ATTENTION DILLON CUSTOMERS: Because of changes to California's Proposition 65 that took effect on August 30, 2018, companies doing business in California are mandated to provide warnings on products that may expose Californians to any one or more of a list of approximately 900 chemicals, including Lead, which are "known to the State of California to cause cancer, birth defects or other reproductive harm." The new regulation states that a warning must be "provided in the catalog in a manner that clearly associates it with the item being purchased." Though we have no reason to believe our products could cause harm when used as intended, we now include the appropriate Proposition 65 warnings on some of our products to meet the California "safe harbor" requirements.

Dillon's Bill of Rights for Reloaders

All of Dillon Precision's customers have certain inalienable rights when they buy a reloading product:

- 1. Right of Quality** – YOU THE CUSTOMER have the right to expect a well-designed product, manufactured with quality materials and workmanship that does what the seller claims it will do.
- 2. Right to Test and Send-Back** – YOU THE CUSTOMER should have the right to test the product on your own reloading bench for at least 30 days, and if it does not live up to your expectations, send it back for a full refund.
- 3. Right of Service** – YOU THE CUSTOMER have the right to free, friendly, expert service and technical advice available through a toll-free phone number. This service should include prompt replacement of broken or bad parts – free of charge.
- 4. Right of Warranty** – YOU THE CUSTOMER have the right to a lifetime warranty on any non-commercial-grade reloading product you purchase. *Unfortunately, we can't offer this warranty on textile products and electrical or electronic components.*
- 5. Right to be Heard** – YOU THE CUSTOMER should have the right to speak to someone of authority anytime you can't get satisfaction through normal channels. If our sales representatives aren't able to help you, our supervisors have a mandate to take customer-satisfaction issues all the way to the owner of the company if necessary.

Editor's Note: The Bill of Rights for Reloaders is Dillon Precision Products' customer-satisfaction policy. It remains very much unchanged from the day the company was founded. The disclaimer about textile products and electrical or electronic components reflects the reality of how those products are produced in today's world. Ultimately, our founder recognized that satisfied customers are our best advertising, and the only thing that differentiated his wcompany from all the others at the time was the warranty and customer service he offered.

We constantly strive to live up to his standards.
Please let us know if we're not succeeding.

All the electrical and/or electronic components of Dillon equipment and all Dillon textiles are covered by a one-year warranty from date of purchase. Any modifications performed to Dillon machines, or the addition of any unapproved equipment, including automated or mechanical add-ons from other manufacturers, is expressly not recommended and will void the Dillon warranty.

CP 2000[^]

Dillon's DEDICATED Case-Processing Machine!

- Made in the USA
- Eccentric Roller Bearing Drive System
- Smoother Operation, Less Effort
- Higher Throughput, Lower Cost Per Case
- Heavier Frame for Greater Rigidity
- Seven Threaded Stations for More Flexibility
- Upgraded Primer Pocket Swager
- Primer Pocket Swage Available in Two Stations
- User-Replaceable Swage Rod Tip
- Reinforced Toolhead Bolt & Washer
- Improved Shellplate Indexing System
- Processing Speed up to 2000 Cases Per Hour

Designed to complement our RL 1100 and Super 1050, the CP 2000 offers higher speed, greater versatility and added case processing capability...all at a much lower cost than dedicating a RELOADING machine to prep brass! If you're loading mass quantities of ammo, the CP 2000 will make your task MUCH easier.

Rapid Trim 1500 Case Trimmer[^]

Dillon's
RT 1500
shown
installed
on an
XL 650.

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (Vacuum cleaner and hose not included.) The RT 1500 is equipped with a quick-disconnect

power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer **62164** is **\$425.00**. (Available only in 110 volt 60 hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, **13141**, are **\$25.00** each. Upper lock rings, **13559**, are **\$9.00** each.

MILITARY BRASS?

**Eliminate the "Grunt Work" with
Dillon's Super Swage 600**

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

6.8 SPC Back-Up Rod	62124	\$27.00
9mm Adapter	62168	20.00

Case Preparation Equipment

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is one of the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour. Not only is our capacity greater than most, but our motor is also larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine! The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media. We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners. The solution was an injection molded reversible part. Simple, and it works great. Our device is large, 10" x 14",

Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

CM-500 Case/Media Separator ^	21045	\$80.00

and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench. It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon created the CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit. Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Dillon's **D.C.L.** non-aerosol case lube is easy to use. Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

**CAN YOU
PROTECT
YOURSELF**

WITH A .22?

**By Maureen P. Sangiorgio,
NRA-Certified Firearm Instructor/Range Safety Officer**

I remember the first time my Dad put a gun in my hand. I was in the fifth grade, so I must have been about ten years old. It was a Hi-Standard .22-caliber revolver, nine-shot. We were up my Dad's hunting cabin in upstate Pennsylvania, shooting tin cans out back. For the first few times, he cupped his hands around mine, to make sure I could safely handle it. I really enjoyed shooting that gun! Still do, to this day.

Historically, firearms chambered in .22 caliber were primarily used for varmint hunting, plinking, and to train children on their first gun. Fast forward to today and take a look at the plethora of .22 Long Rifle and .22 Magnum pistols available, as well as more effective .22 Long Rifle self-defense cartridges on the market. Do these advances in platforms and ammunition technology really translate to effective, .22 caliber self-defense? Read on to find out what the experts have to say....

Pros & Cons of a .22 Magnum Pistol

According to Beth Alcazar, United States Concealed Carry Association (USCCA)

Editor-At-Large, there is a lot of discussion and divergence of opinions on the topic within the firearms community. "Some would claim that a .22 LR is better than nothing in a self-defense situation, yet others would argue

absolutely no way is a .22 enough," says Beth. "I fall somewhere in between on that spectrum. While I believe a .22 round could certainly stop a threat, whether from a physical or a psychological aspect, or both, it's just not as large or as powerful as its centerfire counterparts. The .22 is just more mild-mannered than it is hard-hitting!"

It's important to note that the .22 cartridge, which is more than 150 years old, was not designed for personal protection. "So not only is there increased potential for a miss under extreme stress in a dynamic critical incident, but using a .22 might also increase the possibility that the projectile may not penetrate through the threat's clothing," notes Beth. "It can also increase the chances that a well-placed round will not even be felt by the attacker, who is also experiencing an adrenaline rush. For those reasons and more, a .22 might be an option, but it's not a solution, unless it's to be used for weak, frail,

injured, or otherwise incapacitated hands. Think of the .22 as a start point but not an end point. Use it for training and for confidence building, but strive to use a larger caliber for your defensive pistol."

According to recent ballistic tests, the .22 Magnum does offer more muzzle velocity than the .22, so you can shoot at longer ranges. It is comparable to a .38 Special, in terms of velocity and recoil. Specifically, the ammo often offers velocities at about 1,100 feet per second, which is enough muzzle energy to stop a threat.

So what do the gun manufacturers have to say? I spoke with Chad Enos, Shooting Team Co-Founder at KelTec, maker of the PMR30 handgun (*pictured at left*), a .22 Magnum pistol that comes with two 30-round magazines.

"As a rule of thumb, I typically don't recommend rimfire platforms for personal defense due to the historically poor track record of rimmed cartridges in terms of reliability," says Enos. "That said, the technology and quality in both rimmed ammunition and modern magazine designs has certainly made shooters much more confident carrying .22 LR or .22 WMR in a semi-automatic firearm."

It's been said that carrying a .22 caliber pistol is cost effective and easier to use in a self-defense scenario.

"Although I would never volunteer to stand in front of a .22 caliber bullet traveling at 1,200 feet per second, I certainly

wouldn't rely on

its power or lack thereof by comparison to stop a deadly threat when split seconds matter," says Enos. "The last thing I'll be worried about in a self-defense scenario is ammo cost or recoil."

The Importance of Training

Enos recommends that if you are considering carrying a .22 for self-defense, training is key to success. "For those that are recoil shy I say this, train more at the live fire range. Everyone I've ever met starts out recoil shy, including the most professional shooters. When your life or the lives of loved ones is on the line, the last thing you want to regret is a lack of serious training."

There's no doubt about it – a confident gun handler is a proficient and safe shooter. "Do not let recoil dictate what you carry," advises Enos. "The same goes for weight or comfort. If you're confident and proficient with a comfortable micro 9mm, then by all means, carry that platform if your way of life allows that luxury. Always bear in mind the surroundings of your daily life

Manufacturers

Here are some popular handgun models chambered in .22 Magnum:

- Charter Arms Pathfinder
- FN 502
- KelTec PMR30
- North American Arms Wasp & Ranger II
- Rock Island Armory XT & M1911 A1 XT
- Ruger LCR (pictured above)
- Smith & Wesson 351 PD Airlite J-Frame
- Standard Manufacturing S333 Thunderstruck
- Taurus USA Model 942 & 992 Tracker

before you decide to leave the house underpowered and potentially outgunned. If you deal with a physical ailment that does not allow you to carry a larger caliber than something chambered for a .22 rimfire cartridge, then by all means train with and carry a .22 platform. Having something and not needing it is better than needing something and not having it."

A Word On Ammo...

The .22 Magnum cartridge was first introduced by Winchester in 1959 as an upgrade to their older .22 Winchester Rimfire cartridge. It's slightly longer than the .22 LR, and the case wall is thicker. Granted, it is less expensive than most center-fire ammo, but you'll find it is generally more expensive than .22 LR ammunition.

I have shot the .22 Magnum loads, and while the recoil was mild, they were certainly louder and proved to have a brighter muzzle flash than one would expect with a .22 cartridge. In addition, according to recent test results, when loaded with 40 grain or heavier bullets, .22 Magnum revolvers can meet FBI standards for effective penetration depths.

"If you're one of those people that can only carry or chooses to carry a .22 LR or .22 WMR firearm for personal defense, always make sure it's clean, properly lubed, properly loaded and in reliable working order," says Enos. Choosing the right ammunition is imperative. "Rimmed cartridges were initially designed for bolt-action rifles," explains Enos. "Modern manufacturers have designed semi-auto firearms around the rimmed cartridge options out there. Make sure the ammunition you choose for your .22 carry pistol is of excellent quality and works in your particular carry gun with little to no malfunctions. .22 ammunition is dirty by nature, so making sure your .22 carry gun is always clean and lubed before it goes in the holster can be a matter of life & death. Those platforms are much less forgiving than their centerfire counterparts." My faves? I like Hornaday Critical Defense and Speer-Gold hollow points.

