced a very effective, easy-to-carry pistol. It's been incrementally refined for several years before commercial release, so all the kinks appear to have been ironed out long before the pre-production run. I can hardly wait to try out the longslide.

All-in-One Torque Driver Kit

Featuring the Fix It Sticks All-in-One Torque Driver. Tighten down your scope rings, mounts, actions screws, etc. while in the field, at the range, or at home.

Kit includes: All-in-One Torque Driver (15 - 65 inch lbs); T-Way T-Handle Wrench; 15 different bits: T10, T15, T20, T25, [hex 3/32, 5/64, 1/8, 5/32, 3/16, 2.5mm, 3mm, 4mm, 5mm], P1, slotted #5; 1/2" Socket and 1/4" bit adapter set; and Zippered case with Molded Holder.

29835 \$112.00

Replaceable Edition Shooting/Hunting Kit

This kit offers unmatched portability, functionality and versatility. Two Fix It Sticks (which combine to form a T-Handle) and 16 bits are held in a molded bracket for portability/storage. Extra room on each end can hold two additional bits. Includes two sticks, bracket, and 16 different bits: 2.5mm Hex, 3mm Hex, 4mm Hex, 5mm Hex, T-10, T-15, T-20, T-25, T-30, 1/8" Hex, 5/64" Hex, 3/32" Hex, 5/32" Hex, 3/16" Hex, Slotted #5, and Phillips #1.

29843 \$40.00

Mini All-in-One Torque Driver

Tighten scope rings, red dot sights, mounting plates, etc. Just turn the drive handle until the hash mark lines up with the torque value you need (from 6 - 25 inch-lbs).

29837 \$55.00

All-in-One Torque Driver

Tighten scope rings, mounts, action screws, etc. Just turn the drive handle until the hash mark lines up with the torque value you need (from 15 - 65 inch-lbs).

29836 \$60.00

Scope Bubble Level Set

Level your optics with machined aluminum levels, featuring precise UK-sourced bubble vials. Kit includes: Magnetic level, NATO/Pic rail level/anti-cant device, and Protective foam carrier with pouch.

29839 \$50.00

Scope Jack

A new way to level your optic, the Scope Jack works with any 1/4 inch driver to quickly and easily level your scope to your NATO/Pic rail. Just mount the Scope Jack to the rail under your scope and turn the drive handle until the lifting arm engages with the flat section under your turrets. Once the scope is level, maintain pressure while tightening your ring screws to keep optic level throughout the process.

29838 \$44.00

Bolt Carrier Group Scraper

Custom bit that is designed to clean carbon off the various surfaces of the Bolt Carrier Group. Works with any standard magnetic 1/4" driver. Black Isonite finish for increased corrosion resistance and strength.

AR-15 (Top) 29840 \$10.00
AR-10 29841 \$10.00

Glock Tool Kit

Glock tool kit including two custom bits designed to aid in the assembly and disassembly of Glock Handguns / Front Sights. Includes: *Glock Front Sight Tool*, a 3/16" Hex Thin Wall Nut Driver - Integrated magnet holds the screw securely in place. Machined from Solid Steel Bar Stock. Works with any standard 1/4" bit driver. 3/32" Metal Pin Punch - Punch is sized to ensure easy removal of all Glock pins by hand. Machined from Solid Steel Bar Stock.

29842 \$16.00

Remington Bolt Opener

Access your Remington 700 firing pin quickly and easily in the field with our compact custom bit. Levers the firing pin head with a "bottle opener" action. Molded synthetic polymer bushing protects bolt plug from damage.

The Double Duty TDU® belt is metal-detector friendly and offers two color options. Both the Trainer and Operator belts feature 6,000-pound-test buckles and heavy, reinforced stitching, therefore can be quickly converted into secure tie downs, secondary carry straps or emergency harnesses. All 5.11 tactical belts are made of strong nylon webbing and provide a stable support for carrying firearms and accessories. *According to 5.11 Tactical, belt sizes run small, so they recommend you order one size up for the best fit.*

BLADE-TECH™

The Blade-Tech Ultimate Carry Belt by Nexbelt is specifically designed for those who carry a firearm daily for personal defense. The PreciseFit ratchet system allows you to quickly tighten or loosen the belt in 1/4" increments up to 6" for the perfect fit – no matter how you carry. Rest assured, this will be the most comfortable and fastest adjusting belt you will ever own. The Ultimate Carry Belt has a water-resistant backing that helps prevent moisture from penetrating the outer surface and allows for extra strength and durability. **One size – adjusts to fit all.**

Comtech's STINGER

THE STINGER: Comtech's own personal defense device. Designed to act as a "force multiplier," it's like having the punching power of a karate master – instantly! There's really nothing like it for easy carry and access. It passes un-noticed by 90 percent of people who see it. Yup, just another "keychain device" to most, and yet it works so well when needed. You deserve a Stinger!

"Plan B"

Very-Bad-Day Planner Holster

Dillon's "Plan B" Very-Bad-Day Planner Holster[™] holds a handgun and a spare magazine or pepper spray, yet it fits in with business clothing and won't draw undue attention. It looks like a typical day planner, but inside there's a holster that's adaptable for either right- or left-hand draw. It fits most .380, 9mm, .40 and .45 caliber autos, including: Beretta, Colt, GLOCK, HK, Kahr, Kel-Tec, Ruger, Taurus, SIG, and Smith & Wesson. Will also hold small-frame revolvers with two- to four-inch barrels.

Real Avid Master Sight Pusher™

The Master Sight Pusher is a professional-grade tool that makes quick work of changing pistol sights while protecting both gun slides and the sights themselves. Heavy-duty, built to last and smartly designed to work on most any modern pistol sights. The oversized, ergonomic Easy Torque™ Handle partners with extra-fine drive threads to provide maximum torque with minimal effort when removing or installing sights. The Universal Press Block features multiple contact surfaces for almost any size and style of press-fit dovetail slots and sight profiles. Adjustable non-marring contact surfaces securely hold both 1911 and flat-bottom pistol slide styles.

Meet Tetiana Gaidar!

By Kimmie Dillon

This month's **Blue Press** cover model is professional shooter Tetiana Gaidar. The Ukraine-born beauty started her life as a professional dancer where her hard work and dedication would lead her to appear on "So You Think You Can Dance." Eventually Tetiana's dreams became even bigger than the stage. Unable to own or shoot guns in her country, Tetiana would pack her bags and head to the U.S. to pursue her aspirations as a weapons specialist and actor.

