**ATTENTION DILLON CUSTOMERS:** Because of changes to California's Proposition 65 that took effect on August 30, 2018, companies doing business in California are mandated to provide warnings on products that may expose Californians to any one or more of a list of approximately 900 chemicals, including Lead, which are "known to the State of California to cause cancer, birth defects or other reproductive harm." The new regulation states that a warning must be "provided in the catalog in a manner that clearly associates it with the item being purchased." Though we have no reason to believe our products could cause harm when used as intended, we now include the appropriate Proposition 65 warnings on some of our products to meet the California "safe harbor" requirements.

# Dillon's Bill of Rights for Reloaders

**All of Dillon Precision's customers have certain inalienable rights when they buy a reloading product:**

- 1. Right of Quality** – YOU THE CUSTOMER have the right to expect a well-designed product, manufactured with quality materials and workmanship that does what the seller claims it will do.
- 2. Right to Test and Send-Back** – YOU THE CUSTOMER should have the right to test the product on your own reloading bench for at least 30 days, and if it does not live up to your expectations, send it back for a full refund.
- 3. Right of Service** – YOU THE CUSTOMER have the right to free, friendly, expert service and technical advice available through a toll-free phone number. This service should include prompt replacement of broken or bad parts – free of charge.
- 4. Right of Warranty** – YOU THE CUSTOMER have the right to a lifetime warranty on any non-commercial-grade reloading product you purchase. *Unfortunately, we can't offer this warranty on textile products and electrical or electronic components.*
- 5. Right to be Heard** – YOU THE CUSTOMER should have the right to speak to someone of authority anytime you can't get satisfaction through normal channels. If our sales representatives aren't able to help you, our supervisors have a mandate to take customer-satisfaction issues all the way to the owner of the company if necessary.

**Editor's Note:** The Bill of Rights for Reloaders is Dillon Precision Products' customer-satisfaction policy. It remains very much unchanged from the day the company was founded. The disclaimer about textile products and electrical or electronic components reflects the reality of how those products are produced in today's world. Ultimately, our founder recognized that satisfied customers are our best advertising, and the only thing that differentiated his wcompany from all the others at the time was the warranty and customer service he offered.

We constantly strive to live up to his standards.  
Please let us know if we're not succeeding.

# CP 2000<sup>^</sup>

## Dillon's DEDICATED Case-Processing Machine!

- Made in the USA
- Eccentric Roller Bearing Drive System
- Smoother Operation, Less Effort
- Higher Throughput, Lower Cost Per Case
- Heavier Frame for Greater Rigidity
- Seven Threaded Stations for More Flexibility
- Upgraded Primer Pocket Swager
- Primer Pocket Swage Available in Two Stations
- User-Replaceable Swage Rod Tip
- Reinforced Toolhead Bolt & Washer
- Improved Shellplate Indexing System
- Processing Speed up to 2000 Cases Per Hour

Designed to complement our RL 1100 and Super 1050, the CP 2000 offers higher speed, greater versatility and added case processing capability...all at a much lower cost than dedicating a RELOADING machine to prep brass! If you're loading mass quantities of ammo, the CP 2000 will make your task MUCH easier.

**\$1799<sup>00\*</sup>**

**CP 2000 Case Processor 66200**

Case Trimmer, Trim Die, Short Trim Die Toolhead, Universal Decapping Die and Second Back-Up Expander Die Sold Separately

*Total price as pictured with optional accessories: \$3043.00*

RT 1500 Case Trimmer	62164	\$425.00
.300 Blk Carbide Trim Die	62140	\$220.00
Short Trim Die Toolhead	66026	\$280.00
.300 Blk Caliber Conversion	66210	\$180.00
.300 Blk Expander Back Up	62372	\$55.00
Universal Decapping Die	22127	\$36.00
Small Rifle Casefeed Plate	21074	\$48.00

# Rapid Trim 1500 Case Trimmer<sup>^</sup>

Dillon's  
RT 1500  
shown  
installed  
on an  
XL 650.

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1500 is equipped with a quick-disconnect

power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer **62164** is **\$425.00**. (Available only in 110 volt 60 hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, **13141**, are **\$25.00** each. Upper lock rings, **13559**, are **\$9.00** each.

## MILITARY BRASS?

**Eliminate the "Grunt Work" with  
Dillon's Super Swage 600**

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

**20095

# Case Preparation Equipment

## CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is one of the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour. Not only is our capacity greater than most, but our motor is also larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine! The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

## Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media. We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners. The solution was an injection molded reversible part. Simple, and it works great. Our device is large, 10" x 14",

**Rapid Polish 290** is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

*Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!*

*Rapid Polish 290*

8 oz. bottle.	<b>13804</b>	<b>\$9.99</b>
Case (20 pc.)	<b>20255</b>	<b>149.99</b>

## Vibratory Case Cleaners Case/Media Separators

CM-2000 Case/Media Separator ^	<b>20675</b>	<b>\$110.00</b>
CM-500 Case/Media Separator ^	<b>21045</b>	<b>\$80.00</b>

and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench. It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

## Limited Work Space?

Dillon created the CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit. Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

CV-2001 ^, US 110v	<b>20493</b>	<b>\$250.00</b>
CV-750 ^, US 110v	<b>19455</b>	<b>190.00</b>

Dillon's **D.C.L.** non-aerosol case lube is easy to use. Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

8 oz. bottle	<b>13733</b>	<b>\$15.99</b>

# CHOOSING THE RIGHT RED DOT

By John Kleespies

"Which red dot sight is the best?" is one of the most common questions I get from people, whether it's at a match or a backyard BBQ. It always makes me cringe a little. I tend to counter their question with another one, the same as when I'm asked to identify the best gun. I ask them, "What do you plan to use it for?"

This is typically followed by a blank stare.

"Competition?" I'll prod. "Maybe home defense...or just looking cool?"

And...I'll continue to get a blank stare.

So, I'd like to present a guide on how to choose the best red dot for your personal needs. I won't bother to expound upon why red dots are awesome – that's already been covered by others more eloquent than me – but rather the nuts and bolts that determine why one dot may work perfectly for Jack, but not so much for Jill.

Hopefully, in doing so, I may help you to organize your thoughts when it comes time to decide which red dot you'll purchase when that magic day comes, so you can make your decision based on the product's features, rather than its hype.

Here's the worksheet that I ask myself when I'm picking a dot for a new gun:

1. How much money am I willing to spend?
  2. What is the urgency with which it will be used?
  3. What's the breadth of brightness that it will need to cover?
  4. How much of a beating must it be able to withstand?
- Let's walk through the process with a few examples:  
If I'm building a rimfire rifle for teaching juniors how to

shoot, I'll (1) want to keep the price low, (2) understand that the kids will have all the time in the world to aim at their tin cans, (3) while comfortably sitting at a range bench under a shade cover, and (4) the gun will mostly reside in a padded bag when not being shot. In this scenario, I might opt for the venerable Bushnell TRS-25. This sight may have a small window and a dim dot that resembles frozen spit, but that's fine because nobody's life or prize money will depend upon it. The Bushnell's hundred-ish dollar price tag isn't painful, and its tube-style body can survive the inevitable youngster who'll prop the rifle against a table and walk away just long enough for it to fall over and land on its glass.

Now, scenario two: I'm in need of a Carry Optic pistol to be used when I hear a bump in the night. In this case, (1) I'll figure out a way to pay for the best dot there is because it will be used to protect my family, (2) it will need to be fast aiming to win in a life-on-the-line situation, (3) it will need to dial down enough to avoid night-blinding me in darkness while also being able to dial up enough for daylight use, and (4) it will need to continue operating, even if I literally have to beat the dot against a door jamb in an effort to perform an emergency, one-handed slide manipulation. Hence, a Trijicon RMR sits atop my very own Carry Optic GLOCK... even though the doggone dot costs more than a brand-new GLOCK! But is an RMR worth that extra couple hundred dollars? For the knowledge that my family is protected by one of the best pieces of equipment on the planet, you better believe it is...at least to me.

Finally, there's scenario three, where I'm crafting an

open pistol to be used in practical, speed-based shooting competitions. Here, I'm willing to (1) spend enough money to (2) be the fastest guy at the match which will be shot exclusively in (3) full sunlight from (4) the relative safety of a shooting bay. My choice here is a C-More RTS2 with its large and clear glass, bright dot, and ultra-thin frame that blocks virtually none of my vision so that I can crank out super-speedy transitions from target to target.

Of course, I have to be careful that I don't accidentally whap that RTS2's lens against a barricade while runnin'n'gunnin', lest I want to go home with a \$400+ paperweight....

On this note, the thickness of the frame that surrounds a dot's lens is a vitally important topic that is rarely discussed. A thick frame will provide greater survivability against impact, which is important if your job description includes things like serving search warrants and wrestling bad guys to the ground. Unfortunately, the price of this increased protection will be a somewhat obstructed field of view. On some dots, this blocked field of view is barely noticeable, while on others it is quite distracting.

In my examples above, a TRS-25's frame thickness is so pronounced, it might as well be considered a part of the aiming process: aim at the glowing thing in the middle of the great big frame circle! This means that the TRS-25 is slow to bring on target, as I may have trouble finding the bullseye that's hiding behind the battery cover. On the other hand, when shooting fast, the minimal frame on a C-More all but disappears, creating the visual effect of the dot magically hovering above the gun. This is further aided by the RTS2's relatively large

diameter window. Hence, if I'm taking my equipment to the World Speed Shooting Championships, I'm choosing the RTS2...but it will be complete overkill if all I'm doing is punching paper.

The RMR falls somewhere in the middle of the two examples above. While the RMR doesn't have a terribly thick frame compared to tube-style sights, the Trijicon's frame thickness is significant enough that you will rarely see an RMR in speed-shooting competitions. That said, if you have any doubt as to the functionality of the Triji's stature, I invite you to hop on over to YouTube and watch Aaron Cowan at Sage Dynamics as he performs a years-long 20,000 round torture test on an RMR. If Mr. Cowan's exceptional work doesn't convince you to put an RMR on your defensive firearm, then I don't know what else to tell ya!