The Final Word

In a self-defense situation, can using a .22 Magnum pistol loaded with .22 Magnum self-defense ammo get the job done? Absolutely. However, after speaking to the experts, and reading several articles online, it's not the number-one best choice. Granted, it is better than nothing, but I suggest you start out with the .22 Magnum, then work your way up the line, slowly increasing in caliber. If you have physical limitations, try grip-strengthening exercises to build up forearm/grip strength such as squeezing a tennis ball, and doing reverse curls.

Dillon Automation's DA 3000

For Dillon Precision's CP 2000 and RL 1100

Introducing the new Dillon Autodrive 3000!

- Fully automates the Dillon Precision CP 2000 and RL 1100.
- Case Preparation rate up to 3000 rounds per hour!
- Reloading rate up to 2000 rounds per hour!
- DA 3000 easily installs on your Reloading and Case Prep machines.
- Simply press the "Start" button – no more manual cycling of the machine.
- Adjustable Cycle Rate and Dwell.
- Dillon custom-built Industrial Controller.
- Integrated safety controls and shield.
- Field-tested and proven patented design.
- One-year warranty on the DA 3000.
- Maintains your Dillon-Factory machine warranty.
- Made in Scottsdale, Arizona USA.

Mr. Bulletfeeder®

by Double-Alpha

Mr. Bulletfeeder has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy – a world leader in practical-shooting-related product manufacturing and distribution – at the helm. The design allows the bullet collator to be mounted onto the casefeeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

Dillon's Range Bag[^]

33389 \$139.99

Borrowing design features from Dillon's original range bag, but with upgraded metal D-rings and clips for the shoulder strap, Dillon's "Retro" Gray Range Bag is constructed of heavy-duty ballistic nylon.

The primary compartment measures 14-1/4"x7"x8" and features two interior pockets measuring 6-1/2"x6-3/4" with hook-and-eye closure flaps. An additional interior pocket measures 5"x7-1/2".

The top cover can be quickly secured via hook-and-loop strips at the end or by two side zippers.

There are two zip-up outer compartments measuring 12"x8"x1-1/2". One of the outer compartments features extra padding for carrying a handgun, and the other has an external zippered compartment for pens, pencils, etc.

"Border Shift" Ammo Bag[^]

Dillon's two-compartment ammo bag is constructed with a flexible inner liner that will allow the entire volume to be accessible from either zippered opening. You'll never again mix fired brass with loaded rounds!

Border Shift Ammo Bag, Black	13755	\$39.99
I.D. Card Holder [^]	14575	2.99

Dillon Pistol Case[^]

Our pistol case was designed to hold and protect your pistol and carry 200 rounds of ammunition! The back side of the durable, ballistic nylon case features two pockets that will accept Dillon's 100-round ammo boxes. The case features a heavy-duty, locking YKK zipper, closed-cell foam padding and a suede-textured fabric liner to protect your pistol's finish. Measures 14" x 9".

How Dangerous Are TV Guns?

Smart Alec Prompts Review

By Alan Korwin

Is Hollywood and pop media hurting America the way so many people have been saying lately? During World War II those California-based folks were unabashed cheerleaders for our side, fighting for freedom, morality and against fascism and global control. Today? Not so much. You may not need an explanation, but here it comes.

Before we dig in, many of the leading men and women on screen served in our military, actually in the fight. They were familiar with firearms, unlike today, where “gun virginity” reigns. Even with big-tech subverting search tools, results on that are stunning. Actors pitched war bonds, produced hard-core propaganda shorts and full-length features defending – Truth, Justice and the American Way – a line from Superman comics. “Truth, tolerance and justice,” first appeared in the Batman/Superman #16 comic book, signaling impending upheaval, eliminating [The American Way](#).

“Truth, justice and...all that stuff,” left Superman’s lips in the 2017 film *Superman Returns*, enraging patriotic fans. Now it’s officially: “Truth, justice and a better tomorrow,” a clear swipe at America’s greatness, with tipped hats to globalism. Hollywood is full-on woke.

Guns and the Second Amendment

This magalog’s purpose, marketing and defense of legal, righteous civilian arms, and people like you who love and support that, have never gotten a fair shake in Hollyrot. We joke about it. It’s no longer a joke, if it ever was. It’s hurting us. The public is influenced by movies, which never get near gun safety, legal use or for that

matter reality. Guns are playthings, brandished and used indiscriminately. They clearly show movie types have never handled or fired real guns.

Is there anyone left who really believes guns never run out of ammo and just spray bullets? It’s the oldest laugh in the biz. A “real” film would have countless scenes of reloading, desperate and scary. When asked, producers and actors uniformly get defensive and talk about creating excitement and “suspension of disbelief.” Disbelief may be the watchword, but action and excitement do not require inane mythology.

Bullets don’t spark when they hit cars or miss. Exciting? Maybe. Visually appealing? To an ignoramus maybe, but it makes 100 million gun owners cluck their tongues, destroying truthiness. Screaming, “Get down!” when bullets take out all of a vehicle’s windows, so you can walk away and shoot back? C’mon, man. The bad guys all get wiped out when the tables turn and all their windows are shot. You don’t need to know anything to conclude that’s farcical. You do need a bit of knowledge to know car doors don’t stop bullets.

It’s a learning experience to observe grip. You can (and should) do this too. More than anything, this shows that producers, directors and actors cling to gun ignorance, they simply don’t know what they’re doing, with a vengeance. Solid firing grips are a rarity. You’ll see amateurish cup-and-saucer hold, maybe they like the feel. But it sure doesn’t hold a gun very steady. The worst is cretins who hold their forearm below the wrist. Looks so lame, isn’t anyone on set who can tell them they look

[Continued on Page 27](#)

“The public is influenced by movies, which never get near gun safety, legal use or for that matter reality. Guns are playthings, brandished and used indiscriminately.”

Dillon Die Sets

Sizing/Depriming Die (Pistol)

Our sizing/depriming dies feature a "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design is the long, tapered carbide ring with a radiused opening. That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die (Pistol)

Our quick-disassembly seat die allows the user to disassemble and clean the seating die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem. Dillon's double-ended design makes it simple to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time.

Crimp Die (Pistol)

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

---------------	-------	--------

Sizing/Depriming Die (Rifle)

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die (Rifle)

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die (Rifle)

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

BL 550[^]

Dillon's Basic Loader

\$395⁰⁰
15399

Reloading Dies and Caliber Conversions sold separately
Pictured with optional accessories:
Strong Mount 22051 \$95.00

Dillon's RL 550 has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles. The BL 550 is essentially an RL 550 without the automatic priming and

powder systems. Capable of loading over 160 calibers – just like the RL 550 – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550 loader! The interchangeable toolhead (Page 25) makes it quick, easy and inexpensive to change calibers.

AUTO PRIME SYSTEM[^] 16627 \$120.00

PRIMER SYSTEM EARLY WARNING[^]

Allows you to focus on loading instead of worrying about failing to seat a primer, and is an easy slip-on attachment to the auto prime system. 20302 \$37.00

AUTO POWDER SYSTEM[^]

Accurate to within 0.1 grain, our Automatic Powder Measure is world renowned for its charge-to-charge consistency. 20251 \$130.00

OPTIONAL MAGNUM RIFLE POWDER BAR

21353 \$45.00

AUTO EJECT SYSTEM[^]

Greatly increases your ammo production capabilities and adds a Cartridge Chute/ Bracket and a Cartridge Bin to your reloader. 22120 \$43.00

BL 550 POWDER DIE[^]

Extra powder dies for your BL 550 make it easier to set up additional toolheads for loading different calibers.

Powder Die: 16629 \$27.00

Oversize Die: 16626 29.00

Plastic Funnel: 16617 9.00

POWDER MEASURE ADAPTER

If you load rifle cartridges with long-grain extruded powder, you can now use any manufacturer's powder measure with 7/8" x 14 threads on your RL 450, AT 500, BL 550 or RL 550. (Requires the use of an RL 450 powder die – see below.) 20029 \$32.00

RL 450 Powder Die 20308 32.00

How Dangerous Are TV Guns? *Continued from Page 19*

foolish to half the nation? No suspense would be lost, no action decreased, nothing lost with proper grip, and that's a minor issue.

More significant is muzzle control. Though Hollywood as a bloc jumped to "wise" Alec Baldwin's defense when he shot his talented young female camera operator to death, without touching the trigger (impossible of course but so he claims), it's proof that Hollywood's loud jabber about "no pointing" gun safety is a lie. Mass media parroted it without even looking at films, where pointed guns are standard. I want you to start watching for grip and pointing, it's educational.

Captain Kirk and Mr. Spock jauntily cover each other with their phasers, triggers fingered of course, where "flesh wounds" (more on that later) don't matter if you're cut in half or vaporized. But that's fantasy from the outset so it doesn't count (it does to me). When energy weapons do arrive, soon, they should be as publicly available as they will be to "officials," don't forget that. Balance of power, you know, and bad guys won't be stopped by phaser bans.

Countless films have criminals touching guns to heads to threaten and coerce information – how does that escape the "we never point guns at people" lie? Good

guys dangerously and foolishly come within quick-grab distance, so they can be disarmed and murdered by villains, no squirming out of that. Just know Hollyrot and their mouthpieces are blatantly, self-evidently lying to your face. They demonstrate zero respect for you or truth. That's just true. If they were as imbued with the safety rules as you readers are, they couldn't manage to act that way. It so goes against your nature, no matter how "cold" (a newly invented term and bad idea) the plastic-phony "prop" guns are.

As space runs short here, let me mention that no person has ever been blown backwards through a window after getting hit by a 9mm round – or any round. If that were plausible, the pure physics of equal-and-opposite action-reaction would send the shooter through a wall too (with a broken hand). Coming soon, more of our favorite dangerous video gunplay, falsely training youth and adults that holding pistols (never revolvers) sideways makes sense. Readers: send me your favorite movie-gun stupidity, I'll include it.

Award-winning author Alan Korwin has written 14 books, ten of them on gun law, and has advocated for civil rights for nearly three decades. See his work or reach him at **GunLaws.com**.