KD: Tetiana, you have such a unique set of talents: professional shooter, actor, dancer, gymnast and model. These skills are landing you some Hollywood roles! Tell us about the current projects that you are working on.

TG: I'll be featured on "Bosch: Legacy" coming out this March. I am the main assassin character for the three season-finale episodes. My character is hired by William Devane, to kill Titus Welliver (Harry Bosch). I have scenes with John Savage from "The Deer Hunter" and Michael Cudlitz from "The Walking Dead." They used all of my abilities to perform my own stunts and my special exotic-weapons tactical skills on the show. I have a sequence in an upcoming Jamie Foxx Netflix feature "Day Shift." Also, I was in the National Samsung Commercial that appeared during the Summer Olympics and the season premiere of "The Walking Dead" which still runs constantly on TV. And I just got back to LA from shooting for one of the lead characters for the game "Call of Duty."

KD: If you could play any character in a movie, what or who would your character be?

TG: Well, I definitely would love to play a female version of John Wick and a female version of the Joker. The Selene character from "Underworld" is cool, also in the first two "Resident Evil" films, I could visualize myself playing that part, but with much better weapons-handling skills LOL.

KD: When it comes to firearm scenes, directors must

appreciate having your shooting skills. Actors trained in firearms must bring a new level of safety to a movie set, correct?

TG: It's funny you ask that question. I was on set of "Bosch: Legacy" shooting scenes with guns, when the tragic Alec Baldwin incident happened. Everyone in Hollywood was panicking over the weapons scenes, but not on my set! Because I have such excellent training from Taran, I was able to assure everyone the gun was

loaded with blanks. It gave great relief to the director, actors and everyone that the firearms were not pointed directly at anyone on set.

KD: Growing up, did you have an interest in shooting?

TG: I grew up in Kyiv, Ukraine, so I wasn't exposed to anything with guns. The first time I saw guns was on the show "X-Files" where I fell in love with David Duchovny and told my mom, "I am going to live in America and be an FBI agent." My country didn't have guns until recently when we had to defend our homes and families from an unjustified invasion.

KD: What made you initially attracted to shooting?

TG: What got me really excited about weapons in action was when I saw "John Wick" with my family back home and got inspired to move to LA to pursue acting. I saw a video of Keanu training with Taran for a film and set up a goal for myself to meet Taran and train for my action films with him. It took me three years every day working hard to achieve my dream. I just won a cup and became a champion at Southwest Pistol

League Limited 10.

KD: Take us behind the scenes at Taran Tactical Innovations (TTI) where you are a shooting instructor. What's it like giving weapons instruction to celebrities?

TG: It's sometimes kind of a surreal experience when you're standing there training someone like Harrison Ford, or Kevin Hart when in the same week you might've been watching "Patriot Games" or "True Story." One of my favorite days at the range was with

my good friend Jon Bernthal, Aaron Taylor-Johnson and Olivia Munn. Another fun time of training was with UFC legends Bas Rutten, Chuck Liddell, Gina Carano, Royce Gracie and Luke Rockhold. Then we had like a director's day and had Antoine Fuqua ("The Equalizer"), Kurt Wimmer ("Equilibrium"), J.J. Perry ("Dayshift"), and Michael Bay ("Transformers"). But getting to work with Keanu on "John Wick 4" is still going to be my favorite time ever because the first John Wick movie inspired me so much that my whole life changed.

KD: Taran Butler is one of the most accomplished shooters out there. What advice does he share with you for training clients at his range?

TG: First, safety is emphasized throughout the class, but it's about the details of the draw, the reloads, the transitions from different styles of weapons, basically showing them all the tips that he's learned over his entire life. But what I like about Taran and working with him is that he is open minded. I am hungry for knowledge and getting more skilled and cross pollinating with other people. We just got back from W.O.F.T. (West Orlando Firearms Training) aka "Tactical Disneyland" near Orlando and added more stuff to our repertoire, like coffee-shop scenarios, carjacking scenarios, and low-light attack scenarios with Simunitions. It's a must-visit location for anyone who is serious about self-protection. We also get this kind of training down the street in Moorpark at Covered Six, another wonderful location with an incredible facility where Taran and I love to train.

KD: I'm sure there are some ladies reading this article who are interested in competitive shooting. How would you encourage them?

TG: First, watch videos of the best shooters out there. All the grandmasters: Jessie Harrison, J.J. Recaza and Taran. Look at their footwork. Start simple with a custom Glock 34 and a 9mm PCC rifle. Of course, I'm gonna recommend getting these from TTI because you can't beat that. Look up USPSA competitions in your area. The people are always very accommodating and nice. They'll tell you where to get what you need, where to get ammo, help you understand the course, and show you the walk-through. You'll make a lot of new friends and you'll learn to be incredibly proficient with firearms.

KD: Competitive shooting takes strength and endurance. What is your daily fitness routine to stay in top shape?

TG: The majority of my shape secret is diet. It is the key to looking – and most important, feeling – good inside and out. I always find at least 15 to 30 minutes to stretch and strength train. Cardio on an empty stomach in the morning after I'm done with my green juice and matcha latte. I do intermittent fasting, light lunches and salad with protein for dinner. Most of my diet is super clean: Pescatarian, organic, from farms, no sugar, no processed

or fast food, no alcohol or smoking or partying. I usually go to bed early to have 8 hours of sleep. I have my cheat days and I do eat meat sometimes to not let my body forget how to digest it. But I do try not to eat dairy at all, and this helps me to look and feel better.

KD: Incredible. You really set the bar high for physical training!

*Note to our valuable **Blue Press** readers: We have been planning to feature Tetiana on our **Blue Press** cover for a while now. When we photographed her on our range in Arizona, the world was different. Much different. Recently things have taken a turn in our world. Tetiana and her family are from Ukraine.*

KD: Shifting focus onto a more-serious note. Tetiana, please tell us what you and your family are going through.

TG: Me and my entire family are going through hell right now. Our lives are turned upside down, no one has slept or eaten since the first day of war. I'm still trying to rescue half of my family, my friends and their families, and all the people who are reaching out to me for help. When Russia suddenly started bombing Kyiv my dad said he couldn't describe what he felt when he was closing our apartment knowing that it will get bombed and everything will be destroyed – even our photo album from childhood. They had to grab only a few little bags with medications and food, the animals and try to escape which wasn't easy because my family didn't own a car. My grandmother died and a couple of actor friends died trying to help kids get across the border – shot by Russians. It took about five days for my parents to get to the border. It was the scariest and most heartbreaking thing I've been through.