Another topic worthy of special consideration is dot size... because this seems to be the area where all the "experts" feel the need to speak in absolutes. I've heard "only choose a small dot because you cannot be accurate with a big dot" so many times, it makes me want to tear my hair out. The theory is that a large dot (read: anything larger than 4moa) is so big, it will cover the target and not allow for precise bullet placement. Accompanying this article is a photo of three shots that I fired at 20 yards when verifying my zero prior to a championship steel match – with an 8moa C-More RTS2. No, Mr. Sniper McBullseye, that group wasn't fired at 100 yards...but if you're planning on pinpoint accuracy at distance with a dot, well...I hate to tell ya, but you chose the wrong kind of sight. Go buy yourself a variable scope with a 1x option instead.

Personally, the smallest-sized dot that I run is 6moa, because a big and bright dot allows me to aim intuitively. If I want to go super precise, it's a simple matter to lower the brightness until the dot becomes transparent, and then I shoot through the dot. On the flip side, I've spoken to two exceptional shooters who use a 1moa EOTECH in competition, and their operating procedure is simply the mirror image of mine – for speed shooting, they crank their dot up to its highest power so that the reticle “blooms out” to appear larger than 1moa. If they want precision, then they set the brightness to a normal level and commence punching bullseyes.

Which brings me to my last area of note: dot brightness.

Unfortunately, I've found that determining a red dot's brightness can only be judged firsthand – if you base your decisions on marketing hype, then every sight possesses a perfectly crisp reticle that shines as bright as the sun.

Alas, marketing is not always truthful, so ALWAYS handle a dot before purchasing it.

For me, the TRS-25 is a starter sight, nothing more. No, it doesn't get terribly bright, and the window is kinda small when you're actually looking through it, but it's good enough for learning the fundamentals on a rimfire, and it's reliable enough to bang out thousands of rounds without losing zero. I guarantee that you won't be able to say that about a \$29.99 Walmart special. Start with the Bushnell, and when you're ready to move into the big leagues, then get out your wallet.

The RTS2 costs four times as much as the TRS-25, but it has intensity to spare, even on the brightest day, and its big window with super clear glass is a pleasure to behold. Unfortunately, though, the RTS2's lowest setting is still so bright, I find that it's uncomfortable in low-light conditions, and nearly unusable after nightfall. So, while it's fantastic on a game gun, its low-light capabilities

crossed the RTS2 off my Carry Optic list pretty early on.

And the RMR? The manual brightness settings on that thing go from you-need-night-vision-goggles-to-see-it all the way up to glaring. Even better, it has a light sensor that will auto-adjust its brightness based on the ambient conditions of your surroundings. In other words, if I hear

a bump in the night and sprint from my fully lit home into the darkness outside, the dot will auto-adjust without my ever having to take my hands off the firearm's controls – a very practical feature when the distraction caused by stopping and adjusting your dot's brightness may mean the difference between life and death against an opposing, armed foe. All of this is also why the RMR costs \$500 without a mount...and why it would be way too much awesomeness for that junior rimfire build that I envisioned at the start of this article.

If I had to close with one repeated piece of advice, it would be to handle a dot before purchasing it. Go to a shooting competition – I guarantee that you'll find almost every dot under the sun, and plenty of guys will let you look downrange while blathering out a ten-minute lecture on his particular dot's pluses and minuses. If you can't go to a match, then visit a brick-and-mortar store and ask the guy at the display case to pop a battery in all of his offerings and let you peek through them. That's the only way you'll be able to see how bright any given dot can (or cannot) be adjusted, or how big (or tiny) the reticle actually is compared to the one sitting next to it, or how obtrusive the frame really sizes out relative to the professionally staged photo you saw in that super cool magazine ad.

But, most of all...just get one! Red dots are fantastic pieces of equipment that will not only up your accuracy and speed, but they'll also blow your range day's fun-factor through the roof.

**Three shots the author fired at 20 yards when verifying his zero prior to a championship steel match – with an 8moa C-More RTS2.**

**“A big and bright dot allows me to aim intuitively. If I want to go super precise, it's a simple matter to lower the brightness until the dot becomes transparent, and then I shoot through the dot.”**

# Dillon Automation's DA 3000

## For Dillon Precision's CP 2000 and RL 1100

Introducing the new Dillon Autodrive 3000!

- Fully automates the Dillon Precision CP 2000 and RL 1100.
- Case Preparation rate up to 3000 rounds per hour!
- Reloading rate up to 2000 rounds per hour!
- DA 3000 easily installs on your Reloading and Case Prep machines.
- Simply press the "Start" button – no more manual cycling of the machine.
- Adjustable Cycle Rate and Dwell.
- Dillon custom-built Industrial Controller.
- Integrated safety controls and shield.
- Field-tested and proven patented design.
- One-year warranty on the DA 3000.
- Maintains your Dillon-Factory machine warranty.
- Made in Scottsdale, Arizona USA.

# Mr. Bulletfeeder®

## by Double-Alpha

**Mr. Bulletfeeder** has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy – a world leader in practical-shooting-related product manufacturing and distribution – at the helm. The design allows the bullet collator to be mounted onto the casefeeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

### Mr. Bulletfeeder Set Up in One Caliber

A heavy, high-quality tray large enough for the Federal primer package. 13606, \$27.00 ea.

# Dillon's Range Bag<sup>^</sup>

**33389 \$139.99**

Borrowing design features from Dillon's original range bag, but with upgraded metal D-rings and clips for the shoulder strap, Dillon's "Retro" Gray Range Bag is constructed of heavy-duty ballistic nylon.

The primary compartment measures 14-1/4"x7"x8" and features two interior pockets measuring 6-1/2"x6-3/4" with hook-and-eye closure flaps. An additional interior pocket measures 5"x7-1/2".

The top cover can be quickly secured via hook-and-loop strips at the end or by two side zippers.

There are two zip-up outer compartments measuring 12"x8"x1-1/2". One of the outer compartments features extra padding for carrying a handgun, and the other has an external zippered compartment for pens, pencils, etc.

## "Border Shift" Ammo Bag<sup>^</sup>

Dillon's two-compartment ammo bag is constructed with a flexible inner liner that will allow the entire volume to be accessible from either zippered opening. You'll never again mix fired brass with loaded rounds!

Border Shift Ammo Bag, Black	<b>13755</b>	<b>\$35.99</b>
I.D. Card Holder <sup>^</sup>	<b>14575</b>	<b>2.99</b>

## Dillon Pistol Case<sup>^</sup>

Our pistol case was designed to hold and protect your pistol and carry 200 rounds of ammunition! The back side of the durable, ballistic nylon case features two pockets that will accept Dillon's 100-round ammo boxes. The case features a heavy-duty, locking YKK zipper, closed-cell foam padding and a suede-textured fabric liner to protect your pistol's finish. Measures 14" x 9".

**12709 \$39.99**

# Ukrainian Guns Hot! American Guns Not?

Are your guns defending liberty...?

By Alan Korwin

Ukrainian guns are on the front burner, front page, front and center on every channel of communications we've got. All of a sudden, it's – hooray for the armed Ukrainians – an armed citizenry! Get those damned Rooskies! Left wingers in the woke media are once again bent into pretzels over their own hypocritical lack of principle. They seem in favor of what they previously hated with a passion.

They've got a large, misled chunk of the American people with them. The gun-hating, hoplophobic masses who do not and cannot think straight are asking: How can we be cheering for guns? And armed people? Aren't guns flat-out bad? What's happened to us? Hint: Reality is setting in.

Readers of this publication and of my work are well aware that guns are good, serve the noblest of purposes, even if evil people can misuse them, the same as cars, cash, anything. Now in the face of heroic effort by a literal militia, fighting off a monstrous invading government power, hard-core leftists cheer on the valiant defenders of their borders from naked aggression and trespass. Even as our own borders are breached by a larger invading force.

It's the same fight and civil defense we preach here in the U.S., those of us with our heads on straight, known by many names: conservatives, the right side, republicans (with notable exceptions), independents, libertarians and more. No one wants war and its attendant destruction and tragedy. It's only when push comes to shove that a people would even think of taking up arms in defense

– the righteous, noble, excellent and proper use of arms.

It isn't really true that, "No one wants war and its attendant destruction and tragedy." Our enemies want it. Communist Russia's dictatorial leadership wants it. They've geared up for it, sent more than 100,000 of their citizens to go do it. Gave them arms and tanks and air power – everything they need (they hope) for a victorious outcome from the destruction and tragedy they deliberately seek.

The communist Chinese are also elated that someone is deliberately attacking a (sorta) western ally, giving poor Mr. Biden a conniption and baffling our underdeveloped military-planning girly men. The pubic *en masse* understands guns and their value. Our soldier warriors understand. Our political leaders, not so much.

If ever there was an argument for eliminating the unconstitutional limits on ammo size and devices, this is it. Ukrainians are pleading for shoulder fired anti-tank rockets. I'd send them mine but haven't got any. I'm limited to .50 caliber and just haven't got RPGs or anything like that. If true invasion happened here, we'd have to beg, borrow and steal real "weapons of war" – the term leftists inaccurately apply to slur our sidearms and semi-automatic rifles.

Now little of this makes the so-called "news" as you know. What a glorious opportunity they're missing – we're all missing – how an armed public helps provide protection. Russian invaders thought they had a tactical edge. Thank goodness neighboring states see the problem, feel the risk themselves,

"If ever there was an argument for eliminating the unconstitutional limits on ammo size and devices, this is it. Ukrainians are pleading for shoulder fired anti-tank rockets. I'd send them mine but haven't got any. I'm limited to .50 caliber and just haven't got RPGs or anything like that."