Shooting Mat

Dillon's shooting mat is made of tough ballistic-weave nylon fabric, with a large skid-resistant elbow pad area. The "ground" side is moisture resistant and wipes clean easily. The padding is dense, closed-cell foam to provide both shooter comfort and a stable shooting base. The mat is equipped with a shoulder strap, a carry handle and two straps with snap-release buckles.

Dimensions: 66" x 27.75"

Dillon Reloading Accessories

A Strong Mount increases your machine's "footprint" to over 10", spreading the load over the whole bench instead of stressing the leading edge. For XL 750/650 owners with limited overhead clearance, the XL 750/650-only mount raises the machine 6" above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL 550/XL 750/650	22051	\$95.00
XL 750/650-only	22052	93.00
"SDB"	22223	105.00

These plates bolt directly to your bench top, and are drilled and tapped to allow mounting your reloading machine directly to the top of the mounting plate.

Stock #62005, \$95.00 is for:

XL 750, XL 650, RL 550 and Square Deal "B". **Stock #62006, \$95.00** is for:

RL 1100, CP 2000, Super 1050 and RL 1050 as well as any Dillon reloading machine that is mounted on the Dillon Strong Mount.

Our Bullet Tray is a simple, shallow aluminum tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL 550 and XL 750/650 when equipped with the RL 550/750/650 Strong Mount, and a separate kit is available for the RL/Super 1050.

Bullet Tray Kit	22214	\$60.00
1050 Tray Kit	22215	60.00

The Low Powder Sensor provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

16306	\$52.00
--------------	----------------

Our Toolholders are available for your reloading machine and ensure that the tools you need to service your reloader are handy and organized. No more digging around your bench trying to find the right size hex wrench!

XL 650 with Wrench Set	11555	\$44.00
RL 550/XL 750 with Wrench Set	11541	42.00
SDB with Wrench Set	19441	41.00

Blue XL 750/650	62136	50.00
Black XL 750/650	62137	50.00

The Square Deal "B" Toolhead Stand holds your SDB toolhead, powder measure, dies and caliber conversion components (*not included*) in an orderly manner.

62225, \$45.00

Our Toolhead Stands for the RL 550 and XL 750/650 are the ultimate in convenience for keeping your reloading bench clean and uncluttered.

22055, \$29.00 each

Dillon's 1050 Toolhead Stand is now available to store caliber quick changes for the 1050.

62200, \$58.00

Equipment Dust Covers are made of tough packcloth nylon and add security to your loading bench. Your reloader will be protected against more than dust as the machine covers come with a D-ring that allows the heavy duty zipper to be locked.

SDB/550 Cover	13795	\$24.99

Our **Primer Flip Tray** is a heavy, high-quality tray large enough for the Federal primer package.

13606, \$27.00 each

Primer Pick-Up Tubes are used to transfer primers from flip tray to priming system. Having extras pre-loaded with primers makes it easy to load a pre-determined amount of ammo without having to stop to pick up primers.

1 Large	22029	\$10.00

4 Small	20049	35.00

“D-TERMINATOR” Electronic Scale

- 1500 grain/100 gram capacity
- Accurate to 0.1 grain/0.01 gram
- Uses four AA batteries (included)
- Comes with its own AC adapter
- 100g scale check weight included

NOTE: Dillon electronic scales are covered by a one-year warranty from date of purchase.

\$149.99
10483

Dillon's **“Belted Magnum” Powder System** features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

97126 \$205.00

The **Powdercheck System** (available for XL 750/650 and Super 1050 reloading machines) sounds an alarm if the powder charge in a round is out of limits either high or low.

21044, \$93.00 each

An **Aluminum Roller Handle** gives your reloader an entirely new “feel,” reduces operator fatigue, and makes primer seating easier.

17950 \$64.00

Dillon's **1” Bench Wrench** fits our 1” Die Lock Rings which give you more space on the toolhead.

10842, \$15.00 each

Our **Machine Maintenance Kits** come with everything you need to keep your Dillon loader cleaned and lubricated up to factory specifications. Available alone or in combination with a spare parts kit for your machine.

Maintenance Kit Only	22211	\$38.00
w/SDB Spare Parts Kit	97015	57.00
w/550 Spare Parts Kit	97016	58.00
w/750 Spare Parts Kit	97500	70.00
w/1050 Spare Parts Kit	97018	75.00

RF 100 Automatic Primer Filler

The **RF 100 Automatic Primer Filler** eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run! In about two minutes the primers are inside the protective metal housing.

Large Primer Filler	97077	\$449.00

Lyman Neck Expander Die

Improves accuracy of cast and jacketed bullet reloads. Extends case life. A "Must-Have" die for the cast bullet or flat-base bullet user. The first step expands the inside of the case neck to just under bullet diameter for precise case neck tension in the finished reload. The second step expands the case mouth to bullet diameter or slightly over. This allows the jacketed or cast bullet to be started perfectly centered in the case mouth and properly aligned with the axis of the case neck. By adjusting the

plug slightly deeper, the second step also provides a slight flaring of the case mouth for reloaders using cast bullets.

Dillon AkroBins[^]

AkroBins are ideal for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550/XL 650/750 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Handling components, ammunition, cleaning firearms or discharging firearms in poorly ventilated areas may result in lead exposure. Have adequate ventilation at all times and wash your hands thoroughly after exposure.

Shellsorter

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

Tatiana Whitlock

**The Warrior
Pixie of Maine**

Tatiana instructing a teen trainee in the use of a Midwest Industries light carbine.

By Oleg Volk

In literature, the term Mary Sue refers to female protagonists who are so unreasonably multi-talented as to represent the author's wishful thinking for self, rather than any realistic person. In reading Tatiana Whitlock's credentials and bio, that term would have come to mind except for her being entirely real. She is best known as a preeminent shooting and self-defense instructor. She has been a contributing writer for numerous print magazines. As a professional female shooter, she has represented major gun and accessory brands. A graduate of Rhode Island School of Design, Tatiana worked in print media and digital marketing, packaging design, graphic design, web design, and brand development. She also engineered consumer products including children's and pet toys, medical devices, media packaging, fishing tackle, and many others. And in-between all that, she managed to raise a family and get featured in many of my photographs. How did this eclectic high achiever evolve into her present state?

I met Tatiana Whitlock in Nashville when she and another instructor came for a visit. At the range, I was impressed by the rapidity and accuracy of her rifle fire. In later encounters, she impressed with pistol and shotgun, with hand-to-hand prowess, and with her course design. She even designed unique 3D targets that could be made reactive with party balloons hidden within – popping the balloon dropped the photorealistic “foe.” Going

through her courses and watching family members come out with vastly improved confidence and skill sets, I couldn't help but wonder how she got to be so good at passing the formidable fighting skills along.

Her shooting journey began quite by accident. After birthing two children 16 months apart, helping her grandparents through end-of-life hospice care, closing one family business, and helping to launch another, Tatiana was advised by then-husband to get a hobby. She did need something to feed her soul, and to break away from the stresses of life. Having grown up in a family of artists, musicians, engineers, and designers, she already did traditional hobbies and crafts. Tatiana looked elsewhere for an experience outside of her comfort zone. During a late-night internet search for a new hobby, she thought of recreating a hunting experience from her early teens. Sitting with father and brothers in a saltwater duck blind along the coast of Maine, nibbling on frozen peanut butter and jelly sandwiches was a fond memory. Shooting was just a way to participate as an equal, not just as a tag-along observer. Wanting only to surprise her family with the knowledge, skills, and tools to join them on a hunt, Tatiana didn't know that this initial spark of motivation would propel her into NRA Women on Target class.

After that first class Tatiana was hooked. Being an immersion learner by nature, she joined the local rod and gun club, purchased a handgun, and signed up for

every class the gun club had to offer, all within the first week. Each class sparked new curiosities and questions, which led to the next class, soon maxing out what Maine facilities had to offer. Her mentor at the time, the president of the gun club, encouraged looking out of state for additional training. To avoid embarrassment at the more advanced programs, Tatiana spent a lot of time between classes practicing at the range. As others observed her working through range drills, the requests for lessons became too frequent to ignore. She studied to become an instructor. As most civilian shooters do, she completed the NRA instructor and RSO programs, got insurance, and started out small by working one-on-one with new shooters. From those, small-group events grew, then even larger classes. Being a perpetual student herself, Tatiana began keeping two travel notebooks, one on the material she was learning and the other on observations of how the instructor taught, mentored, coached, and generally inspired others. Both elements continue to fascinate her: Tatiana takes great interest in both the study of the art of shooting and in the art of educating. As learning and teaching continued, she found a new life within the shooting sports and self-defense industries.

Tatiana stays on top of new developments and absorbs classic wisdom too. She loves books about shooting and self-defense by authors old and new, such as Brian Enos and Varg Freeborn. Mentors like Super Dave Harrington help evaluate new ideas, sometimes diving into extensive debates on the nuances of trigger press or the management of students on the range. Constant evaluation of new ideas to develop better, more-effective methods for explaining complex concepts to students has yielded impressive results. In her classes, I have watched learners who struggled with accuracy, safety,

or speed make impressive performance and comprehension leaps. She strives to observe and respond correctly to the needs of each individual on the line. "Becoming a better communicator is profoundly satisfying," she says. "Participating in classes of my peers, mentors, and idols is of course a never-ending joy. I will always be a student of the gun first."

Understanding the motivation for a task makes learning it more efficient. Tatiana, with her two small babies, was

stalked through a grocery store and a parking lot. The gut-wrenching reality of vulnerability drove the need to carry concealed home for her. She felt brutally vulnerable that rainy afternoon, driving anywhere except back home, hoping that the stalker would finally go away. He got lost just as she was ready to drive to the local police station, but the unsettled feeling of being hunted persisted for weeks. In that moment, looking in the rear-view mirror at the sleeping children in their car seats, Tatiana knew that as a single mom she was entirely responsible for their safety. Shooting training took on a whole new meaning, the defensive use motivating her pursuit of excellence from that moment on. Her teaching philosophy is rooted in context: skills paired with reasons, motivations, and application in a deadly force encounter are the heart

of every shooting exercise. The greater realization from that stalking was the need to become a better thinker and decision maker, a well-rounded personal first responder. Bringing students through that thinking process by which they also come to this realization is a major part of her defensive shooting curriculum. Being a great shooter isn't enough: competent decision making and problem solving are necessary parts of the concealed-carry mindset.