KD: You are actively trying to help the people in Ukraine. Tell our **Blue Press** readers how they can assist your efforts?

TG: Everybody can help, even if it's a \$25 donation or simply speaking up on Instagram with a post or story to spread awareness of the tragic unjustified attack on freedom. Anything you can do will help save innocent people's lives like my family and friends. I'm working on creating a nonprofit organization, but it takes some time. Meanwhile, I'm taking donations on my Venmo account and I'm sending them to my family, friends, and the right people in organizations I personally know and trust. I make sure that all the donations are going to kids, mothers and everybody in need to keep them safe and to give them a roof over their head. I post all my actions with money and results where they go and how they help in my stories.

To our **Blue Press** readers, donations are being collected by Tetiana through:

Taran Butler: Hollywood's Go-To Gun Guru

By Kimmie Dillon

We've all done it. We settle in to watch a good action flick: popcorn in one hand and drink in the other. And just when we are really getting caught up in the plot, Hollywood gets the gun scenes all wrong. For those of us in the industry, it's entertaining and annoying at the same time. Filmmakers simply want the scene to be captivating. After all, jumping off a moving vehicle while firing automatic rifles in each hand looks pretty heroic! But time and time again, we sit and watch the never-ending magazine capacity. Reloading is usually only done when it adds to the drama as you seldom see spare magazines. And many cringe at the absence of trigger discipline. Somehow it seems that "finger-on-the-trigger" is portrayed as more cinematic in the eyes of Hollywood.

Thanks to Taran Butler, the quality of firearms handling in movies is getting a "Take Two." His

mission? One-by-one he is getting A-listers in Tinseltown up to snuff. Known as Hollywood's gun guru, Taran is a friend of ours here at Dillon Precision. As the owner of Taran Tactical Innovations, Taran shares his talents by providing advanced weapon training to the Hollywood elite, military and police. The Simi Valley Grandmaster is a 23-time Southwest Pistol League champion along with a list of major match wins too long to print. Have you seen him clear a plate rack – shooting from the hip – in less than two seconds? Taran is a master with any firearm and is one of the best in the world.

KD: Taran, how did you start offering specialized firearms training to stars?

TB: I love films and I had the opportunity to start working on movies as far back as "Avatar." I like making a difference on a good movie and also building friendships with many of these actors.

KD: What do you think is the key to a realistic gun scene in a movie?

TB: Having actors that actually know how to handle guns, a director who listens, and doesn't want to make everything insanely over-the-top and unrealistic.

KD: What are some of the movies that you have provided training for?

TB: "John Wick" two, three, four; "The Punisher" franchise; "Black Panther"; "Without Remorse"; "Suicide Squad"; "The Old Guard"; "Tenet"; "Gemini Man"; "Nobody"; "Kate"; "Avatar"; "SWAT"; "Hawaii Five-0"; "Stumptown"; "13 Hours"; "The Hunt"; "Cowboy Bebop"; "For Those Who Wish Me Dead"; "Hunters"; "Day Shift"; "The Continental"; "Titus," "Titus Legacy"; "Boss Level"; the new "Indiana Jones," and a whole bunch of others I can't remember at the moment.

KD: What makes Wick's handling of firearms look so effortless?

TB: Because Keanu put in the work. And the Director, Chad Stahelski, wanted to go levels beyond any other action film on the variety of weapons training and way more time and work involved than any other film.

KD: Explain to our *Blue Press* readers about the style of shooting that you teach for action films.

TB: The style of shooting that I train the actors is USPSA and 3-Gun based action shooting which is basically the fastest, most accurate style of handling weapons. Nobody on the planet is better or faster than a top three-gun competitor. I was lucky enough to win the Triple Crown. I'm still the only one that's ever done it, being the best in the world at three separate divisions of multi-gun shooting. The Director of "John Wick" saw my style and added it to the franchise for Chapter Two and we kept it going throughout the entire series till the end. Now, I've been lucky enough to work with the spinoffs that will be coming out next year.

KD: Generally, would you say actors are easy to work with?

TB: Yes, most of the actors I work with are easy to train, because they're all perfectionists. They want to get it right. They've mostly worked with choreography on fighting.

This is kind of an extension of that with repetition and I make them focus on the details.

KD: What's some of the worst gun handling you've seen in a movie or on TV?

TB: Rick Grimes of "The Walking Dead" always having his 6-inch Python's muzzle dripping down at everyone's feet and yet is somehow able to hit every zombie in the head; Michael Madsen in "Species," unbelievably lame; "American Assassin," awful grip and silly weapons handling; Alec Baldwin in the remake of "The Getaway"; and probably the worst in years would be "The Dark Tower."

KD: The death on the movie set "Rust" continues to spark movie-gun safety conversations. What are your thoughts on how this tragedy could have been prevented?

TB: "Rust" was a very low-budget, horribly produced mess with people working outside. Alec wanted it to be a woke "all women on board" production, so he hired an inexperienced girl who had a habit of bringing live ammo to the set so they could shoot at lunchtime or after hours. Supposedly, they were shooting in the early morning with live ammo and left a live round in the cylinder. Then you've got a reckless A.D. (assistant director) David Hall – who was actually on the set of "The Crow" where Brandon Lee was killed – grab the gun and give it to Alec. Alec lied about how the gun operates and fired without his finger on the trigger. One of the other options is the people

they got the blanks and dummy rounds from; it's possible they loaded live ammo and blanks and had them in boxes together. The truth is coming out. People will see what happened, but to me these are the two most likely reasons why this happened.

KD: Describe your dream movie that you would like to train actors for?

TB: I kind of just finished my dream movie, "John Wick 4" in France. It's hard to get much better than that.

Thanks, Taran for your time. We'll see you out on the range!

Nighthawk Custom Drop-In 1911 Trigger System

When looking to upgrade the performance of a 1911 pistol, a common improvement sought by shooters is a high-quality trigger job, with a crisp, clean break. Until now, a high-quality trigger job has never been in the realm of a "drop-in" upgrade. Nighthawk Custom has changed that with the introduction of its Drop-In Trigger System (DTS) for 1911 pistols.

An all-in-one unit, the DTS replaces your existing hammer, hammer strut, sear, disconnector, and sear spring. Your existing sear pin and hammer pin will be retained for use with the DTS, but no other parts are necessary for installation. With a steel housing securing the unit, the DTS features all Fully Machined™, stainless steel internal components. The traditional three-pronged sear spring is no longer necessary as the springs for the disconnector and sear are built into the unit. A single-leg grip safety spring is included with the DTS to replace the existing sear spring.