# New-Reloader XL 750 Package

**Y**ou've made the decision that loading your own ammunition is right for you. You're ready to pull the trigger, but uncertain of exactly what you need. Dillon has taken the work out of this.

We have assembled a New-Reloader Package, featuring our XL 750 reloading machine, with the most popular machine options, along with the accessories you'll need to begin reloading immediately.

This package is available in 9mm, .223/5.56mm, or BOTH.

## 9mm 750 Package:

XL 750 in 9mm  
9mm Die Set  
Bench Wrench  
Small Pistol Casefeeder  
XL 750/650 Strong Mount  
Bullet Tray Kit  
Roller Handle  
9mm Case Gage  
D-Terminator Digital Scale  
Primer Flip Tray  
4 Small Primer Pickup Tubes  
Digital Calipers  
*The Complete Reloading Manual for the 9mm Luger*

NEW 750 PACKAGE 9: \$ (Please Call)

## .223/5.56mm 750 Package:

XL 750 in .223/5.56mm  
.223/5.56 Die Set  
Bench Wrench  
Small Rifle Casefeeder  
XL 750/650 Strong Mount  
Bullet Tray Kit  
Roller Handle  
.223/5.56 Case Gage  
Dillon Case Lube  
D-Terminator Digital Scale  
Primer Flip Tray  
4 Small Primer Pickup Tubes  
Digital Calipers  
*The Complete Reloading Manual for the .223 Remington*

NEW 750 PACKAGE 556: \$ (Please Call)

## Combo Package (.223 Conversion Pictured at Right) Includes the 9mm Package Above, Plus:

.223/5.56 Conversion Kit  
.223/5.56 Die Set  
XL 750 Quick Change  
.223 Case Gage  
Dillon Case Lube  
Small Rifle Casefeed Plate  
*The Complete Reloading Manual for the .223 Remington*

NEW 750 PACKAGE COMBO: \$ (Please Call)

**New-Reloader Package,  
XL 750 9mm**

## Combo Package .223 Conversion

# Dillon Die Sets

## Sizing/Depriming Die (Pistol)

Our sizing/depriming dies feature a “floating decap assembly” with a snap spring that throws the spent primer off the pin and eliminates the primer “draw back” that often occurs when decapping military brass. The primary feature of Dillon’s size die design is the long, tapered carbide ring with a radiused opening. That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that’s still only a part of the story.

## Bullet Seating Die (Pistol)

Our quick-disassembly seat die allows the user to disassemble and clean the seating die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We’ve incorporated a “flip-flop” seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem. Dillon’s double-ended design makes it simple to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time.

## Crimp Die (Pistol)

We’ve made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you’ll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

### Dillon Carbide Pistol Dies (Three-Die Sets)

### Spare Decapping Pins

Package of 10	21528	\$8.00
---------------	-------	--------

## Sizing/Depriming Die (Rifle)

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for “squeak-free,” effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

## Bullet Seating Die (Rifle)

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

## Taper Crimp Die (Rifle)

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today’s marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

### Dillon Rifle Dies (Three-Die Sets)

# BL 550<sup>^</sup>

## Dillon's Basic Loader

**\$395<sup>00</sup>**  
**15399**

Reloading Dies and Caliber Conversions sold separately  
Pictured with optional accessories:  
Strong Mount 22051 \$95.00

Dillon's RL 550 has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles. The BL 550 is essentially an RL 550 without the automatic priming and

powder systems. Capable of loading over 160 calibers – just like the RL 550 – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550 loader! The interchangeable toolhead (Page 25) makes it quick, easy and inexpensive to change calibers.

**AUTO PRIME SYSTEM<sup>^</sup>** 16627 \$120.00

### PRIMER SYSTEM EARLY WARNING<sup>^</sup>

Allows you to focus on loading instead of worrying about failing to seat a primer, and is an easy slip-on attachment to the auto prime system. 20302 \$37.00

### AUTO POWDER SYSTEM<sup>^</sup>

Accurate to within 0.1 grain, our Automatic Powder Measure is world renowned for its charge-to-charge consistency. 20251 \$130.00

**OPTIONAL MAGNUM RIFLE POWDER BAR**  
21353 \$45.00

### AUTO EJECT SYSTEM<sup>^</sup>

Greatly increases your ammo production capabilities and adds a Cartridge Chute/ Bracket and a Cartridge Bin to your reloader. 22120 \$43.00

### BL 550 POWDER DIE<sup>^</sup>

Extra powder dies for your BL 550 make it easier to set up additional toolheads for loading different calibers.

**Powder Die:** 16629 \$27.00  
**Oversize Die:** 16626 29.00  
**Plastic Funnel:** 16617 9.00

### POWDER MEASURE ADAPTER

If you load rifle cartridges with long-grain extruded powder, you can now use any manufacturer's powder measure with 7/8" x 14 threads on your RL 450, AT 500, BL 550 or RL 550. (Requires the use of an RL 450 powder die – see below.) 20029 \$32.00

**RL 450 Powder Die** 20308 32.00

## Shooting Mat

Dillon's shooting mat is made of tough ballistic-weave nylon fabric, with a large skid-resistant elbow pad area. The "ground" side is moisture resistant and wipes clean easily. The padding is dense, closed-cell foam to provide both shooter comfort and a stable shooting base. The mat is equipped with a shoulder strap, a carry handle and two straps with snap-release buckles.

# Dillon Reloading Accessories

**A Strong Mount** increases your machine's "footprint" to over 10", spreading the load over the whole bench instead of stressing the leading edge. For XL 750/650 owners with limited overhead clearance, the XL 750/650-only mount raises the machine 6" above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL 550/XL 750/650	<b>22051</b>	<b>\$95.00</b>
XL 750/650-only	<b>22052</b>	<b>93.00</b>
"SDB"	<b>22223</b>	<b>105.00</b>

**Color Coded Aluminum Toolheads** for the RL 550 and XL 750/650 make it easy to tell at a glance which caliber you're set up to load.

Gold RL 550	<b>62134</b>	<b>\$45.00</b>
Blue RL 550	<b>62132</b>	<b>45.00</b>
Black RL 550	<b>62133</b>	<b>45.00</b>
Gold XL 750/650	<b>62138</b>	<b>50.00</b>
Blue XL 750/650	<b>62136</b>	<b>50.00</b>
Black XL 750/650	<b>62137</b>	<b>50.00</b>

**These plates bolt directly to your bench top, and are drilled and tapped to allow mounting your reloading machine directly to the top of the mounting plate.**

**Stock #62005, \$95.00** is for:

XL 750, XL 650, RL 550 and Square Deal "B". **Stock #62006, \$95.00** is for:

RL 1100, CP 2000, Super 1050 and RL 1050 as well as any Dillon reloading machine that is mounted on the Dillon Strong Mount.

**Our Bullet Tray** is a simple, shallow aluminum tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL 550 and XL 750/650 when equipped with the RL 550/750/650 Strong Mount, and a separate kit is available for the RL/Super 1050.

Bullet Tray Kit	<b>22214</b>	<b>\$60.00</b>
1050 Tray Kit	<b>22215</b>	<b>60.00</b>

**The Low Powder Sensor** provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

<b>16306</b>	<b>\$52.00</b>
--------------	----------------

**Our Toolholders** are available for your reloading machine and ensure that the tools you need to service your reloader are handy and organized. No more digging around your bench trying to find the right size hex wrench!

XL 650 with Wrench Set	<b>11555</b>	<b>\$44.00</b>
RL 550/XL 750 with Wrench Set	<b>11541</b>	<b>42.00</b>

SDB-Only Wrench	<b>19970</b>	<b>16.00</b>

**The Square Deal "B" Toolhead Stand** holds your SDB toolhead, powder measure, dies and caliber conversion components (*not included*) in an orderly manner.

**62225, \$45.00**

**Our Toolhead Stands** for the RL 550 and XL 750/650 are the ultimate in convenience for keeping your reloading bench clean and uncluttered.

**22055, \$29.00 each**

**Dillon's 1050 Toolhead Stand** is now available to store caliber quick changes for the 1050.

**62200, \$58.00**

**Equipment Dust Covers** are made of tough packcloth nylon and add security to your loading bench. Your reloader will be protected against more than dust as the machine covers come with a D-ring that allows the heavy duty zipper to be locked.

SDB/550 Cover	<b>13795</b>	<b>\$24.99</b>
XL 750/650 Cover	<b>10443</b>	<b>39.99</b>

## "D-TERMINATOR" Electronic Scale

- 1500 grain/100 gram capacity
- Accurate to 0.1 grain/0.01 gram
- Uses four AA batteries (included)
- Comes with its own AC adapter
- 100g scale check weight included

*NOTE: Dillon electronic scales are covered by a one-year warranty from date of purchase.*

**\$149.99**  
**10483**

Dillon's **"Belted Magnum" Powder System** features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

**97126 \$205.00**

The **Powdercheck System** (available for XL 750/650 and Super 1050 reloading machines) sounds an alarm if the powder charge in a round is out of limits either high or low.

**21044, \$93.00 each**

An **Aluminum Roller Handle** gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

**17950 \$64.00**

Dillon's **1" Bench Wrench** fits our 1" Die Lock Rings which give you more space on the toolhead.

**10842, \$15.00 each**

Our **Machine Maintenance Kits** come with everything you need to keep your Dillon loader cleaned and lubricated up to factory specifications. Available alone or in combination with a spare parts kit for your machine.

## Lyman Neck Expander Die

Improves accuracy of cast and jacketed bullet reloads. Extends case life. A "Must-Have" die for the cast bullet or flat-base bullet user. The first step expands the inside of the case neck to just under bullet diameter for precise case neck tension in the finished reload. The second step expands the case mouth to bullet diameter or slightly over. This allows the jacketed or cast bullet to be started perfectly centered in the case mouth and properly aligned with the axis of the case neck. By adjusting the

plug slightly deeper, the second step also provides a slight flaring of the case mouth for reloaders using cast bullets.