Every brand Tatiana has worked with over the years values representing strong, intelligent, and competent

Engaging a photorealistic reactive 3D target of her own design.

Teaching a course at Royal Range in Nashville, Tennessee.

Instructing in the basics of AR-15 use.

Beginner handgun course in Maine.

Evaluating the results of a live-fire exercise with a student.

Demonstrating marksmanship with a Walther PPS M2.

female shooters. They embrace these qualities, understanding that formidable characters appeal to more women shooters than overly sensualized dolls. As a professional female shooter, she has represented brands like Walther Arms, Nighthawk Customs, Trijicon, and several others. Her favorite firearm is Walther PDP; she participated, along with the others in the Walther Defense Division, in the developmental design of the PDP. Their input resulted in superior ergonomics. She will always have a soft spot in her heart for 1911s, especially from Nighthawk Customs.

Guns aren't the only weapon she can use. From age 10 to 18, she studied Shaolin Kenpo and Brazilian Jiu Jitsu.

For the following decade, she dabbled in Krav Maga, Muay Thai, and boxing. Self-defense isn't the only task for her firearms, either: with the help of a Maine Master Guide, she learned about the ecosystems of her native Maine, fell in love with the wilderness once again, and harvested a big, tasty bear. After picking up hunting again as an adult, Tatiana intends to bring her children and husband into the outdoorsman culture to continue the tradition. Beyond her close-knit family, she is an influencer and a motivator for many. A true industry star, Tatiana avoids notoriety, preferring to sharpen her own skills and to teach others. The key to her success is quite simple, really: a lot of talent alloyed to a lot of hard work.

HYSKORE Six-Gun Modular Pistol Rack

The HYSKORE Six Gun Modular Pistol Rack is constructed from closed-cell, non-reactive foam that will not absorb moisture or react with lubricants or solvents. It has a soft, suede-like finish, but is rigid enough to offer firm support. The modular feature of the rack also means that two or more racks can be connected together and reconfigured to take maximum advantage of all available space in your safe or vault. The rack measures 11-1/4" wide x 7-1/2" deep x 6" high.

All-in-One Torque Driver Kit

Featuring the Fix It Sticks All-in-One Torque Driver. Tighten down your scope rings, mounts, action screws, etc. while in the field, at the range, or at home. Kit includes: All-in-One Torque Driver (15 - 65 inch lbs); T-Way T-Handle Wrench; 15 different bits: T10, T15, T20, T25, [hex 3/32, 5/64, 1/8, 5/32, 3/16, 2.5mm, 3mm, 4mm, 5mm], P1, slotted #5; 1/2" Socket and 1/4" bit adapter set; and Zippered case with Molded Holder.

29835 \$112.00

Replaceable Edition Shooting/Hunting Kit

This kit offers unmatched portability, functionality and versatility. Two Fix It Sticks (which combine to form a T-Handle) and 16 bits are held in a molded bracket for portability/storage. Extra room on each end can hold two additional bits. Includes two sticks, bracket, and 16 different bits: 2.5mm Hex, 3mm Hex, 4mm Hex, 5mm Hex, T-10, T-15, T-20, T-25, T-30, 1/8" Hex, 5/64" Hex, 3/32" Hex, 5/32" Hex, 3/16" Hex, Slotted #5, and Phillips #1.

29843 \$40.00

Mini All-in-One Torque Driver

Tighten scope rings, red dot sights, mounting plates, etc. Just turn the drive handle until the hash mark lines up with the torque value you need (from 6 - 25 inch-lbs).

29837 \$55.00

All-in-One Torque Driver

Tighten scope rings, mounts, action screws, etc. Just turn the drive handle until the hash mark lines up with the torque value you need (from 15 - 65 inch-lbs).

29836 \$60.00

Scope Bubble Level Set

Level your optics with machined aluminum levels, featuring precise UK-sourced bubble vials. Kit includes: Magnetic level, NATO/Pic rail level/anti-cant device, and Protective foam carrier with pouch.

29839 \$50.00

Scope Jack

A new way to level your optic, the Scope Jack works with any 1/4 inch driver to quickly and easily level your scope to your NATO/Pic rail. Just mount the Scope Jack to the rail under your scope and turn the drive handle until the lifting arm engages with the flat section under your turrets. Once the scope is level, maintain pressure while tightening your ring screws to keep optic level throughout the process.

29838 \$44.00

Bolt Carrier Group Scraper

Custom bit that is designed to clean carbon off the various surfaces of the Bolt Carrier Group. Works with any standard magnetic 1/4" driver. Black Isonite finish for increased corrosion resistance and strength.

AR-15 (Top) 29840 \$10.00

SAFARILAND®

A lightweight defensive/competition pistol holster with low-cut sides and open top for a rapid draw. A trigger guard detent and adjustable tension device reliably secures the pistol in the holster during rigorous activity. SafariLaminate™ construction makes this holster tough enough for constant wear. Includes both injection-molded paddle and belt loop. IDPA and USPSA approved.

5.11 Tactical®

Double Duty TDU®

Trainer

Operator

The Double Duty TDU® belt is metal-detector friendly and offers two color options. Both the Trainer and Operator belts feature 6,000-pound-test buckles and heavy, reinforced stitching, therefore can be quickly converted into secure tie downs, secondary carry straps or emergency harnesses. All 5.11 tactical belts are made of strong nylon webbing and provide a stable support for carrying firearms and accessories. According to 5.11 Tactical, belt sizes run small, so they recommend you order one size up for the best fit.

Be an AGI Certified Gunsmith. Study and work from home with the Freedom and Security of being Your Own Boss!

FREE New Book and Introductory Video Gunsmithing Lesson Will Show You How!

If you want to experience the freedom and security of being a Gunsmith you need to get this FREE information package which includes a one hour video Gunsmithing lesson and a FREE copy of the new book "Becoming An American Gunsmith." (Just pay \$9.97 for priority mail shipping and handling)

This complete package explains how to become an AGI Certified Professional Gunsmith without having to give up your lifestyle, income, leave home, or spend tens of thousands of dollars attending a campus based school.

You will be able to study-at-home, get Certified, and could start making money full-time, part-time or as a retirement income, in as little as 90 days! In the book "**Becoming An American Gunsmith**," AGI President Gene Kelly details how mastering the Design, Function,

and Repair (DF&R) training concepts taught exclusively by American Gunsmithing Institute Master Gunsmiths will enable you to maintain, repair, build, and customize firearms as an AGI Certified Gunsmith. People who do not possess a comprehensive understanding of Design, Function and Repair are NOT gunsmiths, they are just parts swappers.

There is a HUGE demand for Gunsmiths and millions of guns out there that need PROFESSIONAL cleaning, maintenance, customizing, and repair right now. You can even work part-time right from your home! *This information package shows you how! (DISABLED VETERANS: You can have the government pay for your training - contact us for details.)* This package includes:

- Six actual gunsmithing lessons
- How to get your FFL
- Answers to the most commonly asked questions about gunsmithing
- How to set up your shop
- What tools and equipment are *really* necessary
- The truth about why, if you love guns, gunsmithing is the perfect career for you
- How to establish a *successful* gunsmithing shop

Through the American Gunsmithing Institute's study-at-home Virtual Campus,™ Master Gunsmiths teach you gunsmithing step-by-step using video instruction with cutaway firearms that take you deep inside the guns.

This FREE information package will come with everything you need to know about how to get started Gunsmithing INCLUDING a One Hour Introductory Video Gunsmithing Lesson! Just pay \$9.97 for priority mail shipping and handling!

You get everything shown here!

"Your program changed my life for the better. Hands down, the best knowledge base I have seen. The instructors are true Masters of their trade.

Thank you again for your dedication and perseverance."
James N. Woods, Gunsmith, CJ's Custom Shop

"Words can't express how thankful I am that you put the time and effort into making these courses on video! This is such a wealth of knowledge that I can refer to long into the future when I get those tough jobs and get in a bind and need help! The fact that I have an AGI Instructor with me anytime I need him is worth more to me than you will ever know! What an incredible treasure! Thank you so much"

James E. Legg

"GHOST" AMMUNITION

By Jimmi Bonavita

Photos by Miles Lumbard

The current "cause célèbre" with the Anti-2A crowd is "Ghost Guns," a euphemistic term referring to those firearms manufactured without serial numbers. The Left's new Boogey Man is causing panic as they insist the "need" for all firearms to be serialized, and thus "traceable." But since 1776, it has been perfectly legal for any U.S. citizen not otherwise prohibited from owning firearms to make firearms for his/her personal use without serial numbers, and since 1968, as long as those firearms are not produced or meant for interstate commerce or transfer.

Before the Gun Control Act of 1968 (GCA '68) was signed into law by President Lyndon B. Johnson on October 22 of that year, U.S. arms manufacturers were not required to apply serial numbers to firearms! In fact, hundreds of thousands of lower-end rifles and shotguns manufactured by Marlin,

Remington, Winchester, Savage-Stevens, and others were sold as store brand "promotional" guns by major retailers such as Sears, Montgomery Wards, Western Auto, etc. I have a number of them in my own collection,

and you most likely have a few, yourself. Nothing nefarious about it whatsoever: it was simply a production simplification and cost-cutting measure, nothing more. But the GCA '68, in addition to requiring that a serial number be affixed to each firearm leaving a factory, also makes it a federal felony to remove, deface or change an existing serial number on any firearm. (This fact once gave me the probable cause to investigate, and then prevent, a pair of contract murders during my undercover stint as a professional "hit man.") The Federal Bureau of Alcohol, Tobacco, Firearms and

Explosives (BATFE, or ATF for short) claims that 5-10% of firearms recovered in crimes have obliterated serial numbers and/or other markings, however most modern

**"SINCE 1776, IT HAS BEEN
PERFECTLY LEGAL FOR
ANY U.S. CITIZEN NOT
OTHERWISE PROHIBITED
FROM OWNING FIREARMS
TO MAKE FIREARMS
FOR HIS/HER PERSONAL
USE WITHOUT SERIAL
NUMBERS."**

Sterile 7.62x39mm Ammunition, left to right, Bell Laboratories (light blue primer lacquer moisture sealant), and Lake City Ordnance Plant (red primer lacquer moisture sealant). Note the markings on the boxes.