The DTS is designed for use in most 1911 models, and installation is simple enough that minimal gunsmithing skills are necessary.

Connie Hermer fires her Colt CCO
.45 around high cover at ASI's annual
1911 Championship match.

ASI's Annual Single Stack 1911 Championship

By Duane Thomas

The Action Shooting International (ASI) annual Single Stack 1911 Championship is one of my favorite – and most-anticipated – matches. This year, I dusted off my treasured old Wilson 30th Anniversary Model 1911 .45 and sallied forth to once again do battle.

Between last year and this, the term “Single Stack” was added to the match title, instead of simply “1911.” The reason for that is, last year, quite a few people said to the match director, “Can I shoot my [fill-in-the-blank doublestack 1911], does it have to be a singlestack?” This year, the answer was clear: “Yes, it has to be a singlestack.”

(NOTE: Some people spell “singlestack” as one word, some people spell it as two words. Obviously, I spell it as one word.) Not to say you couldn’t shoot the match with anything else, it’s not like they were going to turn you away at sign-in, but in order to qualify for one of the Single Stack 1911 Championship plaques (finishers 1-10 got them), it had to be a singlestack 1911.

This year, at least on my squad, the changeover from .45 to 9mm among 1911s was almost complete. Also, we saw quite a few slide-mounted red dot optics. On my squad, the only people shooting iron-sighted .45s were myself and my friend J. Dorage – though at least one other person, my friend and fellow **Blue Press** scribe, Connie Hermer, was also supporting the honor of the iron-sighted .45 ACP 1911, on a different squad.

There was a time in my life when I carried a 1911 .45 auto every day for six solid years. In the process I put a bit over 30,000 rounds through it, and actually managed to win a Washington State IDPA Championship in Custom Defensive Pistol (IDPA’s .45 ACP autopistol division) with my carry gun. These days, I carry, and compete with, other guns, for one reason in particular: If you try to speedload a 1911 .45, *i.e.*, reload it before it’s empty, with any ammo left in the magazine at all, frequently the top cartridge in the magazine will have slipped so far forward in the feed lips it will prevent the magazine from falling free. You have to strip it out by hand. This is an irritating waste of time in a match environment.

For instance, one stage at this match consisted of six Pepper Poppers (falling steel plates) at about 11 yards, around two yards between targets, with a reload required somewhere between the first and last shot. And no one on my squad was dropping the six targets with only six shots. I waited my turn, wiggling my toes inside

my little fuzzy bunny slippers, knowing I could do it.

“Shooter ready? Stand by...” Beep! Ping! Ping! Ping! Ping! Ping! Five shots, five hits. At this point I am feeling pretty good about myself. I’ve got this. I KNOW I’ve got this. Reload, one more shot to take out that last Popper, I’m down the road. I hit the magazine release button... and the magazine moves a fraction of an inch and stops.

**“These days,
I carry, and
compete with,
other guns, for
one reason in
particular: If you
try to speedload
a 1911 .45...with
any ammo left
in the magazine
at all, frequently
the top cartridge
in the magazine
will have slipped
so far forward in
the feed lips it
will prevent the
magazine from
falling free. You
have to strip it
out by hand.”**

I strip the mag out, reload. At this point I am rushing, trying to make up for lost time. Always a mistake. I miss the last Pepper Popper, my first shot after the reload, and have to take a second shot. That malfunction, and the missed shot that resulted, cost me somewhere between two to three seconds, I would say.

This happens with every 1911 .45 I own. This is what prevents me taking a 1911 .45 into competition against people armed with guns that don’t do that. In years past, when what I shot was mostly IDPA, it didn’t make a difference, because in IDPA, almost invariably I shot the gun to slidelock. So, the fact the gun frequently fails to drop its mag during a speedload if there’s still ammo in the mag was, back when, a non-issue. These days: It is an issue.

At the finish line, for the second year in a row, ASI’s 1911 Championship match was won by Marcin Pawlina. I came in fourth, down from second last year. And lest anyone think I have been trying to imply in this article I would have beat Marcin had my gun worked perfectly, let me make this very clear: No.

As always, this was a fun match to shoot. You can tell, even while a match is occurring, whether it’s working or

not. Are people happy, and relaxed, and chatting, or does everyone seem stressed-out and pissed-off? At this match, everyone was having a good time, a testament to superior stage designs, and superior match officials. I look forward to doing it again next year. All things considered I still love shooting the 1911 .45.

Real Avid Level-Right™ PRO

el reticle is critical to long-range accuracy. For longer shots a canted reticle will push a bullet's trajectory off of center. It gets worse the more the angle increases. A level scope means that

the reticle will be perfectly aligned with the rifle bore. Balancing small levels on a scope turret and gun receivers has been a commonly accepted practice for years. Not only is this a clumsy process, it's wrong. The turret on most scopes is not perfectly aligned with the gun, so even if your turret is level to the gun, your scope may not be. Level-Right PRO simplifies scope alignment in four easy steps. Accurate and intuitive, this instrument quickly aligns the actual scope reticle to the horizontal gun plane, which is key to the long-range accuracy of your rifle. Level-Right PRO helps you quickly and confidently mount a scope for maximum accuracy.

Lyman Mechanical Trigger Pull Gauge

Lyman's mechanical trigger pull gauge is a simple, accurate and cost-effective way to measure the weight of your firearm's trigger pull. Made of tough machined aluminum and steel components, the gauge will stand up to years of use. The gauge features a rolling trigger shoe, "T" handle, a sliding indicator that holds your highest weight and a zero-adjustment wheel.

- Reads from 0 to 12 pounds
- 2-ounce increments
- Highest weight indicator
- Aluminum and steel construction
- "T" handle and hanging loop for storage

Real Avid Gun-Cleaning Chemicals

BORE-MAX™ BORE FOAM

Powerful gun-metal grade foaming solvent is specially formulated to expand and penetrate within the gun bore, rapidly and effectively dissolving performance inhibiting copper and powder fouling.

12oz. can Bore-Max **40215** **\$12.99**

FOUL-OUT™ GUNK BLASTER

Foul-Out Gunk Blaster blows away grease and grime fast. This powerful gun-metal grade solvent quickly strips gun actions of burnt powder, oil and grease, eliminating malfunctions of moving parts due to fouling and build up. Quickly cleans chambers, actions, trigger groups, bolt groups, slides, choke tube threading, semi-auto gas ports, extractors, ejectors and other hard to reach areas.