## Dillon AkroBins<sup>^</sup>

AkroBins are ideal for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550/XL 650/750 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

## Dillon Utility Boxes<sup>^</sup>

Dillon's Utility boxes are ideal for all those accessories that don't quite fit into the compartments of your shooting bag. The large box measures 13-1/2" x 5-3/4" x 2-1/4" and the small box measures 4-5/8" x 6-3/8" x 1-5/8". Use them for cleaning gear, extra magazines, repair parts, first aid supplies, reloading accessories and tools – the list is endless.

**WARNING:** These products contain lead, which is known to cause birth defects, other reproductive harm and cancer. Handling components, ammunition, cleaning firearms or discharging firearms in poorly ventilated areas may result in lead exposure. Have adequate ventilation at all times and wash your hands thoroughly after exposure.

# Shellsorter

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

# They Got It Right!

## Springfield Armory SA-35 9mm Luger

**Reviewed by Peter Caroline**

It was the best job I ever had. I was 21 years old, and stationed at Ft. Belvoir, VA. I was moonlighting on weekends at Hunter's Lodge, the retail outlet for Interarmco in Alexandria. They imported captured, confiscated and obsoleted handguns from all over the world. The guns were broken down into major components before shipment, and all thrown into large crates in order to avoid duty on whole guns. My job was to figure out what parts went with each other and assemble them into whole, matching serial numbered, functioning handguns. And, best of all, I got paid in guns of my choice.

I assembled Webleys, Enfields, Tranters, Lugers, Mausers, Walthers, Sauers, Berettas, Astras, Nambus and who knows what all else. All showed signs of age and service. Interestingly enough, in all of the wide variety of handguns that I worked on, there was not ONE FN or Inglis P-35 Hi Power. Thinking about that, years later, the answer is obvious. These guns were not sold as surplus because they still remained in service, all over the world.

My first P-35 was a beater...a waffenamt-marked specimen with no trace of finish. As I recall, it cost me \$12 back in the early 1960s. And I've owned several more Hi Powers over the years. What they all had in common was a deplorable trigger and perfunctory sights. Their common redeeming virtues were their 13+1 round capacity and superior ergonomics. Remember that the S&W Model 59 and the Glock, in 1971 and 1982, respectively were the only other reputable high-capacity pistols available at the time.

In 2015, some importer brought in a bunch of half-way decent Hi Powers from Israel and the price was in the three hundred and something range. The one I

purchased was made in 1985, matte black with hideous rubber grips. I fitted a set of pre-war wooden grips and had the gunsmith shop at Gunsite install XS sights, remove the magazine safety disconnect and smooth up the trigger.

Fast forward to the 2020 SHOT Show. Brownell's announced that they would be selling a Turkish-made Hi Power replica. They didn't have one at their booth, but a Brownell's rep took me over to a nearby exhibit where

several were on display. The models shown, in a choice of black finish or stainless, looked really good. Review samples were not forthcoming, and I later heard that those few that did get out to reviewers did not fare so well in the long run.

In late October of 2021, I received an email announcement from Springfield Armory, announcing the introduction of their own, American-made, iteration of the classic P-35, entitled the SA-35. At first glance, it appeared nearly identical to the original, but there were some significant improvements. First and foremost (to me, at least), it did not incorporate the accursed magazine safety of its Belgian predecessors. This would result in a very pleasant 5-1/2-lb. trigger. Magazine capacity was boosted to 15+1, and the SA-35 would happily accept earlier 13-round

magazines. The sights were vastly improved, ditto the ergonomics. All this was available at an MSRP of \$699, making the SA-35 more than competitive with the current assortment of polymer 9mms.

Of course, I immediately requested a review specimen. Apparently, there were many requests before mine. I didn't receive my SA-35 until the second week of December 2021. In the meantime, virtually every gun publication had an SA-35 on the cover. Just

**“Interestingly enough, in all of the wide variety of handguns that I worked on, there was not ONE FN or Inglis P-35 Hi Power. Thinking about that, years later, the answer is obvious. These guns were not sold as surplus because they still remained in service, all over the world.”**

days after Springfield Armory's initial announcement, [Gunbroker.com](http://Gunbroker.com) had at least half a dozen SA-35s up for bid, with multiple bids up to the \$1,800 range, more than a bit reminiscent of the Dutch tulip market craze of the 17th century.

When I received my SA-35, I hauled out my 1985 Hi Power for comparison. According to all the earlier publication reviews, virtually all parts were interchangeable. The finish, according to Springfield Armory, is matte blued. It looks black to me, and it's exceptionally even. Other than maker's name, model number and serial number, all in miniscule type, there's no verbiage or logos on the frame and slide. The safety is more prominent and easily accessible, although not ambidextrous (that will be addressed as soon as I can find a competent gunsmith).

The older Hi Power has a spur-type hammer that supposedly invited hammer bite. The SA-35 has a rowel-type hammer, which eliminates this glitch. The magazine well has been beveled for faster reloads, and magazines instantly drop free when you press the magazine release. The sights are a revelation... the rear sight is black, finely checkered, with a U-shaped notch, and can be pushed against a hard surface to rack the slide. The front sight is a square black post with a white dot. I'm old, astigmatic and wear corrective lenses for reading, but I found no problem in instantly acquiring a correct sight picture. Both sights are dovetailed into the slide and can be adjusted for windage or replaced if felt necessary. The walnut grips are fully checkered and are interchangeable with all other Hi Power grips.

Okay, it's pretty, but does it shoot? I brought along an

assortment of 115-, 124- and 147-gr loads, both FMJ and hollowpoint, even several treasured Black Talons. I also brought a mixed bag of you-name-it, both commercial and military. The original Hi Power was designed for

standard military 124-grain ball but tended to have feeding issues with hollowpoints. Also, +P loads were not recommended. The SA-35 has no problems with +P, HPs or anything else. Trigger pull was a consistent 5-1/4 lbs., quite acceptable for an EDC weapon. I did have one glitch when firing my mixed bag. Everything was going along smoothly when all of a sudden the slide refused to slam shut on one round. I removed the round and examined it closely. It was a StarLine case, and on the base it read "9x21." Where did that come from? Moving on...shooting off a sandbag, 2" groups at about 20 yards were easily repeatable. This is quite acceptable performance, bearing in mind that the original Hi Power was developed as a military pistol, offering a large number of shots at relatively large targets at short ranges. Having no hostile forces available at the moment, I had to content myself with golf balls; when hit properly at any range, they disappear into another dimension.

Overall, Springfield Armory has done a masterful job of creating a significantly improved iteration of a widely accepted design. It's all American-made, no-MIM, tight tolerances, and at a very reasonable price (if you can find one; it may take a while for supply to catch up with demand).

Springfield Armory

# MAGPUL PMAG Drums

MAGPUL's PMAG drum magazines are durable, lightweight, highly reliable and made in the USA. The unique drum configuration keeps the height of the magazine manageable and allows for prone firing and easier storage. Features an easy-to-use loading lever, paint pen dot matrix for easy marking, and a rear window for instant capacity indication.

*Regarding GLOCK pistol version: It is recommended that you install a new OEM magazine release on Gen 1-3 GLOCK handguns to support the extra weight of the magazine. Gen 4 GLOCK handguns will require an aftermarket metal magazine release. Installation of a new recoil spring assembly to ensure reliable feeding is strongly recommended. Individual variations between firearms may result in an extra power recoil spring being required. Use of the D-50 GL9 in pistol caliber carbines (PCC) is not recommended, because the increased length of the feed tower will be partially unsupported in most pistol caliber magazine wells. This unsupported condition may cause premature wear on the feed tower magazine catch, and (in firearms which deviate from factory magazine well specifications) may result in improper round presentation and failures to feed.*

### All-in-One Torque Driver Kit

Featuring the Fix It Sticks All-in-One Torque Driver. Tighten down your scope rings, mounts, actions screws, etc. while in the field, at the range, or at home. Kit includes: All-in-One Torque Driver (15 - 65 inch lbs); T-Way T-Handle Wrench; 15 different bits: T10, T15, T20, T25, [hex 3/32, 5/64, 1/8, 5/32, 3/16, 2.5mm, 3mm, 4mm, 5mm], P1, slotted #5; 1/2" Socket and 1/4" bit adapter set; and Zippered case with Molded Holder.

29835 \$112.00

### Replaceable Edition Shooting/Hunting Kit

This kit offers unmatched portability, functionality and versatility. Two Fix It Sticks (which combine to form a T-Handle) and 16 bits are held in a molded bracket for portability/storage. Extra room on each end can hold two additional bits. Includes two sticks, bracket, and 16 different bits: 2.5mm Hex, 3mm Hex, 4mm Hex, 5mm Hex, T-10, T-15, T-20, T-25, T-30, 1/8" Hex, 5/64" Hex, 3/32" Hex, 5/32" Hex, 3/16" Hex, Slotted #5, and Phillips #1.

29843 \$40.00

### Mini All-in-One Torque Driver

Tighten scope rings, red dot sights, mounting plates, etc. Just turn the drive handle until the hash mark lines up with the torque value you need (from 6 - 25 inch-lbs).

29837 \$55.00

### All-in-One Torque Driver

Tighten scope rings, mounts, action screws, etc. Just turn the drive handle until the hash mark lines up with the torque value you need (from 15 - 65 inch-lbs).

29836 \$60.00

### Scope Bubble Level Set

Level your optics with machined aluminum levels, featuring precise UK-sourced bubble vials. Kit includes: Magnetic level, NATO/Pic rail level/anti-cant device, and Protective foam carrier with pouch.

29839 \$50.00

### Scope Jack

A new way to level your optic, the Scope Jack works with Any 1/4 inch driver to quickly and easily level your scope to your NATO/Pic rail. Just mount the Scope Jack to the rail under your scope and turn the drive handle until the lifting arm engages with the flat section under your turrets. Once the scope is level, maintain pressure while tightening your ring screws to keep optic level throughout the process.