"Ghost" Ammunition Cartridges, left to right, .44 Colt, .38 Short Colt, 9mm Luger, .32 ACP and .25 ACP.

law enforcement (LE) forensic labs now have the ability to restore such obliterated serial numbers. Purposely manufacturing a firearm without a serial number for “commercial” purposes is now illegal by federal law. But now the Anti-2A crowd wants to universally extend this to your personally produced firearms never intended for interstate commercial sales, arguing that your only reason to produce them is for criminal intent!

The ATF reports approximately 1,500 tracing requests daily from various LE agencies nationwide, and no sane person could reasonably argue that firearms suspected of being associated with a crime shouldn’t be traced. But the bulk of traces occur during routine traffic stops or field interviews where guns are merely present in order to locate and seize stolen weapons not necessarily involved in other crimes. I’ve done it myself many times in my 28-year LE career. Of the over one-half million firearms traced annually in the U.S., only 0.011% are associated with serious, violent felonies. I have rarely experienced the tracing of a serial number that factored into solving an armed robbery, malicious assault or homicide, Hollywood notwithstanding. But on a personal and positive note, serial number traces have led to the recovery of three of the four handguns stolen from me (all by acquaintances!) during my lifetime.

But what about unmarked, “Ghost Ammunition?”

The first unmarked metal-cased cartridge ammunition was undoubtedly due to production simplification (and thus, a cost-reduction decision), as was the case of the pre-1968 firearms previously mentioned. Again, nothing sinister. The Civil War-era copper-cased .44 Henry rimfire cartridges made in 1860 by the New Haven Arms Company for the Henry repeating rifles were the first. Smith & Wesson followed in 1870 with the .44 Russian caliber centerfire cartridges made for their .44 Smith & Wesson Model 3 American revolver, the first true cartridge revolver issued to the U.S. Military (1870-1874). A number of other cartridges of various calibers, sans markings, followed over the next century-and-a-half. I own, or have seen such cartridges in .22 rimfire, .25 ACP,

9x19mm, .38 Short Colt, .44 Henry rimfire, .44 Smith & Wesson Russian, .44 Colt, 7.62x39mm, 7.92x57mm (8mm) Mauser, and 7.62x51mm NATO (.308 Win.), again most of it unmarked to reduce production cost.

But clandestine “Sanitized” or “Sterile” ammunition has been manufactured by a number of nations in the past to specifically deceive and/or confuse during wartime or sensitive international situations. Sterile 7.62x39mm ammunition was manufactured in the U.S.

**“CLANDESTINE
'SANITIZED' OR 'STERILE'
AMMUNITION HAS BEEN
MANUFACTURED BY A
NUMBER OF NATIONS IN
THE PAST TO SPECIFICALLY
DECEIVE AND/OR CONFUSE
DURING WARTIME OR
SENSITIVE INTERNATIONAL
SITUATIONS. STERILE
7.62X39MM AMMUNITION
WAS MANUFACTURED IN
THE U.S. FOR CLANDESTINE
USE DURING THE VIETNAM
WAR BEGINNING IN 1970
(AND CONTINUING INTO THE
1980S) FOR THOSE AREAS
OF OPERATION (AOS) THE
US WISHED TO DENY.”**

for clandestine use during the Vietnam War beginning in 1970 (and continuing into the 1980s) for those areas of operation (AOS) the US wished to deny. Based on Lapua’s 7.62x39mm design, they were produced by at least three separate manufacturers with two clear objectives: initially to provide untraceable ammunition to anti-Khmer Rouge Communist guerillas in Cambodia between 1970-1975 for use in reconditioned CIA-provided AK-47 and AKM assault rifles and SKS Carbines, and later, to supply ammunition for Army Special Forces and SEAL unit’s indigenous-issued weaponry on clandestine operations for the purpose of “plausible deniability.” In addition to FMJ rounds for combat use, unmarked 7.62x39mm blanks were also produced for use in simulation training on U.S. soil (Fort Polk, LA, and probably other locations) prior to its deployment in Southeast Asia. Lake City Ordnance Plant (LC), and the Frankfort Arsenal (FA) produced both sterile 7.62x39mm ball and blank cartridges for use by American and allied troops, and later, by Bell Laboratories (BEL). They were always packed in bland, 20-round cardboard cartons that lacked the normal contractor codes, batch numbers and dates (see *photo*).

However, the origin of manufacture on these sterile cartridges can easily be determined today by the color of the lacquer moisture-sealant used on the primers: red for Lake City, purple for Frankfort Arsenal, and light blue for Bell Laboratories.

Common sense indicates (at least to me) a much more effective and believable scenario would be to acquire foreign manufactured ammunition (Chinese or Russian, etc.) in sufficient quantities through either clandestine

purchase or capture/seizure, as has been done in other world conflicts. Such captured or counterfeited ammunition would serve just as well, if not better, without generating unnecessary suspicion. Ask yourself, who else would have introduced sterile ammunition into the jungles of Vietnam other than the CIA? But then again, other nations have done likewise in the past, too! Curiously, almost all small arms ammunition produced by Imperial Japan during WWII for their Army and Air Force in 6.5mm and 7.7mm rimless had plain (unmarked) headstamps, although the boxes they came in were marked normally. Only the Japanese Navy 7.7mm rimmed ammunition had regular headstamps! Portugal is also known to have produced 7.92x57mm (8mm) Mauser in the 1970s.

"Disguised" or counterfeited headstamps are also known historically to have been utilized for deception and/or confusion on occasions. Germany made 7.92x57mm

ammunition with just the abbreviated caliber designation "7.92" on the headstamp for the nationalists during

the Spanish Civil War (1936-1939), Italy produced .303 British ammunition in the 1950s for Egypt with rearranged lettering and a false Arabic date on the headstamp to disguise its origin, and China produced steel cased 7.62x51mm NATO ammunition around 1969 with false British headstamps.

Regardless of the intent or purpose of unmarked "sterile" or "sanitized" ammunition, it is highly collectible, and occasionally can be found "in plain sight!" A couple of years ago I stumbled across one of the two 20-round boxes of sterile 7.62x39mm ammunition shown here. A quick email to the seller revealed he had acquired a case from an old Vietnam buddy and had finally decided to sell it. I purchased the entire case from him for the price of standard

7.62x39mm ammunition!

"Some days you eat the bear!"

DILLON RIFLE COMPANY

The OPAR Operator Trigger is a complete-assembly pre-stage drop-in trigger purpose built to provide improved trigger pull weight, reset, clean feel, precision, and safety for day-to-day users, military and law-enforcement members and agencies. The trigger's form enhances precision capabilities through its Area-of-Engagement design. This is accomplished by helping shooters build muscle memory for their trigger-finger placement in a simple and natural way.

It has a clean 5.0 to 5.5-pound trigger pull weight with a short trigger reset. The OPAR Operator's patent pending pre-stage trigger mechanism design has an inset secondary trigger providing an additional safety mechanism to reduce the chances of an accidental discharge. The OPAR Operator is compatible with AR-15 and HK416 rifles using the Mil-Spec 0.154-inch pins.

Nighthawk Custom Drop-In 1911 Trigger System

When looking to upgrade the performance of a 1911 pistol, a common improvement sought by shooters is a high-quality trigger job, with a crisp, clean break. Until now, a high-quality trigger job has never been in the realm of a "drop-in" upgrade. Nighthawk Custom has changed that with the introduction of its Drop-In Trigger System (DTS) for 1911 pistols.

An all-in-one unit, the DTS replaces your existing hammer, hammer strut, sear, disconnector, and sear spring. Your existing sear pin and hammer pin will be retained for use with the DTS, but no other parts are necessary for installation. With a steel housing securing the unit, the DTS features all Fully Machined™, stainless steel internal components. The traditional three-pronged sear spring is no longer necessary as the springs for the disconnector and sear are built into the unit. A single-leg grip safety spring is included with the DTS to replace the existing sear spring.

The DTS is designed for use in most 1911 models, and installation is simple enough that minimal gunsmithing skills are necessary.

Case Gauging Your Reloaded Rounds: The Step You Should Never Skip!

By Jerry D'Amico

I shot a match a while ago and a fellow shooter had a gun that just wouldn't run. On every stage it would fail to feed and jam every few rounds until he finally gave up.

I wanted to help, so I asked the first question I always ask when this happens (as it does all too often), "Did you case gauge those rounds?"

I got the answer I always get...a hesitantly unconvincing "yes." But when I asked the second question I always ask, "Did you case gauge ALL your rounds?" The answer was, not surprisingly, "Well every 10th round or so." At the risk of sounding like a wise guy I replied, "Then why don't you just shoot every 10th round or so.!" I once had a student reply, "Well I randomly case gauged them." Once again, my reply, "Well why don't you randomly shoot the ones you randomly case gauged!"

You can be the best, most experienced and meticulous reloader, but if you skip what I consider the final and most important step in the process – case gauging your rounds – you have wasted your time and are just asking for trouble!

Most of us know what case gauging is. You drop your loaded rounds into a steel cylinder gauge that has been precision machined to the correct chamber specifications for a particular caliber, including case dimensions, crimp and overall length, and check to make sure it fits correctly. If it drops in, seats correctly and

drops out when you flip the gauge over, you are good to go...simple. But be aware that some rounds that gauge properly may not drop freely when you turn the gauge upside down and may need a little "nudge" to get them to come out. They should be checked closely but needing a "nudge" doesn't necessarily mean they won't feed, chamber, fire and extract. Like case gauges, case brands can vary in tolerances. That's why we sort and separate our cases by brand and prefer one manufacturer for best results.

We know that some shooters use the barrel of the gun they intend to shoot their ammo in as a case gauge. That may work but you won't be able to accurately judge proper fit as easily as you will with a precision machined case gauge. It is almost like using a ruler to measure something when you really should be using a micrometer! Also, you can only be reasonably certain your rounds will function in THAT GUN, while rounds that pass a quality case gauge are more likely to function in most if not all guns of that caliber.

Case gauges vary greatly in type, price, brand and even dimensions! Since you are dealing in tolerances of thousandths of an inch, you will find your rounds may fit in some brands but not necessarily in others.