12oz. can Foul-Out **40216** **\$12.99**

GUN-MAX™ GUN OIL

Gun-Max's advanced gun-metal grade formula sets a new standard for protecting, lubricating and cleaning modern guns. Powerful inhibitors displace moisture delivering extended corrosion protection. Advanced anti-friction additives bond to metal surfaces for longer lasting lubrication of moving metal parts. Maximizes performance of semi-auto guns with high cycle rates. Formulated to excel in sub-zero temperatures and harsh operating conditions.

Apex Tactical Specialties Action Enhancement Trigger for Springfield Armory Hellcat

The Action Enhancement Trigger for the Hellcat pistols is the easiest, quickest upgrade you can do to the trigger system that significantly improves the feel of the trigger pull, without reducing factory safety values. When properly installed, this drop-in trigger will:

- Reduce trigger pull weight to 5.0 to 5.5 lbs after break-in
- Smooth uptake and reset
- Reduce trigger overall travel and reset distance
- Deliver a crisp trigger break
- Directly replaces factory components without additional fitting
- Maintains factory safety values

The Master Bench Block™ is the most comprehensive AR15 bench block ever! It allows you to tap 13 critical pins from 5 different components. The block is wrapped in an over-molding that grips to your bench to prevent slippage.

29033 **\$34.99**

This advanced kit includes every standard and roll pin punch needed to build or work on an AR15.

29032 **\$39.99**

The Chamber Boss –AR15™ All-In-One AR15 Chamber Cleaning Kit. Every tool you need to easily eliminate baked-on carbon from the AR15 chamber.

21778 **\$29.99**

Installing a pivot pin is a small step that can quickly become a giant pain in the neck. Meet the AR15 Pivot Pin Tool – the one tool guaranteed to take the nail biting, pin-launching task of installing a pivot pin and turn it into something you might actually look forward to. Align the guide, insert the spring and detent pin, slide the pivot pin into place. Click. Snap. Done.

29034 **\$9.99**

Carbon Boss™ – AR15. This is the most comprehensive carbon removal multi-tool ever built. Extremely versatile, it has 12 precision surfaces to clean the most critical parts of your bolt, bolt carrier, cam pin, and firing pin. It's the enemy of your AR15's worst enemy.

29039 **\$29.99**

The unique Accu-Grip™ Picks and Brushes get the job done, feel good in your hand, and won't scratch your firearm. Eight profiles dig gunk out of the places that even the sun don't shine. They're tough on the crud but tender on the metal. A better designed, better built detailing kit that just might make your dentist jealous.

29036 **\$9.99**

The AR15 Brush Combo™ contains the critical components you need to keep your AR15 chamber and bore carbon free. It contains a star chamber brush and star chamber mop for cleaning inside the hard to reach star chamber. Star chamber pads help collect leftover carbon while applying the perfect amount of oil or solvent. The .223/.56mm bore brush scrubs baked on carbon from lands and grooves.

29037 **\$9.99**

There's no easy way to scrape carbon out of the star chamber of an AR15 unless you're a surgeon. That's why you use a star chamber brush to loosen the carbon then remove it with these star chamber cleaning pads. Done deal. Now get back to shooting. 20 wool chamber pads per package.

29038 **\$12.99**

Slip 2000 Products

725 Gun Cleaner Degreaser

should truly be called Super Degreaser. This water-based cleaner will cut through the toughest cosmoline, carbon, grease and grime! Its super strength allows it to degum and degunk the dirtiest of gun parts when sprayed on or used in parts washers or solvent tanks! **NOTE:** To help prevent rusting, users must apply a gun lubricant immediately after cleaning to disperse any moisture in parts.

16 Oz. 19237 \$24.00

Slip 2000 Carbon Killer

provides you with a safe, effective way to clean carbon, lead and plastic wad fouling. Unlike other gun cleaners, this product is non-flammable, non-hazardous and biodegradable. Designed for soaking metal parts with baked on carbon, Carbon Killer dissolves carbon and lead on contact. **NOTE:** Carbon Killer is for cleaning internal metal gun parts with baked on carbon by soaking them. It is an aggressive cleaner and should not be used to clean the outside of your gun. It can damage and even remove some finishes.

15 Oz. 19234 \$24.00

Slip 2000's **Extreme Cleaning System** contains 2 Oz. bottles of: Carbon Killer Bore Cleaner, 725 Gun Cleaner Degreaser, and EWL Extreme Weapons Lubricant.

11652 \$28.00

Slip 2000's **AR Cleaning System** contains a 7 Oz. bottle of Carbon Killer Bore Cleaner, a 15cc syringe of Extreme Weapons Grease, and a 1 Oz. bottle of EWL Extreme Weapons Lubricant.

11676 \$22.00

Slip 2000 **Extreme Weapons Lubricant (EWL)** was designed for use on chain guns and machine guns like the MP5 and the 249SAW. It contains a proprietary Anti-wear agent that reduces friction and wear by 90-95 percent. It is an excellent CLP and is able to clean, lubricate and protect.

4 Oz. 11644 \$21.00

Slip 2000 **EWL30** has the same properties as EWL, except it is a lot thicker. It contains a proprietary thickening agent that makes this lubricant consistency like a 30-weight motor oil. It was designed for those who want or need a lubricant that will not migrate at all and don't want to use a thick grease.

4 Oz. 11645 \$24.00

Slip 2000 **Copper Cutter** is specially formulated to remove copper, lead, powder residue and plastic wad fouling from bore surfaces with little scrubbing! **NOTE:** It is a water based, ammonia enhanced product and will remove all lubrication or oil protection, so always re-lube all parts cleaned.

4 Oz. 11646 \$14.00

Each Slip 2000 **Gun Wipe** packet contains one 5" x 8" wipe treated with Slip 2000 Synthetic Gun Lube. Perfect for wiping your guns down after a day on the range or while out on a hunt. Apply to all metal surfaces. Great for light carbon cleaning. Safe for all firearm stocks and grips.

20 Pack 11674 \$17.00

TW-25B is the choice of leading firearms manufacturers, armorers, pro shooters and gun enthusiasts, and is recognized as the world's best all-purpose weapons lubricant/protectant. It is now widely specified by the U.S. military for their most critical performance weapons systems. Environmentally safe, non-carcinogenic, non-ozone-depleting.