29838 \$44.00

### Bolt Carrier Group Scraper

Custom bit that is designed to clean carbon off the various surfaces of the Bolt Carrier Group. Works with any standard magnetic 1/4" driver. Black Isonite finish for increased corrosion resistance and strength.

AR-15 (Top) 29840 \$10.00  
AR-10 29841 \$10.00

### Glock Tool Kit

Glock tool kit including two custom bits designed to aid in the assembly and disassembly of Glock Handguns / Front Sights. Includes: *Glock Front Sight Tool*, a 3/16" Hex Thin Wall Nut Driver - Integrated magnet holds the screw securely in place. Machined from Solid Steel Bar Stock. Works with any standard 1/4" bit driver. 3/32" Metal Pin Punch - Punch is sized to ensure easy removal of all Glock pins by hand. Machined from Solid Steel Bar Stock.

29842 \$16.00

### Remington Bolt Opener

Access your Remington 700 firing pin quickly and easily in the field with our compact custom bit. Levers the firing pin head with a "bottle opener" action. Molded synthetic polymer bushing protects bolt plug from damage.

29844 \$20.00

## Master Sight Pusher™

The Real Avid Master Sight Pusher is a professional-grade tool that makes quick work of changing pistol sights while protecting both gun slides and the sights themselves. Heavy-duty, built to last and smartly designed to work on most any modern pistol sights. The oversized, ergonomic Easy Torque™ Handle partners with extra-fine drive threads to provide maximum torque with minimal effort when removing or installing sights. The Universal Press Block features multiple contact surfaces for almost any size and style of press-fit dovetail slots and sight profiles. Adjustable non-marring contact surfaces securely hold both 1911 and flat-bottom pistol slide styles.

Master Sight Pusher

## Lyman Mechanical Trigger Pull Gauge

Lyman's mechanical trigger pull gauge is a simple, accurate and cost-effective way to measure the weight of your firearm's trigger pull. Made of tough machined aluminum and steel components, the gauge will stand up to years of use. The gauge features a rolling trigger shoe, "T" handle, a sliding indicator that holds your highest weight and a zero-adjustment wheel.

- Reads from 0 to 12 pounds
- 2-ounce increments
- Highest weight indicator
- Aluminum and steel construction
- "T" handle and hanging loop for storage

Double Duty TDU®

Trainer

Operator

The Double Duty TDU® belt is metal-detector friendly and offers two color options. Both the Trainer and Operator belts feature 6,000-pound-test buckles and heavy, reinforced stitching, therefore can be quickly converted into secure tie downs, secondary carry straps or emergency harnesses. All 5.11 tactical belts are made of strong nylon webbing and provide a stable support for carrying firearms and accessories. *According to 5.11 Tactical, belt sizes run small, so they recommend you order one size up for the best fit.*

# BLADE-TECH™

The Blade-Tech Ultimate Carry Belt by Nexbelt is specifically designed for those who carry a firearm daily for personal defense. The PreciseFit ratchet system allows you to quickly tighten or loosen the belt in 1/4" increments up to 6" for the perfect fit – no matter how you carry. Rest assured, this will be the most comfortable and fastest adjusting belt you will ever own. The Ultimate Carry Belt has a water-resistant backing that helps prevent moisture from penetrating the outer surface and allows for extra strength and durability. **One size – adjusts to fit all.**

# Comtech's STINGER

**THE STINGER:** Comtech's own personal defense device. Designed to act as a "force multiplier," it's like having the punching power of a karate master – instantly! There's really nothing like it for easy carry and access. It passes un-noticed by 90 percent of people who see it. Yup, just another "keychain device" to most, and yet it works so well when needed. You deserve a Stinger!

19495 \$9.99

# BLADE-TECH™

## "Signature" OWB Holster

Over the last 21 years Blade-Tech has been dedicated to perfecting the OWB holster. In collaboration with industry leading polymer experts, Blade-Tech created an incredibly strong proprietary blend of polymers, that allowed them to precision mold the "Signature OWB holster" with extreme accuracy for a perfect fit every time! Features a positive lock trigger guard, adjustable retention screws and Tek-Loc™.

This holster is designed for an extreme high rise carry and offers the best of both worlds. Not only does it allow you to carry a full-size automatic handgun, it's also totally concealable. The unique design has Mernickle's patented stabilizer flap that goes behind the belt. This prevents the grip of the gun from tipping away from the body while doing daily activities. The high-rise position allows you to sit in chair or vehicle without needing to take the gun out of the holster.

XHR 1911 Holster **19018 \$99.95**

Designed to be the ultimate in concealed carry for those not comfortable with an Outside the Waist Band (OWB) holster – the ISP offers a great carry solution! This holster gives the appearance of a front pocket wallet and breaks up the outline of your gun. The smooth Herman Oak leather inside protects the finish of the gun, but the suede outside ensures that the holster sticks in the pocket.

# Apex Tactical Specialties Action Enhancement Trigger for Springfield Armory Hellcat

The Action Enhancement Trigger for the Hellcat pistols is the easiest, quickest upgrade you can do to the trigger system that significantly improves the feel of the trigger pull, without reducing factory safety values. When properly installed, this drop-in trigger will:

- Reduce trigger pull weight to 5.0 to 5.5 lbs after break-in
- Smooth uptake and reset
- Reduce trigger overall travel and reset distance
- Deliver a crisp trigger break
- Directly replaces factory components without additional fitting
- Maintains factory safety values

10175 \$79.99

# Apex Tactical Specialties

**S&W J-Frame Duty/Carry Spring Kit** – Installation of this kit reduces the trigger pull weight by approximately 3 pounds from factory specifications.

14309 \$25.99

**S&W Revolver Frame-Mounted Firing Pin** – The combination of the Firing Pin and the Reduced Power Firing Pin Spring is designed to reduce the probability of light strikes.

# The Pioneer Arms Sporter Rifle, and How it Comes to be This Way

By Oleg Volk

1989 was a bad year for American gun owners. President George Herbert Walker Bush issued an executive order further restricting imports already curtailed by the 1968 Gun Control Act. Next year, the restrictions were confirmed by Congress and made law. This round of impositions was based on a maliciously narrow interpretation of the term “sporting purpose” in GCA1968, putting most modern rifles out of reach for Americans. There’s conjecture that some protectionism was intended to “protect” US manufacturers, as late William B. Ruger Sr. supported this and other restrictions, on the apparent theory that feeding other industry players to the Federal beast would keep his enterprise safe in the meantime.

The reality is that this law made very little difference beyond introducing massive, pointless inefficiencies into the import process, raising prices in the meantime. In other words, another scheme to reduce the ability of law-abiding Americans to defend themselves against various criminals, including those riding under the colors of the law. Fortunately, Americans are inventive and found a way around this imposition. The steps around section 922r of the title 18 of the US code allow conversion of imported rifles into nominally domestic products.

The law requires that an imported rifle not meeting the vague and arbitrary “sporting purpose” test contain no more than 10 foreign parts from a 20-part list:

- |   |                            |
|---|----------------------------|
| (1) Frames, receivers, receiver castings, forgings or stampings | (10) Trigger housings      |
| (2) Barrels   | (11) Triggers              |
| (3) Barrel extensions   | (12) Hammers               |
| (4) Mounting blocks (trunnions)                                 | (13) Sears                 |
| (5) Muzzle attachments  | (14) Disconnectors         |
| (6) Bolts   | (15) Butt stocks           |
| (7) Bolt carriers   | (16) Pistol grips          |
| (8) Operating rods  | (17) Forearms, hand guards |
| (9) Gas pistons   | (18) Magazine bodies       |
|   | (19) Followers             |
|   | (20) Floor plates          |

Some rifles have all 20 them, others only a few. Usually, simpler parts like hammers and furniture are swapped out first, while receivers and barrels are retained. I went to Pioneer Arms US in Florida, an importer specializing in Polish firearms manufactured in Radom, to see how this process works. They showed me the process, start to

The author with his 922r compliant Pioneer Arms rifle as it arrived in the US.

Replacing the custom thumbhole stock with a US-made buttstock.

Adding a US-made pistol grip.

Removing the factory muzzle device.

922r compliant  
US-made  
muzzle brakes.

Pioneer Arms receivers  
with unfinished magazine  
wells prior to machining.

Using a "GO"  
gage on the  
magazine well.

Chamfering the  
magazine well.

finish, and had me convert one rifle from the single-shot configuration with a disposable plywood thumbhole stock to a proper semi-auto AKM pattern Sporter rifle.

The rifle arrives with a small rectangular cut indicating the front of the future magazine well. A CNC machine cuts two proper mag wells at a session, then the edges are hand-chamfered and reblued. The slant muzzle brake is removed and replaced with either a two-port American-made brake or a highly effective flash hider. Most of the fire control mechanism is removed, with only the original springs remaining. US-made trigger, sear, hammer, and disconnect are installed. The original hand-guard with an internal heat shield and ribbed stand-off molding is retained, but the pistol grip and the buttstock with a soft recoil pad are also American made. The origi-

nal "stock" is sent back to Poland for re-use, as are some of the internals. The guns are shipped with Pioneer's own domestically manufactured polymer magazines: part of the compliance package, a US-made magazine adds three counts to the compliance list. Legally, the use of foreign-made magazines would make the rifle illegal again – it's a classic case of an arbitrary restriction that criminalizes a victimless activity. There's no practical or moral difference between a domestic and a foreign magazine, nor between a Polish-made and a US-made hammer, but ATF would happily victimize you over this non-distinction. The owners and the workers at Pioneer Arms US are all shooting enthusiasts, so they buy or produce parts that not only comply with the legal requirements but also improve the performance of the rifles.

Replacing the trigger assembly.

922r compliant US-made trigger group.