Do some research before selecting the brand of gauge that is right for you, rifle or pistol. One company makes "slotted" gauges for rifle ammo so you can check

For best results keep your case gauges CLEAN!

I prefer my seven-round .45 ACP gauge pictured, for example, as to me it is just the right number to visualize at once. You can see in the photo all seven rounds fit “flush” with the surface of the gauge, so they are good to go.

But, look closely and you will see another advantage of using a multiple-round gauge. I selected these rounds specifically for the photo. Look across the top and you will see the round on the far left has a properly seated primer with the “bevel” at the edge of the primer pocket clearly visible. The other six have either partially crushed and or improperly seated, so-called “high” primers.

dimensions along the entire length of the round. It helps to have several brands of one caliber on hand as I do to compare and double check your rounds.

Case gauges will catch a variety of problems that include but are not limited to insufficient crimp or damaged case mouths, excess overall length and even split cases. Sometimes even nicked or damaged case rims will prevent a round from dropping completely into a gauge but may not prevent the round from feeding, chambering, firing or extracting.

Single-round case gauges work just fine but in recent years multiple-round gauges have become very popular. They allow you to gauge multiple rounds at once, saving you time and effort. But trying to check too many rounds at one time can become counterproductive and lead to errors.

I prefer my seven-round .45 ACP gauge pictured, for example, as to me it is just the right number to visualize at once. You can see in the photo all seven rounds fit “flush” with the surface of the gauge, so they are good to go.

But look closely and you will see another advantage of using a multiple-round gauge. I selected these rounds specifically for the photo. Look across the top and you will see the round on the far left has a properly seated primer with the “bevel” at the edge of the primer pocket clearly visible. The other six have either partially crushed and or improperly seated, so called “high” primers. The problems are more obvious on five of the other six cases but less obvious on the second case from left in the bottom row. If you were dropping those six into a single gauge

one at a time you might miss one or more of those bad primers! But viewing seven at a time, bad primers will stand out and you can more quickly and easily compare and catch any priming problems.

For best results keep your case gauges CLEAN! Wipe the inside thoroughly with a cotton swab moistened with solvent or mineral spirits before EVERY use and frequently while gauging each batch of loaded rounds. You will be amazed the crud that comes out. Once again you are dealing with tolerances in the thousandths of an inch, it only takes a little accumulated case lube, dirt, grime or dust particles from tumbling media to keep your round from gauging properly and producing a “false negative” so to speak. Yes, tumbling media, a lot of shooters dry tumble their loaded rounds to remove case lube and give them a final shine. A clean gauge is also more likely to allow a loaded round to fall out when you turn it upside down.

It’s true, case gauging is tedious, time consuming and BORING! But it is the best way to guarantee that your reloaded rounds will be most likely to feed, chamber, and fire and extract every time!

Real Avid Level-Right™ PRO

el reticle is critical to long-range accuracy. For longer shots a canted reticle will push a bullet's trajectory off of center. It gets worse the more the increases. A level scope means that

the reticle will be perfectly aligned with the rifle bore. Balancing small levels on a scope turret and gun receivers has been a commonly accepted practice for years. Not only is this a clumsy process, it's wrong. The turret on most scopes is not perfectly aligned with the reticle, so even if your turret is level to the gun, your scope may not be. Level-Right PRO simplifies scope alignment in four easy steps. Accurate and intuitive, this instrument quickly aligns the actual scope reticle to the horizontal gun plane, which is key to the long-range accuracy of your rifle. Level-Right PRO helps you quickly and confidently mount a scope for maximum accuracy.

Level-Right PRO 21777 \$69.99

The Specialized Dynamics AR15/AR10 Armorers' Upper Receiver Block is made from billet aluminum and holds your upper receiver securely in order to make it easier to install barrels, free-float tubes, muzzle devices, etc. One block fits AR15s and ArmaLite and DPMS platform AR10s.

Action Enhancement Trigger for Springfield Armory Hellcat

The Action Enhancement Trigger for the Hellcat pistols is the easiest, quickest upgrade you can do to the trigger system that significantly improves the feel of the trigger pull, without reducing factory safety values. When properly installed, this drop-in trigger will:

- Reduce trigger pull weight to 5.0 to 5.5 lbs after break-in
- Smooth uptake and reset
- Reduce trigger overall travel and reset distance
- Deliver a crisp trigger break
- Directly replaces factory components without additional fitting
- Maintains factory safety values

The Master Bench Block™ is the most comprehensive AR15 bench block ever! It allows you to tap 13 critical pins from 5 different components. The block is wrapped in an over-molding that grips to your bench to prevent slippage.

29033 **\$34.99**

This advanced kit includes every standard and roll pin punch needed to build or work on an AR15.

29032 **\$39.99**

The Chamber Boss –AR15™ All-In-One AR15 Chamber Cleaning Kit. Every tool you need to easily eliminate baked-on carbon from the AR15 chamber.

21778 **\$29.99**

Installing a pivot pin is a small step that can quickly become a giant pain in the neck. Meet the AR15 Pivot Pin Tool – the one tool guaranteed to take the nail biting, pin-launching task of installing a pivot pin and turn it into something you might actually look forward to. Align the guide, insert the spring and detent pin, slide the pivot pin into place. Click. Snap. Done.

29034 **\$9.99**

Carbon Boss™ – AR15. This is the most comprehensive carbon removal multi-tool ever built. Extremely versatile, it has 12 precision surfaces to clean the most critical parts of your bolt, bolt carrier, cam pin, and firing pin. It's the enemy of your AR15's worst enemy.

29039 **\$29.99**

The unique Accu-Grip™ Picks and Brushes get the job done, feel good in your hand, and won't scratch your firearm. Eight profiles dig gunk out of the places that even the sun don't shine. They're tough on the crud but tender on the metal. A better designed, better built detailing kit that just might make your dentist jealous.

29036 **\$9.99**

The AR15 Brush Combo™ contains the critical components you need to keep your AR15 chamber and bore carbon free. It contains a star chamber brush and star chamber mop for cleaning inside the hard to reach star chamber. Star chamber pads help collect leftover carbon while applying the perfect amount of oil or solvent. The .223/.56mm bore brush scrubs baked on carbon from lands and grooves.

29037 **\$9.99**

There's no easy way to scrape carbon out of the star chamber of an AR15 unless you're a surgeon. That's why you use a star chamber brush to loosen the carbon then remove it with these star chamber cleaning pads. Done deal. Now get back to shooting. 20 wool chamber pads per package.

29038 **\$12.99**

Real Avid Smart TORQ™

The most precise and technically advanced torque driver for guns. Specifically developed for optics mounting and gun builds. Discrete inch-pound-increment settings provide spot-on torque adjustments. Comfortable ergonomic grip with Force Assist makes tool manipulation a breeze. The functionally intuitive torque setting with visual, tactile and audible feedback provides confident assurance. To get you started, Smart Torq comes with 12 of the most commonly used gun bits. Never over-torque a scope ring again!

21776 \$79.99

Swab-its

No s#!+, there I was...in my office, cleaning my revolver when the boss walks in with that "whiskey-tango-foxtrot" look on his face. "Hi," I said (*thinking fast*), "I'm trying out these Bore-tips before I write the **Blue Press** copy for them. They work GREAT!" The **Bore-tips Swabs** REALLY DO work. What you can't see under the foam is a plastic jag sized for a tight bore fit which provides for the uniform application of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reusable.

Slip 2000 Products

725 Gun Cleaner Degreaser

should truly be called Super Degreaser. This water-based cleaner will cut through the toughest cosmoline, carbon, grease and grime! Its super strength allows it to degum and degunk the dirtiest of gun parts when sprayed on or used in parts washers or solvent tanks! **NOTE:** To help prevent rusting, users must apply a gun lubricant immediately after cleaning to disperse any moisture in parts.

16 Oz. 19237 \$21.99

Slip 2000 Carbon Killer

provides you with a safe, effective way to clean carbon, lead and plastic wad fouling. Unlike other gun cleaners, this product is non-flammable, non-hazardous and biodegradable. Designed for soaking metal parts with baked on carbon, Carbon Killer dissolves carbon and lead on contact.

NOTE: Carbon Killer is for cleaning internal metal gun parts with baked on carbon by soaking them. It is an aggressive cleaner and should not be used to clean the outside of your gun. It can damage and even remove some finishes.

16 Oz. 19234 \$21.99

Slip 2000 **Extreme Weapons Lubricant** (EWL) was designed for use on chain guns and machine guns like the MP5 and the 249SAW. It contains a proprietary Anti-wear agent that reduces friction and wear by 90-95 percent. It is an excellent CLP and is able to clean, lubricate and protect.

4 Oz. 11644 \$18.99

Slip 2000 **EWL30** has the same properties as EWL, except it is a lot thicker. It contains a proprietary thickening agent that makes this lubricant consistency like a 30-weight motor oil. It was designed for those who want or need a lubricant that will not migrate at all and don't want to use a thick grease.

4 Oz. 11645 \$21.99

Slip 2000's **Extreme Cleaning System** contains 2 Oz. bottles of: Carbon Killer Bore Cleaner, 725 Gun Cleaner Degreaser, and EWL Extreme Weapons Lubricant.

11652 \$25.99

Slip 2000's **AR Cleaning System** contains a 7 Oz. bottle of Carbon Killer Bore Cleaner, a 15cc syringe of Extreme Weapons Grease, and a 1 Oz. bottle of EWL Extreme Weapons Lubricant.

11676 \$19.99

Slip 2000 **Copper Cutter** is specially formulated to remove copper, lead, powder residue and plastic wad fouling from bore surfaces with little scrubbing! **NOTE:** It is a water based, ammonia enhanced product and will remove all lubrication or oil protection, so always re-lube all parts cleaned.

4 Oz. 11646 \$11.99

Each Slip 2000 **Gun Wipe** packet contains one 5" x 8" wipe treated with Slip 2000 Synthetic Gun Lube. Perfect for wiping your guns down after a day on the range or while out on a hunt. Apply to all metal surfaces. Great for light carbon cleaning. Safe for all firearm stocks and grips.

20 Pack 11674 \$14.99

TW-25B is the choice of leading firearms manufacturers, armorers, pro shooters and gun enthusiasts, and is recognized as the world's best all-purpose weapons lubricant/protectant. It is now widely specified by the U.S. military for their most critical performance weapons systems. Environmentally safe, non-carcinogenic, non-ozone-depleting.