Real Avid MASTER GUN VISE™

MULTI-AXIS BENCH-MOUNT VISE WITH TORQ-LOK™

One vise to rule them all. The first real bench vise made exclusively for guns and gun tools. Whether you're building and customizing, repairing and cleaning or mounting scopes and accessories, this vise improves every part of the GUN DIY® experience. Quickly reposition your gun to any orientation without ever removing it from the vise. Insert the Torq-Lok pin for applying heavy force. Use the removable and reversible Gun-Fit jaw sleeves (*not pictured*) for a specific gun grip or turn the leveling knob for simple scope mounting and leveling. Build. Customize. Repair. Mount. Clean. All hail the King....

Real Avid AR15 Bolt Catch Pin Starter & Pin Punch Set

Two punches, one simple solution to the difficult-to-access bolt catch retaining pin. The orientation of the pin, close proximity to the lower receiver, distance required to safely punch a pin, and the difficulty in getting the pin started makes it a real pain with standard punches. Our simple solution is specially designed to fit flush against the receiver without damaging it, and is long enough to reach the pin. It features a roll pin punch for removing pins and a magnetized roll pin starter punch that eliminates the need for a third hand. Smart, simple, frustration free.

Real Avid LUG-LOK® Upper Vise Block

Real Avid designed an upper block that leverages the strongest part of the gun – the barrel lugs inside the star chamber. The Lug-Lok is precision machined and precisely fits into all Mil-Spec uppers. It mates perfectly with the barrel lugs, while allowing you to rotate the upper to be able to work on different sides. The Lug-Lok is the safest, easiest and smartest way to lock down an AR15 or AR10 upper into a bench vise.

Justified Defensive Concepts, LLC Multi-Use Training Target

Shooters who compete in several disciplines can now use one target to practice USPSA, IDPA and ICORE or train with various dot-torture and bullseye arrays. The National Target Company, Inc. is offering the Justified Defensive Concepts, LLC Multi-Use Training Target. Sized 22.5" x 35" on lightweight paper, this target's versatility is almost unparalleled for handgun, pistol-caliber carbine and rifle training or practice. It comes in a package of 50 targets and just might be the **ONLY** target you'll need for your shooting session.

11713 \$19.99

The **Alpha Target** is **Shoot Out Targets'** Patent Pending instant-reaction target system that can be reused again and again to improve your marksmanship. All Shoot Out Targets are made of durable cardboard that has been tested to withstand 1000-plus shots. Unlike clay pigeons that can only be used once, the **Foam Medallions** are durable and able to self heal for longer-lasting use, allowing for up to 40-plus shots per medallion. Each foam medallion is 3" in diameter and 1/2" thick. With the easy-to-see foam medallions you will get an instant kinetic reaction with every hit. Shoot Out Targets are proudly made in the USA, reusable for hours of fun and can be used with all-caliber firearms and airguns. The target stands 43" tall and 22" wide when assembled.

Setting a Powder Measure

By John Kleespies

Setting a reloading machine's powder measure is one of most basic skills involved in the manufacture of ammunition... and sometimes one of its most frustrating skills.

This is because setting the powder measure can sometimes feel like a never-ending process when a load is being developed, and there's a range of different test loads varying by only 1/10th of a grain apiece, until the final recipe is finally settled upon. This can result in major headaches as the reloader struggles to nail each weight for each set of test rounds.

Over the years, I've developed a process for setting my powder measure, which I will outline here to assist newer reloaders, though some experienced reloaders may pick up a helpful tidbit as well.

First, make sure that your workspace is clear of environmental factors that may tamper with your weighing process. This starts with a clean pan and measure, as you don't want contaminants mixing with your powder drops. Secondly, keep your doors and windows closed, and turn off that fan or HVAC unit: electronic scales will jostle with even slight air movement. If possible, limit your illumination sources to natural sunlight or LED lights, as fluorescent lights sometimes emit signals that can confuse a digital scale. Finally, calibrate

the scale after ensuring that it is sitting on a perfectly level surface, and set the tare weight (in other words, zero it) with the empty pan in place.

When I'm adjusting my toolhead, I only work with

one station at a time, and so the only die that concerns me right now is the powder die. The casefeeder is turned off, and if I'm using a machine like my XL 650, I'll work with an empty primer tube, though the slider-style priming systems found on a 550, 750, 1050 or 1100 can remain filled. For brass, I use a single, cleaned case with a dead primer throughout the entire process. As you can see in my photograph, I have the locator buttons removed from the powder station and the station immediately after it. I'll individually insert the case under the powder die for every drop, and once the powder is in the case, I'll immediately remove it at the next station for measurement.

For this article, the load that I'll be working with is a 9mm loaded with 3.8 grains of [pistol] powder. Because I'm starting with a powder measure that is set

up for a different load, I'll begin by weighing the powder drop "as is" to establish my starting point. My starting weight is 4.3 grains, so I need to lower the powder drop weight by half a grain.

Using a 7/16" wrench, I'll make a "gross adjustment"

"I have the locator buttons removed from the powder station and the station immediately after it. I'll individually insert the case under the powder die for every drop, and once the powder is in the case, I'll immediately remove it at the next station for measurement."

on the powder bar by giving it about a half turn, counterclockwise. Now, I'll make one powder drop, return that case worth of powder back into the hopper, and then make another drop. I do this because I want to make sure that the bar has run through a complete cycle after my adjustment so that I know without question that the measurement I'm taking is replicating a "running" powder drop. Whenever I make a powder-bar adjustment, I always adhere to this action of discarding the first drop and measuring the second drop.

Also, after dropping the powder into the pan, I lift the pan and give it a little shake so that the contents are level and settled into the center of the pan. I then make sure that the pan is centered atop the scale. And then I wait about five seconds or so for the scale to settle after the pan is put into place. Any variations of the above – uneven powder in the pan, uncentered pan atop the scale, and/or rushing the scale's report – could result in bad data.

My half-turn crank of the powder bar has given me 3.6 grains. So, I went too far... which isn't surprising in the slightest. Let's just say that if you crank the bar and it does somehow manage to land on precisely the correct weight, then go buy yourself a lotto ticket, cuz it's your lucky day!

Returning to my 7/16" wrench, I'm going to make a small clockwise adjustment on the powder bar. Basically, I'm shifting the wrench from the 12 o'clock position to the 1 o'clock position. Not huge, but not tiny. Now, there's a miniscule possibility that I'll actually hit the correct weight this time, so after I've made my adjustment to the bar, I'm going to back the wrench counterclockwise just a hair to set the threads. This will help to keep the bar from shifting out of position in the future, should I start mass-producing rounds with this bar setting.

One more measurement on the scale, and I'm at 3.7 grains but still not 3.8 grains. So... I repeat the process outlined in the above paragraph.