Sight painting enhances the markings for ease of use.

Sight painting isn't part of a compliance process, but an improvement of the original for better visibility of the markings. The rifles are extensively measured and checked after every machining step, with calipers, with GO/NO GO gauges, all in addition to comprehensive function and dimension tests done in Poland. The design in its current configuration was tested at the factory with 15,000-round live fire done in 120-shot increments in auto mode. Post-test measurements showed no change in the headspace, nor any broken or worn parts.

My own live fire test yielded no surprises: "Yep, that's an AK!" The trigger is crisp, without any rebound. The safety lever clicks into place with authority – if a lighter activation is wanted, it can be bent outwards slightly to reduce the detent strength. Using iron sights, I could hit

a 12-inch steel clanger at 100 yards, which is consistent with my ability overall. The sights are generally good enough for a torso hit out to 200-300 meters, depending on the ability of the user. For any longer distance, for point targets at closer range, or to check mechanical accuracy, I would add a TWS sight block red dot mount or their railed top cover for a scope. Reliability was the usual 100 percent, typical of properly made AKMs. Despite the compliance process expenses, this rifle costs little more than a typical surplus AK would have based on approximately 150 percent inflation from 1988 to 2022. It's a pretty good deal for a 7.62x39mm semi-auto rifle with the right fit, finish, and assembly. "Made with pride in Poland," says the box. "Improved in America," can say Pioneer Arms US staff.

# Nighthawk Custom Drop-In 1911 Trigger System

When looking to upgrade the performance of a 1911 pistol, a common improvement sought by shooters is a high-quality trigger job, with a crisp, clean break. Until now, a high-quality trigger has never been in the realm of a "drop-in" upgrade. Nighthawk Custom has changed that with the introduction of its Drop-In Trigger System (DTS) for 1911 pistols.

An all-in-one unit, the DTS replaces your existing hammer, hammer strut, sear, disconnector, and sear spring. Your existing sear pin and hammer pin will be retained for use with the DTS, but no other parts are necessary for installation. With a steel housing securing the unit, the DTS features all Fully Machined™, stainless steel internal components. The traditional three-pronged sear spring is no longer necessary as the springs for the disconnector and sear are built into the unit. A single-leg grip safety spring is included with the DTS to replace the existing sear spring.

The DTS is designed for use in most 1911 models, and installation is simple enough that minimal gunsmithing skills are necessary.

# STEP UP YOUR GAME!

## Check Out the Latest High-Capacity Handguns

By Maureen P. Sangiorgio,  
NRA-Certified Firearm Instructor/Range Safety Officer  
Photos Courtesy HK, Oleg Volk

Crack open any gun magazine, and you'll probably find an article touting the latest high-capacity handgun. These larger-capacity guns have been selling like hotcakes lately, as more companies have developed them. Many gun enthusiasts are purchasing them as soon as they become available, looking for the best and most technologically advanced gear.

But did you know that some states have magazine-capacity limitations for handguns? From 1994 to 2004, the Violent Crime Control and Law Enforcement Act was in force. This federal law defined a "large-capacity

ammunition-feeding device" as a magazine, belt, drum, feed strip, or similar device that has a capacity of, or that can be converted to accept more than 10 rounds of ammunition. Since that time, a number of states have enacted laws banning large or high-capacity magazines. According to the USCCA, currently, there are eleven states with magazine-capacity restrictions that range from 10 to 20 rounds of ammo. To find out if your state has magazine limits, go to: <https://www.usconcealed-carry.com>.

If you live in a state that does not have a magazine-capacity limit, and are thinking of purchasing a high-capacity handgun for personal defense, check out these tips from the experts.

### Consider the Pros and Cons

"While smaller micro compact guns are easy to carry, they traditionally have lower magazine capacity," notes Fred Mastison, president of Force Options Tactical Training Solutions, and internationally recognized as one of the top combatives and firearms instructors in the world.

"The other side of that coin are handguns with high capacity magazines. These are guns that go beyond our standard 15- to 17-round realm. The benefits of these are two fold. First is that they obviously have a higher magazine capacity. The worst case scenario we could ever face is multiple adversaries requiring us to fire a large number of rounds. If you are in this situation with a low capacity or even standard capacity magazine you could be faced with a magazine change. This is time consuming and dangerous during a fight. Having extra ammunition already onboard keeps you in the fight longer before you have to reload."

"The second benefit is that they are larger guns with a longer sight radius," says Mastison. "This along with their extra weight make them easier to shoot accurately. The downside of these guns is always size. They are larger frame guns with longer magazines making them very difficult to conceal. It comes down to choosing the set up that fits you best."

### Check Your Cartridge

According to Chad Enos, Shooting Team Co-Founder at KelTec Weapons, there really is no such thing as a high-capacity firearm. "There are higher capacity firearms than others, but there is no definition for high-capacity. The KelTec PMR30 has a standard capacity of 30 plus one and it comes with two 30-round magazines. I cannot confirm if the PMR30 holds more ammunition than any other handgun on the market since manufacturers are constantly innovating new pistols. We decided to resurrect the Grendel P30 pistol, one of George Kellgren's designs from the early 90s and the result is the PMR30."

At the time of this writing, the PMR30 is the only commonly available semi-automatic, .22 WMR

handgun on the market. It was released in 2011 and so far, as of 2022 it is still in a category of its own. "The PMR30 is chambered for the .22 WMR, or better known as .22 Magnum," says Enos. "Although it fires a .22 caliber bullet, the .22 Magnum cartridge has significant ballistic advantages over its .22 Long Rifle counterpart. That said, I typically would not suggest rimmed cartridges for self-defense due to their reliability track record. Rimmed cartridges have a tendency to rim lock in the magazine, a common issue when rounds are not stacked in the magazine properly. Unfortunately, most rim lock issues are not made known until the firearm has a malfunction. Eliminating every failure variable from a personal protection handgun should be every gun owner's priority. The PMR30 does offer excellent firepower and the .22 WMR cartridge is certainly capable of stopping a deadly threat when using rounds designed for self-defense."

### Rent Before You Buy

I have shot several high-capacity pistols, and if there's one thing I've noticed, it's how different they feel in my hands. I practiced drawing from my holster to try to re-create a self-defense situation, and I found I had to make some adjustments to accommodate the longer magazine. One of my faves is the Heckler & Koch VP9L OR.

To me, the VP9 is very ergonomic, and I liked the trigger feel. According to HK, it's also their best-selling pistol, and has some upgrades. The o-ring bushing on the longer 5-inch barrel tightens up the lockup, and the 20-round extended magazines allow you to shoot more and reload less on long stages. Additionally, the machined optics cut accommodates most popular red-dot pistol sights with one of five available mounting plates (sold separately).

Chambered in 9mm, it features an extended slide assembly with lightening cuts, a five-inch barrel, and interchangeable backstraps and side panels that allow for 27 different custom grip configurations.

Total length is 8.23", with a barrel length of 5". Weight is 27.16 oz, and it retails for MSRP \$999.

As most of the major gun manufacturers are producing high-capacity handguns, I suggest you find a local indoor range and rent a few to find the one that works best for you. Aiming at center mass with a "bad guy" target, your goal is to create a small shot pattern, with the cluster no larger than the size of your fist. Most gunfights take place at about three yards, so send that target out to about 15 feet, and practice, practice, practice.

# Real Avid Gun Tools & Cleaning Gear

Smart Mats™ are cleaning mats on steroids. The no-slip backed padded mat features an oil-resistant surface. It allows you to properly clean your gun without ruining the kitchen table and is large enough to handle field-stripped guns. The ingenious magnetic parts tray ensures your pins, screws and springs are never lost again. This is real world gun cleaning taken to the next level.

AR-15 Smart Mat

Handgun Smart Mat

<b>29041</b>	<b>\$24.99</b>
<b>29040</b>	<b>19.99</b>
<b>29042</b>	<b>19.99</b>

The Master Bench Block™ is the most comprehensive AR15 bench block ever! It allows you to tap 13 critical pins from 5 different components. The block is wrapped in an over-molding that grips to your bench to prevent slippage.

**29033** **\$34.99**

This advanced kit includes every standard and roll pin punch needed to build or work on an AR15.

**29032** **\$39.99**

The Chamber Boss –AR15™ All-In-One AR15 Chamber Cleaning Kit. Every tool you need to easily eliminate baked-on carbon from the AR15 chamber.

**21778** **\$29.99**

Installing a pivot pin is a small step that can quickly become a giant pain in the neck. Meet the AR15 Pivot Pin Tool – the one tool guaranteed to take the nail biting, pin-launching task of installing a pivot pin and turn it into something you might actually look forward to. Align the guide, insert the spring and detent pin, slide the pivot pin into place. Click. Snap. Done.

**29034** **\$9.99**

Carbon Boss™ – AR15. This is the most comprehensive carbon removal multi-tool ever built. Extremely versatile, it has 12 precision surfaces to clean the most critical parts of your bolt, bolt carrier, cam pin, and firing pin. It's the enemy of your AR15's worst enemy.

**29039** **\$29.99**

The unique Accu-Grip™ Picks and Brushes get the job done, feel good in your hand, and won't scratch your firearm. Eight profiles dig gunk out of the places that even the sun don't shine. They're tough on the crud but tender on the metal. A better designed, better built detailing kit that just might make your dentist jealous.

**29036** **\$9.99**

The AR15 Brush Combo™ contains the critical components you need to keep your AR15 chamber and bore carbon free. It contains a star chamber brush and star chamber mop for cleaning inside the hard to reach star chamber. Star chamber pads help collect left-over carbon while applying the perfect amount of oil or solvent. The .223/.56mm bore brush scrubs baked on carbon from lands and grooves.

**29037** **\$9.99**

There's no easy way to scrape carbon out of the star chamber of an AR15 unless you're a surgeon. That's why you use a star chamber brush to loosen the carbon then remove it with these star chamber cleaning pads. Done deal. Now get back to shooting. 20 wool chamber pads per package.