0.5 Oz. Syringe	15732	\$14.99
1.5 Ounces	15731	18.99

Brian Enos' Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it. Slide-Glide Standard is for use in warm weather (F60°+), Lite is a thinner viscosity for lower temperatures (F30°+).

Slide-Glide Standard	15571	\$7.99
Slide-Glide Lite	15572	7.99

Sweet's 7.62

Sweet's Australian 7.62 Solvent easily removes powder residue and stubborn copper fouling. It's harmless to steel, a non-acid formula with five percent ammonia.

Real Avid AR15 Bolt Catch Pin Starter & Pin Punch Set

Two punches, one simple solution to the difficult-to-access bolt catch retaining pin. The orientation of the pin, close proximity to the lower receiver, distance required to safely punch a pin, and the difficulty in getting the pin started makes it a real pain with standard punches. Our simple solution is specially designed to fit flush against the receiver without damaging it, and is long enough to reach the pin. It features a roll pin punch for removing pins and a magnetized roll pin starter punch that eliminates the need for a third hand. Smart, simple, frustration free.

Justified Defensive Concepts, LLC Multi-Use Training Target

Shooters who compete in several disciplines can now use one target to practice USPSA, IDPA and ICORE or train with various dot-torture and bullseye arrays. The National Target Company, Inc. is offering the Justified Defensive Concepts, LLC Multi-Use Training Target. Sized 22.5" x 35" on lightweight paper, this target's versatility is almost unparalleled for handgun, pistol-caliber carbine and rifle training or practice. It comes in a package of 50 targets and just might be the ONLY target you'll need for your shooting session.

11713 \$19.99

Shoot Out Targets

The Alpha Target is Shoot Out Targets' Patent Pending instant-reaction target system that can be reused again and again to improve your marksmanship. All Shoot Out Targets are made of durable cardboard that has been tested to withstand 1000-plus shots. Unlike clay pigeons that can only be used once, the **Foam Medallions** are durable and able to self heal for longer-lasting use, allowing for up to 40-plus shots per medallion. Each foam medallion is 3" in diameter and 1/2" thick. With the easy-to-see foam medallions you will get an instant kinetic reaction with every hit. Shoot Out Targets are proudly made in the USA, reusable for hours of fun and can be used with all-caliber firearms and airguns. The target stands 43" tall and 22" wide when assembled.

THE MYTH of the "GLOCK Storm"

By Duane Thomas

Several times recently I've read the same statement from different writers, in pretty much these words: "When the GLOCK was first imported into the United States in 1986, it hit American shores like a storm." In other words, the GLOCK was hugely popular right off the bat. Obviously, these people were not there at the time. So, one uninformed person says that, then it gets picked up and mindlessly repeated by others. Take it from someone who actually was there: This is false. In this article, we'll lay that particular myth to rest.

The GLOCK 17 was introduced in 1982, then accepted as the Austrian military service pistol in 1983. It took a while for the GLOCK to be approved for importation into the United States. The first GLOCKS, by serial number, were imported in January 1986.

The Gen1 GLOCK 17, which was what we got in 1986, was not a popular gun. There were fewer Gen1s made

than any other GLOCK gen. Thus, they have achieved a certain mystique among people who've never owned, fired, handled, or even seen one. I have heard it said, "The Gen1 GLOCK 17 was made back when GLOCKS were built the way they should be."

Um, no. I've had three of these things over the years, and I can tell you, with absolutely no worries of being wrong, they're pretty crude, especially in the area of the frame molding. By 1986, injection molded polymer was a mature technology, but GLOCK frames lagged. If you ever get the chance to examine a Gen1 GLOCK 17, check out that mold mark all the way around the frame. Also check out the "texturing" on the front of the trigger guard that literally looks like a wadded-up piece of used chewing gum.

To start with, the GLOCK's styling was jarring to traditionalist American sensibilities. Its lack of a hammer, and a thumb safety, and the gun's overall shape, its

spongy trigger pulls, all reminded people of a kid's water pistol. The joke at the time was, "Where do you put the water in?"

A lot of people today aren't aware of it, because we didn't have the Internet back then to set memories in stone, but shortly after Gen1 GLOCK 17s began being imported, they had a major recall – excuse me, "voluntary product improvement" – to revamp the trigger system, after a small number of examples were found to slamfire while being loaded, or double, or even triple, while being fired. This did the overall American impression of the gun no good.

GLOCK made a number of cosmetic changes to the design and in 1988 introduced Gen2. These were much more "finished" appearing guns, and were, as I like to say, "when the GLOCK started looking like a real gun." Popularity picked up but it still wasn't setting the country on fire.

In addition to updating the GLOCK 17 with Gen2, at the same time GLOCK introduced a new gun: the GLOCK 19. (Other than a few prototypes made by literally cutting up and re-welding Gen1 GLOCK 17s, there is no such thing as a Gen1 GLOCK 19.) In essence this was a more-compact GLOCK 17, intended for concealed carry. It might be hard to believe today, when the GLOCK 19 has become the *de facto* standard-issue American concealed carry handgun, but the G19 was not immediately popular either.

In 1990, the .40 S&W cartridge was introduced. This was a big deal. The .40 S&W made every other service autopistol cartridge obsolete, gun magazines screamed. GLOCK actually stole a march on Smith & Wesson, which had developed the cartridge in conjunction with Winchester, and had their .40-chambered guns out first: the service-sized GLOCK 22 (basically a GLOCK 17 9mm in .40) and the compact GLOCK 23 (the .40 equivalent to a 9mm GLOCK 19).

In short order, the GLOCK 22 became the most-issued police sidearm in America. Police and/or military weapons tend to become popular among the ordinary citizenry, as well. While most people weren't up for carrying the full-sized GLOCK 22 concealed, the compact GLOCK 23, in short order, became the cool-guy gun among that very interesting subset of highly trained, highly skilled, concealed gun carriers.

I did not jump on that particular bandwagon, even when a lot of people in my social, and training, circle did. Not to say I never carried a GLOCK 23. I did, briefly. But the carry GLOCK that just blatantly made the most sense to me at the time was the GLOCK 19, basically the same gun as the GLOCK 23 .40, but in 9mm.

Recently, in the Comments section to one of my YouTube videos, someone referred to me as "one of the GLOCK 19's earliest and most vocal champions." I suppose I was. I was carrying a GLOCK 19, and writing about that fact, before the GLOCK 19 was cool.

I once wrote an article on what I call "middleweight" handguns. A more accurately descriptive term might be "cut-down service pistols," since most middleweights are versions of a previously existent, full-sized gun, with the slide, barrel, butt and magazine all trimmed slightly for greater compactness. Therefore, middleweights provide most of the handling qualities, and most of the capacity, of full-sized service pistols while being easier to conceal. The GLOCK 19 always struck me as quite possibly the ultimate expression of that concept.

I once attended an Instructor Development Training Day at InSights Training Center, here in Washington state where I reside – not that I was ever an instructor at InSights; headman Greg Hamilton just let me attend the training. There were 13 people at that class, including Greg and me. 12 of them were carrying GLOCK 23s. I was the one free thinker carrying a GLOCK 19. None of the other trainees had ever fired a G19. They all wanted to shoot mine. So, I let them. The common response, over and over again, was, "Oh wow, that is NICE. The recoil is so much lighter than my 23."

Yes, it's true, folks: I was ahead of the wave. And I've got the old articles to prove it.

When the .40 S&W cartridge was first introduced, I think a lot of people expected it to be like the .45 ACP: low-pressure, reasonably heavily-recoiling, but still easily controllable. It's not. For experienced, highly trained and skilled shooters, the .40 S&W was no big deal. The problem was this cartridge wound up in the hands of a lot of people who were neither highly trained nor highly skilled.

The .40 S&W combines a peak pressure level equivalent to the 9mm Parabellum, with a much faster pressure spike, and bullet weights equivalent to many .45 ACP loads. Thus, it's a much nastier cartridge to fire than either the 9mm or .45.

In 9mm Parabellum we have recoil that's fairly snappy, but it's light, so it's still controllable. One very nice thing about 9mm Parabellum, even the most rompin' stompin' +P or +P+ load we can stuff into the gun is, in the overall scheme of things, still easily controllable. Granted a reasonably sized gun, in any event.

In .45 ACP, we can go +P and get the recoil level up to the point it becomes abusive. But the truth is, that's not what the vast majority of .45 ACP fans carry, they go standard pressure. With standard-pressure .45 ACP we have recoil that's fairly heavy, but it's slow, so it's still controllable.

With .40 S&W, by contrast, we have recoil that's snappy and heavy, thus we get the worst of both worlds.

Police departments, and other law enforcement agencies, adopting the .40 S&W saw qualification scores drop, compared to the same officers/agents armed with more lightly recoiling guns. Also, the .40 S&W swiftly developed a reputation as a "gun eater" much harder on

guns over the long-term than when the same designs were chambered in 9mm. Jim Cirillo commented he thought the .40 S&W should be chambered in large-frame guns only. I agree.

While the cartridge was, for a time, very popular among law enforcement, it never really caught on among ordinary gun carriers. The .40 S&W was conceptualized as a compromise, the idea being we could fit a cartridge with a numerical designation beginning with "4" into a doublestack magazine, and thence into a gun the same size as a 9mm. Thus, greater magazine capacity than a .45, with theoretically greater stopping power than a 9mm in a same-size gun, with a same-size grip.

It was a nice theory. Yes, yes, that extra 45/one-THOUSANDTHS of an inch bore diameter was going to make all the difference. In reality, the results of street shootings have shown the 9mm works just as well as .40 or .45. So why not go 9mm? A lot of people who didn't have to carry a .40 on the job because that's what they were issued, said to themselves, "If I want a gun that holds a lot of rounds, I'll get a 9mm. If I want a big bore that's easy to control, I'll get a .45." The .40 S&W, offering neither the capacity of 9mm nor the gentle big bore manners of .45, just couldn't cut it among people who had a choice.

Over time, the .40 S&W fell out of favor, even among law enforcement, which really was the only area in which it was ever a success. Police departments, federal agencies, all the people who used to tote .40s, have now largely reequipped with the same guns in 9mm. The GLOCK 22s and 23s have, over time, morphed into GLOCK 17s and 19s.