My next measurement is now at 3.8 grains. Eureka! Time to start cranking out bullseye-worthy rounds, right? Nope. At least not for me.

What I'm going to do now is drop another nine cases into my powder pan for a total of ten powder drops in the same pan. Shake it level. Center the pan in the scale. Wait five... or ten... seconds, and...

I'm at 37.4 grains, which means that my powder drops are actually averaging 3.74 grains rather than the 3.8 grains that the electronic scale originally told me before.

One more adjustment, very slightly clockwise followed by a setting of the threads, and I'll do another ten drops into the pan.

Now I'm at 37.9 grains for an average of 3.79 grains per drop.

Time to quit, right? Nope!

Let's repeat it two more times, just to be sure, and... both of those test runs also give me drops of exactly 37.9 grains.

At this point, I feel pretty good about my powder bar setting for this load. If I really wanted to be particular, I could continue chasing the adjustments down until I've achieved ten drops that are hitting 38.0 grains for an average of exactly 3.8 grains, but in my humble opinion this is accurate enough for a pistol load.

On the other hand, if I were developing a precision rifle load, then I'd keep going... and if you'd like to see me completing this 10-round weighing process for a precision rifle load, you can check out my "Dillon Powder Measure Accuracy" video at <https://www.youtube.com/watch?v=-G4L5RCMapM>. This was a video I made while writing a previous article for **The Blue Press**, and it does a nice

job of showing how precise you can get with your Dillon powder measure.

And, last but not least, now that I've determined that my powder bar is set, I'll cover the adjustment bolt head with a piece of blue painter's tape that states the weight of the drop and the powder type in the hopper. This prevents any passersby from messing with my powder bar (yes, it's happened!) and serves as a reminder as to the measure's setting in case I don't use it for a while and forget what my last load may have been... which could save me a whole lot of trouble if my next reloading session happens to be with this same load all over again!

"At this point, I feel pretty good about my powder bar setting for this load. If I really wanted to be particular, I could continue chasing the adjustments down until I've achieved ten drops that are hitting 38.0 grains for an average of exactly 3.8 grains, but in my humble opinion this is accurate enough for a pistol load. On the other hand, if I were developing a precision rifle load, then I'd keep going..."

Beyond Stupid *Continued from Page 19*

Confronting Bad Guys but Ignoring Accomplices

Gun owners study many answers to, "What should you do after you shoot criminals?" Humorous (or at least ironic) answers include shoot them again, reload (a decent idea by the way), get a shovel, and have a beer. The real answers, which Hollywood would do well to show, aside from calling your lawyer, ensuring evidence is preserved, noting witnesses and calling for backup or 9-1-1, is *scan*. Immediately scan your surroundings for accomplices. Often present, they may be highly ticked off and remain deadly threats while the original threat lies moaning, reaching for a gun or bleeding out.

Fingers on Triggers

It drives gun owners crazy, but is ignored by oblivious actors. Even while climbing walls or under intense stress, fingers finger triggers, encouraging unintentional discharges – which are rarely shown but would be frequent – advancing dangerous ignorance for the viewing public. Lately though, a trigger finger indexed along the frame has become more common. At last, a tiny modicum of inculcated safety. Just ignore "Star Trek," where actors finger their phasers as if this is the approved technique.

Muzzle Control

There isn't any. Absolute lack of awareness, plainly evident on the screen. Watch for it – pointing at your partner or yourself is unfortunately screen-routine.

Talking Softly After Gunfire

This cracks me up. Anyone who has ever fired a gun without ear protection knows guns are so loud they leave you temporarily deafened after firing. To see actors shoot in close proximity, then whisper instructions to each other, it's inane.

Shooting Guns Out of Hands

Getting tight shot groups at a range, where you are not being shot at and can take your time, is a highly practiced skill. The idea of disarming people by shooting their guns away – under dire circumstances where that might be justifiable – is so widespread and unchallenged even our current president thinks it's a good idea, not an impossible dream. He suggested intentional woundings as alternatives for stopping lethal criminal threats (beyond dangerous, illegal and indefensible acts). Look how much damage bad film making is doing to our society.

See more of Alan's work at GunLaws.com.

Dillon Teams Up With TechwearUSA

In response to everyone who has been asking us for Dillon Precision shooting jerseys, we've teamed up with **TechwearUSA** – Your Official Provider of Custom USPSA Gear!

The TechwearUSA AirFlex (\$70) is the ultimate performance layer and their lightest weight jersey. The TechwearUSA Premier Polo (\$95) is made of proprietary Techstatic fabric and is the ultimate competition polo. From its classic cut, added length to make sure it stays tucked in, fold-over collar, zipper front and side panels made from extra breathable mesh, every detail of this garment has been thought through to help you look, feel and perform at your best.

To order TechwearUSA's Dillon Precision men's and women's shooting jerseys, go to techwearusa.com. By the way, the "USA" in TechwearUSA signifies that their apparel is MADE HERE!

HELLCAT[®] PRO

THE PERFECT BALANCE

Combining the performance of a larger handgun with class-leading concealability and capacity, the new Hellcat[®] Pro is a compact pistol chambered in 9mm that offers 15+1 capacity in a smaller footprint than any other gun in its class. Optics ready and equipped with a versatile accessory rail and hammer forged barrel, this exceptional everyday carry pistol delivers the perfect balance.

Scout Scope Mounts

Sorry, the optic pictured here is NOT included with the Scout Scope Mount.

Scout Scope Mounts provide an extremely stable optics base for your SAK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle	25374	\$79.99
Scout Scope Mount for SKS Rifle	25373	78.99

BERRY'S

Like pretty much everything from Berry's Manufacturing, this 9" x 12" x 10" deep stackable utility box is made in America and covered by a lifetime warranty. The box is designed to stack and is great for storing bulky items. If your gun room/garage looks anything like ours, these will help you get organized. So, whether you're looking to store shooting accessories, ammo components, or car parts (we have more than our share of all of the above) these boxes are ideal. The best part is that they're transparent, so when you fill them, you don't have to open the WHOLE stack to find what you're looking for.

Stackable Utility Box 40194 \$20.99

John Marshall on Classic Firearms: The U.S. M1A1 Carbine

"Today, legitimate M1A1 carbines are increasingly rare; I've seen them sell as high as the \$3,000 range."

United States paratroopers have always been a special breed, and during World War II, it became apparent that their equipment needs were very often special as well. Lightness and handiness were the bywords for firearms that were needed for the G.I. Joes who jumped out of perfectly good airplanes in battle. This weapon fulfilled that need.