**29038** **\$12.99**

# Real Avid Gun-Cleaning Chemicals

## BORE-MAX™ BORE FOAM

Powerful gun-metal grade foaming solvent is specially formulated to expand and penetrate within the gun bore, rapidly and effectively dissolving performance inhibiting copper and powder fouling.

12oz. can Bore-Max **40215** **\$12.99**

## FOUL-OUT™ GUNK BLASTER

Foul-Out Gunk Blaster blows away grease and grime fast. This powerful gun-metal grade solvent quickly strips gun actions of burnt powder, oil and grease, eliminating malfunctions of moving parts due to fouling and build up. Quickly cleans chambers, actions, trigger groups, bolt groups, slides, choke tube threading, semi-auto gas ports, extractors, ejectors and other hard to reach areas.

12oz. can Foul-Out **40216** **\$12.99**

## GUN-MAX™ GUN OIL

Gun-Max's advanced gun-metal grade formula sets a new standard for protecting, lubricating and cleaning modern guns. Powerful inhibitors displace moisture delivering extended corrosion protection. Advanced anti-friction additives bond to metal surfaces for longer lasting lubrication of moving metal parts. Maximizes performance of semi-auto guns with high cycle rates. Formulated to excel in sub-zero temperatures and harsh operating conditions.

12oz can Gun-Max **40214** **\$12.99**

# Real Avid VIZ-MAX™ Bore Sighter

## THE FAST, EASY WAY TO ACCURATELY BORE SIGHT YOUR RIFLE.

Viz-Max™ is a revolutionary, yet uncomplicated, next generation V instrument. No more fumbling with extra pieces and underpowered lasers to find your mark. Housed in the rugged and protective exoskeleton is a precision machined, factory calibrated laser. The laser projects a powerful green dot providing maximum visibility and quick acquisition. The bore attachment is fast and easy with the hold-fast neodymium magnet.

**10134** **\$129.99**

# Real Avid Smart TORQ™

The most precise and technically advanced torque driver for guns. Specifically developed for optics mounting and gun builds. Discrete inch-pound-increment settings provide spot-on torque adjustments. Comfortable ergonomic grip with Force Assist makes tool manipulation a breeze. The functionally intuitive torque setting with visual, tactile and audible feedback provides confident assurance. To get you started, Smart Torq comes with 12 of the most commonly used gun bits. Never over-torque a scope ring again!

**21776** **\$79.99**

# Real Avid MASTER GUN VISE™

## MULTI-AXIS BENCH-MOUNT VISE WITH TORQ-LOK™

One vise to rule them all. The first real bench vise made exclusively for guns and gun tools. Whether you're building and customizing, repairing and cleaning or mounting scopes and accessories, this vise improves every part of the GUN DIY® experience. Quickly reposition your gun to any orientation without ever removing it from the vise. Insert the Torq-Lok pin for applying heavy force. Use the removable and reversible Gun-Fit jaw sleeves (*not pictured*) for a specific gun grip or turn the leveling knob for simple scope mounting and leveling. Build. Customize. Repair. Mount. Clean. All hail the King....

10135

\$299.99

## Real Avid AR15 Bolt Catch Pin Starter & Pin Punch Set

Two punches, one simple solution to the difficult-to-access bolt catch retaining pin. The orientation of the pin, close proximity to the lower receiver, distance required to safely punch a pin, and the difficulty in getting the pin started makes it a real pain with standard punches. Our simple solution is specially designed to fit flush against the receiver without damaging it, and is long enough to reach the pin. It features a roll pin punch for removing pins and a magnetized roll pin starter punch that eliminates the need for a third hand. Smart, simple, frustration free.

66053

\$14.99

## Real Avid LUG-LOK® Upper Vise Block

Real Avid designed an upper block that leverages the strongest part of the gun – the barrel lugs inside the star chamber. The Lug-Lok is precision machined and precisely fits into all Mil-Spec uppers. It mates perfectly with the barrel lugs, while allowing you to rotate the upper to be able to work on different sides. The Lug-Lok is the safest, easiest and smartest way to lock down an AR15 or AR10 upper into a bench vise.

\$79.99  
119.99

# Real Avid Level-Right™ PRO

A level reticle is critical to long-range accuracy. For longer shots a canted reticle will pull or push a bullet's trajectory off of vertical center. It gets worse the more the distance increases. A level scope means that the reticle will be perfectly aligned with the rifle bore. Balancing small levels on a scope turret and gun receivers has been a commonly accepted

practice for years. Not only is this a clumsy process, it's wrong. The turret on most scopes is not perfectly aligned with the reticle, so even if your turret is level to the gun, your scope may not be. Level-Right PRO simplifies scope alignment in four easy steps. Accurate and intuitive, this instrument quickly aligns the actual scope reticle to the horizontal gun plane, which is key to the long-range accuracy of your rifle. Level-Right PRO helps you quickly and confidently mount a scope for maximum accuracy.

Level-Right PRO

21777

\$69.99

# Real Avid ARMORER'S MASTER KIT™

This kit of Master Grade Tools and how-to information equips you to confidently tackle everything from building your own gun from the ground up to customizing or modifying an existing gun. With better tolerances, materials and expanded capability, every tool is carefully designed to make each job as simple and easy to execute as possible. Housed in a professional tool case and equipped with step-by-step instructions, you will be able to work smarter and create better guns regardless of your experience level.

31401 \$279.99

## ARMORER'S MASTER WRENCH™

The Real Avid Armorer's Master Wrench features best-in-class strength, precision fitment and ergonomic intelligence. Wrenches seat squarely for a no-slip fit on stubborn barrel nuts, castle nuts, muzzle brakes, or fixed stock receiver extensions. Industry first torque wrench attachment location is optimally positioned to provide consistent torque for all nuts. As a bonus, interchangeable hammer heads make the Armorer's Master Wrench a "Master" hammer as well! This is the right tool for the job... and for you.

31402 \$79.99

## BORE BOSS®

The single piece Dual Action Cable with integrated phosphor bronze brush and braided mop wraps around the unique Flex-Case Handle to keep the system stowed and organized. To use, simply flip, feed, clip and pull. Throw it in your pack, or put it in your pocket. It's the next best thing to a self-cleaning gun.

**The CED7000 Shot Timer** is a breakthrough in technology. No other timer to date offers this combination of advanced features, compact size and light weight. This is the "next generation" Shot Timer here today! Comes with a rechargeable battery with low-battery LCD indicator and a universal charger.

19208

\$129.99

**CED Reloading Machine Covers** – Unlike other reloading machine covers on the market today, the CED Machine covers are designed to include the DAA Mr. Bullet Feeders and Autodrives in some cases. Made of a strong nylon material, they include grommets for air circulation, and an ID holder that allows you to place your load details on each machine in use. A D-ring located at the zipper closing allows the cover to be locked, keeping children from places they should not be! Offered in two size ranges, a 650/750 medium cover and the large 1050/1100 model.

650/750 (Medium)	13693	\$39.99
1050/1100 (Large)	12888	39.99

# Swab-its

No s#!+, there I was...in my office, cleaning my revolver when the boss walks in with that "whiskey-tango-foxtrot" look on his face. "Hi," I said (*thinking fast*), "I'm trying out these Bore-tips before I write the *Blue Press* copy for them. They work GREAT!" The **Bore-tips Swabs** REALLY DO work. What you can't see under the foam is a plastic jag sized for a tight bore fit which provides for the uniform application of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reuseable.

.22/.56mm (6 ea.)	15310	\$6.00
.243/6mm (6 ea.)	15311	6.00

Brown 5-Mag. Double-Stack (9/.40 GLOCK)	19857	39.99

# Slip 2000 Products

## 725 Gun Cleaner Degreaser

should truly be called Super Degreaser. This water-based cleaner will cut through the toughest cosmoline, carbon, grease and grime! Its super strength allows it to degum and degunk the dirtiest of gun parts when sprayed on or used in parts washers or solvent tanks! **NOTE:** To help prevent rusting, users must apply a gun lubricant immediately after cleaning to disperse any moisture in parts.

16 Oz. 19237 \$24.00

## Slip 2000 Carbon Killer

provides you with a safe, effective way to clean carbon, lead and plastic wad fouling. Unlike other gun cleaners, this product is non-flammable, non-hazardous and biodegradable. Designed for soaking metal parts with baked on carbon, Carbon Killer dissolves carbon and lead on contact. **NOTE:** Carbon Killer is for cleaning internal metal gun parts with baked on carbon by soaking them. It is an aggressive cleaner and should not be used to clean the outside of your gun. It can damage and even remove some finishes.

15 Oz. 19234 \$24.00

**Slip 2000's Extreme Cleaning System** contains 2 Oz. bottles of: Carbon Killer Bore Cleaner, 725 Gun Cleaner Degreaser, and EWL Extreme Weapons Lubricant.

11652 \$28.00

**Slip 2000's AR Cleaning System** contains a 7 Oz. bottle of Carbon Killer Bore Cleaner, a 15cc syringe of Extreme Weapons Grease, and a 1 Oz. bottle of EWL Extreme Weapons Lubricant.

11676 \$22.00

**Slip 2000 Extreme Weapons Lubricant (EWL)** was designed for use on chain guns and machine guns like the MP5 and the 249SAW. It contains a proprietary Anti-wear agent that reduces friction and wear by 90-95 percent. It is an excellent CLP and is able to clean, lubricate and protect.

4 Oz. 11644 \$21.00

**Slip 2000 EWL30** has the same properties as EWL, except it is a lot thicker. It contains a proprietary thickening agent that makes this lubricant consistency like a 30-weight motor oil. It was designed for those who want or need a lubricant that will not migrate at all and don't want to use a thick grease.