SUMMARY

So, no, when the GLOCK was first imported into the United States, it did not "hit American shores like a storm." There was a fairly long time period when the American reaction could be more accurately described as a yawn. The crude construction methods applied to early GLOCKS, the design's unconventional styling, the trigger system recall, all conspired together to retard the GLOCK's popularity among American shooters. It took about four years, from 1986 to 1990, for the storm to build, I would say.

But time goes by, eventually the cream rises to the top. The .40 S&W cartridge was a very important part of the GLOCK story. Even if, when things shook out, its greatest effect was to act as a sort of gateway drug, leading immense numbers of people to eventually figure out the same guns in 9mm work just a whole lot better. 

NGEN CARBIDE
Die Sets for Handgun Cartridges

"The first significant breakthrough in carbide dies in over 40 years"

REDDING
USA

Still Proudly Made in America

1089 Starr Road, Cortland, NY 13045 • (607) 753-3331 Fax (607) 756-8445 • www.redding-reloading.com

The advertisement features a black die set box labeled "REDDING NGEN CARBIDE" with "DESCRIPTION 45 ACP/AR # 88189". The box has checkboxes for "SIZING DIE" and "COMPLETE SET", with the latter being checked. Several carbide dies and brass bullet casing are displayed around the box. A small logo is visible in the bottom right corner of the ad.

Dillon Teams Up With TechwearUSA

In response to everyone who has been asking us for Dillon Precision shooting jerseys, we've teamed up with **TechwearUSA** – Your Official Provider of Custom USPSA Gear!

The TechwearUSA AirFlex (\$70) is the ultimate performance layer and their lightest weight jersey. The TechwearUSA Premier Polo (\$95) is made of proprietary Techstatic fabric and is the ultimate competition polo. From its classic cut, added length to make sure it stays tucked in, fold-over collar, zipper front and side panels made from extra breathable mesh, every detail of this garment has been thought through to help you look, feel and perform at your best.

To order TechwearUSA's Dillon Precision men's and women's shooting jerseys, go to techwearusa.com. By the way, the "USA" in TechwearUSA signifies that their apparel is MADE HERE!

GARRISON

Featuring forged materials and heirloom-quality construction, the Garrison 1911 combines modern materials and design with a heritage spanning back more than a century. Available with classic hot salt blued carbon steel or rust-resistant stainless steel construction, the Garrison is a rock-solid 1911 that gives you a host of modern upgrades along with the strength to provide a lifetime of service.

Scout Scope Mounts

Sorry, the optic pictured here is NOT included with the Scout Scope Mount.

Scout Scope Mounts provide an extremely stable optics base for your SAK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle	25374	\$79.99
Scout Scope Mount for SKS Rifle	25373	78.99

BERRY'S

Like pretty much everything from Berry's Manufacturing, this 9" x 12" x 10" deep stackable utility box is made in America and covered by a lifetime warranty. The box is designed to stack and is great for storing bulky items. If your gun room/garage looks anything like ours, these will help you get organized. So, whether you're looking to store shooting accessories, ammo components, or car parts (we have more than our share of all of the above) these boxes are ideal. The best part is that they're transparent, so when you fill them, you don't have to open the WHOLE stack to find what you're looking for.

Stackable Utility Box 40194 \$20.99

Tri-Can Triple Ammo Can

The Tri-Can will change your life! The perfect organizational tool to fit any of your needs.

The tough injection molded plastic base and lid, rubber seal gasket, and cam-lock latch keeps your contents safe.

Comes with a strong handle for those who are on the go!

The Tri-Can is made up of three individual cans and can be customized with up to three individual cells.

The individual can dimensions are 9.25" L x 3.125" Base W x 3.125" Top W x 2.5" H

John Marshall on Classic Firearms: The Colt Model 1860 Army .44 Revolver

It was the most widely used revolver of the American Civil War. The percussion-capped six shot Colt Model 1860 Army was favored not only by Union soldiers, but also by the Confederates when they could get pre-war guns, find them on the battlefields or get smuggled examples. Preceded by Colt Model 1851 Navy .36 caliber handguns, the newer Model 1860s used .44 caliber bullets, giving them noticeably more clout. This improved gun had a larger handgrip to help offset its stouter recoil and had much sleeker lines. It was lighter than previous large-caliber sidearms and operated smoothly and reliably. It was considered by many to be the pinnacle of revolver development until the wide use of metallic cartridge firearms.

Until the Model 1860 came to be, previous Colt revolvers in .44 caliber were large-sized “horse pistols” that had to use holsters designed to be strapped to horses; they were just too heavy to be worn comfortably on the person. These stemmed from the original “Walker Colts” that were made to the specifications of Army (and Texas Ranger) captain Samuel Walker at the time of the Mexican War (1846–1848). What was needed was a somewhat smaller revolver that could fire .44 projectiles and still be carried handily when on foot. As a side note, in those days “.44” referred to the bore diameter before rifling. After rifling, the bore diameter was actually .452 – .454.

The Model 1860 used an ingenious method to cram a larger .44 caliber cylinder into a frame originally designed for .36 caliber. The .44 cylinder was rebated, having the rear 3/4” of it machined to a smaller diameter which was the same width as those used in the .36 caliber guns. The front of the cylinder recess in the frame was deepened to accommodate the larger portion of the .44 cylinder. Thus, the larger cylinder could be rotated with the exact same mechanism previously used on the smaller .36 guns. The cylinder chambers were bored to be conical to provide more metal around them. It is not known if Samuel Colt had a hand in these work arounds, as he was in poor health and subsequently died in 1862.

An obvious feature of the Model 1860 was its graceful and streamlined appearance. The blocky shape of the rear of the octagonal barrel on the Model 1851 was smoothed and the barrel of the Model 1860 became rounded. The larger grip frame of the Model 1860 (used for the first and only time at Colt’s) was 1/4” longer than that of the Model 1851. The barrel and its integral rear block were melded smoothly and attractively. While

some early-production guns had 7.5" barrels, most measured a slightly longer eight inches.

Some early guns had flutes on the cylinder between the chambers. This was a weight-saving attempt that was quickly abandoned. There was only a moderate decrease in the weight of the gun once this was done, and the additional manufacturing expense was not warranted for wartime manufacture. Non-fluted cylinders had a naval engagement scene lightly roll-engraved around them, like the Model 1851. Guns made for the military had screw lugs on the side of the frame in order to mount a detachable shoulder stock for cavalry use. Some stocks were hollow inside to be used as canteens. Despite the ability of these guns to use a stock, the stocks were seldom bought and used.

In final form, the "silver spring steel"-framed Model 1860 weighed in at 2 pounds, 11 ounces. The Bessemer steel process which was invented in the 1850s made a lighter weight but still quite strong arm possible. The gun measured 14" long and had an overall height of 5.25". It could use paper cartridges in which a conical bullet was the forward portion, and the rear was a nitrated combustible paper wrapping containing the black powder charge. When these paper cartridges were used, the six cylinder chambers could be charged with them from the front, then rammed into place with the integral levered rammer placed beneath the barrel. In the ramming process, the slightly oversized bullets were sheared or swaged to a tight fit in the chamber. Once small primer caps charged with fulminate of mercury were pressed on the priming nipples at the rear of the cylinder, the gun was ready to fire. The rear sight was a simple notch in the tip of the hammer which came into view when the hammer was cocked. The front sight was made of brass to make it more visible in aiming.

The muzzle velocity of the bullets ranged from roughly 600 to 1000 feet per second, using a nominal powder charge of 30 grains of black powder. The approximate

maximum range of the gun was about 75 yards, much depending on the skill of the shooter and the accuracy of the particular firearm. "Hail Mary" shots out to 100 yards were possible but not probable.

Just before the Civil War, over 2,000 were sold to dealers in the South and were later prized by Confederate soldiers. In May 1861, the U.S. Navy ordered 900, all of which had fluted cylinders. These were issued to sailors manning Union ships which enforced the Gulf and Atlantic military equipment blockades. The Army also started ordering them that May and 127,157 were delivered until a disastrous fire destroyed Colt's Hartford factory on February 5, 1864.

Although the factory was quickly rebuilt, Colt's could no longer contribute arms through the rest of the Civil War, which ended in 1865.

Production of these guns continued post war, and many were extensively used on the western frontier along with surplus wartime guns. The Texas Rangers made good use of them, and rebuilt Model 1860s were issued to the 9th and 10th cavalry regiments (buffalo soldiers). During the Civil War, the cost of the gun was about \$20 per revolver, a considerable expense in those days. This brought some criticism at the time, and consequently the price from 1865 on was lowered to \$14.50. Overall, about 200,000 of the Model 1860s were

produced from 1860 to 1873, when the Colt Single Action Army revolver was introduced.

Today, Civil War weapons are very much in demand, and the most famous revolvers of that period are no exception. Current prices for even "beater grade" Model 1860 examples are currently running around \$2,000. When they are found in pristine original condition with full bluing and little to no wear, well – hold on to your wallet. I've seen such guns go at auction for around \$16,000, and cased and engraved examples can bring astronomical sums. These guns are *bona fide* classics, and very rightfully so.

During the Civil War,
the cost of the gun was
about \$20 per revolver, a
considerable expense in
those days. This brought
some criticism at the time,
and consequently the
price from 1865 on was
lowered to \$14.50.

SAFARILAND®

ENHANCED LIBERATOR HP 2.0

Next Generation Multi-Mode Hearing Protection!

The Liberator® HP headset is the next generation in electronic hearing protection, offering crisp, clear audio in a durable, scratch-resistant, slim earcup.

**26dB
NRR**

- Three distinct hearing protection modes:
 - 1. ENHANCED MODE** – Blocks dangerous impulse noise, while enhancing nearby speech and audio.
 - 2. MOVE MODE** – Blocks all external noise.
 - 3. CLARITY MODE** – Blocks all external noise, while enhancing nearby speech and audio.
- Slim earcup design layered with sound barrier technology.
- High-definition speakers with enhanced electronics.
- Speed-change battery compartment works with either two AAA batteries or one CR123 battery.
- 160-300 hour run time (mode dependent).
- Easily converts to behind-the-head or helmet-mount suspension (available separately from Safariland).