The standard U.S. infantry individual weapons during the war were the semiautomatic M1 rifle, the 1911 and 1911A1 .45 pistols, the 1928, 1928A1, M1, M1A1 and M3 submachine guns, the BAR (Browning Automatic Rifle) and the semiautomatic M1 carbine. While other weaponry was employed at times, these firearms were the standards. Of course, the paratroopers of the 82nd and 101st airborne divisions relied on them as well. But none of these firearms were ideal for paratroop use.

The main problem for paratroopers was that as soon as they hit the ground, they often had to employ their firearms instantly. The M1 rifle was a superb battle rifle, but it was heavy at 9-1/2 pounds. Its length also made it unwieldy if carried on the person while getting out the door of an airplane. Because of these detriments, these rifles were usually dropped in large metal canisters containing rifles in protective padded canvas "drop bags." For compactness, the rifles were separated from their stocks inside the bags. The same faults were true of the 1928, 1928A1, M1 and M1A1 Thompson submachineguns. While shorter than the rifles, they were undeniably heavy and were in fact cumbersome. These could be slung or attached to the paratrooper, but the weight of these guns was a lot to endure when included with all the other gear that had to be carried on a jump. The M3 "grease gun" was light and handy, but it was not an especially accurate piece, and the range of the .45 cartridges was not extensive. While the .45 pistols were easily carried, they were defensive rather than offensive weapons and had a very

limited practical range. The M1 carbines were light and more maneuverable, but still somewhat awkward to pack directly on the body during a jump. Accordingly, these were also routinely stowed in drop bag canisters and were not instantly available on the ground.

It was suggested by some that a folding stock version of the M1 carbine might be a good solution for the paratroopers. It would be light, compact, packed easily on the person and therefore be quickly available on the ground. Accordingly, in the Spring of 1942, work began on a suitable design. Engineers from Springfield Armory, Winchester and the Inland Manufacturing Division of General Motors were assigned to the project. An Inland engineer came up with a concept that would allow the stock to be folded easily to the left side and allow the carbine to be fired either folded or extended. Two other proposals from different sources were rejected. The final design was finally approved on May 12, 1942, and the carbine equipped with the folding stock would be designated as the M1A1 carbine. Two production runs of these weapons were made at Inland. Each comprised about 70,000 guns. The first run was between December 1942 and October 1943. The second was between May and October of 1944. The first combat use of these weapons was during Operation Husky, the jump into Sicily by the 82nd Airborne Division in July 1943. They were also notably employed during D-Day and Operation Market Garden in Holland.

The new stock would utilize a near-vertical pistol grip for better use with the folding heavy-wire stock but would accommodate the standard M1 barrel and receiver group. The only modification that made the carbine an M1A1 model was the folding stock; all other items on the firearm would be the same as were found on the standard M1 carbine. The receiver markings for the M1A1 and the M1 were the same; no receivers were ever marked as M1A1s.

The small oiler tube that anchored the sling to the rear of the M1 stock would be clipped instead to a leather cheek pad on the folding stock. A slotted metal tab for attaching the rear of the sling was incorporated at the bottom of the pistol grip. The rear of the folding stock used a spring-loaded checkered cast steel buttplate that would fold against the left side of the wood portion of the stock when the stock was in the closed position. The inside of the buttplate bore a cast-in number, usually "B257614" followed by a starburst mark and a 1- or 2-digit number. Today, the presence of these markings enables modern-day collectors to identify a buttplate as one of the originals, as many reproduction M1A1 stocks have been made since the end of WWII. Other hallmarks of an original stock would be the bumps, scratches and bruises that will be almost uniformly present on a stock made nearly 80 years ago. Look at the leather cheek pad. It should show its age also – the leather would have turned darker and be more pliable on an original. The bluing on the metal parts will usually be worn. Also recognize that all original M1A1 carbines were made by Inland. Any other manufacturer's identification marks on the receiver would be improper, although some intermixing was possible during refurbishment.

The early M1A1 carbines originally had flip-flop rear sights, pushbuttons for both the safety and the magazine release, and no bayonet stud. Most of these were refurbished in post-war years with adjustable rear sights, rotary safeties, magazine releases (marked "M") intended for use with both 15- and 30-round magazines, and barrel bands incorporating a bayonet stud. Roughly half of the total of M1A1 carbines made had all or some of the later parts mentioned during manufacture. Whether an M1A1 has early or later parts should not invalidate a gun for collection. Both styles are perfectly legitimate. M1A1 carbines were used in Korea, and as late as the Vietnam war. In the beginning, troopers using the early guns were issued M3 trench knives in leather scabbards which were usually strapped to a leg. As the bayonet-capable guns were available, the M4 bayonet

was issued with an olive drab plastic scabbard. This bayonet was in fact an M3 knife design modified so it could be affixed to a carbine. If you have an early gun, you should also have an M3 knife; if it's equipped for a bayonet, you should have an M4 bayonet.

Although a special canvas leg scabbard or "holster" was first made to accept the M1 carbine for jump purposes, it was seldom used and today it's a collector's item. As the M1A1 became issue, a similar canvas leg scabbard designed specifically for that gun was issued. Many photos of men boarding planes bound for WWII combat show that combination being used. If the leg scabbards were not available, a separate padded jump bag was used.

Specifications for the M1A1 are as follows: Length extended 35.6". Length folded 25.5". Barrel length 18". Weight 6.2 pounds. It should be noted that the National Firearms Act of 1934 specifies that a rifle should measure at least 26" overall. The question is if a folded M1A1 at 25.5" is in violation of the law. It has been determined that this firearm is exempted from that requirement. Fold one with full confidence that you have not violated the law because of half an inch!

Sure, some WWII paratroopers jumped into combat with submachine guns, M1 rifles or BARs during the time the M1A1 carbine was available to them. M1s and BARs were often specified as needed, and I really feel for the GIs who had to rush to open up drop bag canisters under fire and then endure the extra weight over their M1A1 carbine-equipped comrades.

Today, legitimate M1A1 carbines are increasingly rare; I've seen them sell as high as the \$3,000 range. A number of close reproductions

are currently being made, and separate folding stocks are sold as well. A collector must know what to look for when an authentic gun is sought. As in most things, knowledge is power.

M1A1 carbines have the distinction of being specially made for a special bunch of guys who dared to jump from the skies into mortal danger. That makes these firearms very special classics indeed.

Original M1A1 carbine leg scabbard.

Original M1A1 carbine buttplate showing markings on the reverse side.