4 Oz. 11645 \$24.00

**Slip 2000 Copper Cutter** is specially formulated to remove copper, lead, powder residue and plastic wad fouling from bore surfaces with little scrubbing! **NOTE:** It is a water based, ammonia enhanced product and will remove all lubrication or oil protection, so always re-lube all parts cleaned.

4 Oz. 11646 \$14.00

Each Slip 2000 **Gun Wipe** packet contains one 5" x 8" wipe treated with Slip 2000 Synthetic Gun Lube. Perfect for wiping your guns down after a day on the range or while out on a hunt. Apply to all metal surfaces. Great for light carbon cleaning. Safe for all firearm stocks and grips.

20 Pack 11674 \$17.00

## MIL-COMM Extreme Performance Lubricants

**TW-25B** is the choice of leading firearms manufacturers, armorers, pro shooters and gun enthusiasts, and is recognized as the world's best all-purpose weapons lubricant/protectant. It is now widely specified by the U.S. military for their most critical performance weapons systems. Environmentally safe, non-carcinogenic, non-ozone-depleting.

**Brian Enos' Far Superior Slide-Glide** is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it. Slide-Glide Standard is for use in warm weather (F60°+), Lite is a thinner viscosity for lower temperatures (F30°+).

# DILLON RIFLE COMPANY

The OPAR Operator Trigger is a complete-assembly pre-stage drop-in trigger purpose built to provide improved trigger pull weight, reset, clean feel, precision, and safety for day-to-day users, military and law-enforcement members and agencies. The trigger's form enhances precision capabilities through its Area-of-Engagement design. This is accomplished by helping shooters build muscle memory for their trigger-finger placement in a simple and natural way.

It has a clean 5.0 to 5.5-pound trigger pull weight with a short trigger reset. The OPAR Operator's patent pending pre-stage trigger mechanism design has an inset secondary trigger providing an additional safety mechanism to reduce the chances of an accidental discharge. The OPAR Operator is compatible with AR-15 and HK416 rifles using the Mil-Spec 0.154-inch pins.

# If I Had...

# a Hammer!

**Though a striker-fired autopistol like the Glock 17 (bottom center) can be a superbly reliable firearm, when the time comes to pop hard primers, hammer-fired guns like the Wilson Combat EDC X9 (top left) or Sig P228 (top right) are much safer bets.**

**By Duane Thomas**

We seem to be caught in a cycle where, every four years, before and after the presidential election, we have an absolute feeding frenzy on guns and ammunition. This leads to ammunition becoming incredibly expensive, and even at times unavailable. This also extends to primers, which can be made of pure Unobtainium, or, when we can find them, they might as well be made out of platinum for as much as they cost. This means, though we all have our favorite brands of ammo, and our favorite types of primers, bottom line we run what we can find, and what we can afford. This frequently translates into issues with ignition reliability in striker-fired autopistols, in other words, when we pull the trigger, the gun goes click instead of bang.

A primer has three components: cup, anvil, priming compound. When a firing pin hits the primer, the priming compound is mashed between the cup and the anvil, causing it to ignite. At which point flame, pouring out through the holes in the anvil, thence through the flash hole into the interior of the cartridge case, ignites the gunpowder. We call primers with thin cups “soft” – because

they’re easily deformed, they easily dent under a firing pin’s blow, thus mash the priming compound between the cup and the anvil with a lot of impact energy left over to ensure reliable ignition. Primers with thick cups we call “hard” – because they’re not easily deformed, it takes a really vigorous firing pin strike to mash the priming compound between the cup and anvil with enough energy to ensure reliable ignition. Problem: foreign-made ammunition invariably has what we in America consider really hard primers.

Among primers, Federals are famously the most ignition-sensitive, therefore the most reliable in guns that have a tuned action. In such guns, the impact energy of the firing pin has been lessened as a side effect of lightening trigger pulls. In a hammer-fired gun, this would mean replacing the factory mainspring with a different mainspring of lighter poundage. In a striker-fired gun that would mean replacing the factory striker spring, likewise, with a lighter spring.

It is a sad truth – but a sad truth is a truth nonetheless – that striker-fired autopistols, like the Glock, Sig P320, Smith & Wesson M&P-series, etc. do not hit primers

nearly as hard as guns that have an external hammer, for instance the 1911, Browning Hi-Power, CZ-75, Beretta 92, Sig P220-series, etc. And I'm not talking striker-fired guns with lightened firing pin springs, I'm talking with the factory firing pin springs. Even at their best, striker-fired autopistols are not as ignition-reliable as hammer-fired autopistols, with hard-primered ammo.

Now, let me make what I just said really, really clear. I am NOT saying that striker-fired autopistols can't be reliable enough to bet your life on IF you can control the ammo that goes into the gun, and limit that to stuff with reasonably soft primers. Of course they can. I am saying that if you feed a striker-fired autopistol ammunition like, for instance, Sellier & Bellot (Czech Republic), Magtech (Brazil), PMC (South Korea), Fiocchi (Italy), MEN (Germany), Aguila (Mexico), Wolf (Russia), etc., you absolutely will begin getting failures to ignite.

When we begin talking hard-primered ammo failing to fire in striker-fired autopistols, let's be honest, what we're mostly talking about here is 9mm Parabellum. Foreign-made 9mm, depending on the manufacturer, of course, can be of high quality. But the bottom line is that foreign-made 9mm has harder primers than American-made 9mm. The reason for this is that, in America, we tend to view 9mm as primarily a handgun cartridge. Other countries don't have America's tradition of the ordinary citizenry owning handguns and carrying them concealed, thus they view 9mm as being a submachine gun cartridge. Subgun-only 9mm is loaded much, much hotter than standard-pressure 9mm, thus requires harder cups to prevent pierced primers. Such ammo works, and ignites, just fine in subguns because, being designed to fire it, they whack the living hell out of primers. Rather than have two different types of primers for subgun-only 9mm and 9mm loaded less hot, foreign ammo companies just use the same hard primers for everything.

This problem is not limited to 9mm, by the way. Foreign ammo companies tend to use the same small pistol primer for everything, whether it's 9mm or .38 Special match ammo.

Now, I'm sure that, somewhere out there in the world, someone is reading this and thinking, "I've put 150 rounds of [fill in the blank foreign ammo type] though my striker-fired autopistol and I've never had that problem." Well, I fire five figures worth of ammo a year, and I have.

While many of us would prefer to load our ammo with Federal primers, what can we do when we can't get

Federal? Or Winchester? Or CCI? Though we might prefer to be feeding our autopistols American-made ammunition, what do we do when all we can find to buy is foreign-made stuff? While we all have our preferences among ammunition and primers, during times of shortage we run what we can get, and what we can get is probably not going to be what, in a perfect world, we'd want to have.

While we all love our GLOCKS – well, not ALL of us, but many – if you want to be practicing enough to maintain your skill level during Ammogeddon, there is something to be said for having in your battery a hammer-fired 9mm. If you carry a gun, and you practice with it on a regular basis, you might seriously consider switching your carry gun, for the duration of the problem, over to

something with an external hammer.

As I said, I love my GLOCKS. But these days, were you to check out the holstered handgun on my body, you would be far more likely to find something like a Wilson EDC X9, a Beretta 92, a Sig P228, in other words a gun with an external hammer, than any of my striker-fired autopistols, for one reason, pure and simple: ignition reliability with pretty much any ammunition I can put into the gun.

# Ukrainian Guns *Continued from Page 19*

are forking over all the ordnance they can and it's working. We've done that too, but with great hesitancy. Leftist neo-Marxists in our land have neutered the Bill of Rights in their states, gutting the mindset that leads to free ownership and possession of arms – constitutionally protected property.

I've never discharged a shoulder-fired anti-tank weapon – it must be quite thrilling! Full autos? They're the cat's pajamas. And tough to admit, as my age advances, my ability to heft and use such implements of freedom is, hmm, diminishing. These battles are a young man's game. But that doesn't go for home preparedness, safety training at every level, shopping for a new something, "For my neighbors."

So here we are at a crossroads of some sort. The left hates guns but they're cheering on the gun-toting good guys. Now they love guns. Donations and support are up, helping equip people exercising their right to use arms defensively.

All the while, "news" media covers the carnage non-stop, squeezing out other reporting. It's what they do. Endless repeats of the same bodies and demolished buildings run incessantly. For good measure there are

no captions or voice overs describing what we're being shown. Just mind-numbing video loops.

Russian misinformation, and non-existent collusion with former president Trump to throw the election was abhorrent. And of course, it was a total hoax. Russians were never cast as a truly aggressive enemy, just a partisan player. Now that they're shooting people and blowing things up, so the left and its sycophant media are torn. Besides, communists are a good thing if you're a dedicated Marxist.

That's why the rest of us should be sweating about Russia and China shaking hands, with grand smiling faces of "She" (misspelled "Xi" by mass media) and Putin, eerily like Roosevelt meeting Chamberlain during WWII. Only now we face WWIII. Middle East terror states and even small-boy North Korea are salivating and piling on. The commies see their opening. Yikes! We live in interesting times.

# Scout Scope Mounts

Sorry, the optic pictured here is NOT included with the Scout Scope Mount.

Scout Scope Mounts provide an extremely stable optics base for your SAK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle	25374	\$79.99
Scout Scope Mount for SKS Rifle	25373	78.99

# John Marshall on Historic Firearms: John Wilkes Booth's Deringer Pistol

It was just one shot from a small single-shot muzzle-loading pocket pistol. And yet that shot was a pivotal event that shocked our nation profoundly. On the evening of Good Friday – April 14, 1865, only days after the Civil War had officially ended, United States President Abraham Lincoln was assassinated. A disgruntled Confederate sympathizer, a stage actor named John Wilkes Booth, used a .44 caliber pocket pistol to perform his foul deed. That pistol still exists today and is currently available to be seen in the Ford's Theater Museum in Washington DC. This is its story.

On that fateful night, President Lincoln and his wife Mary Todd Lincoln had decided to attend a performance of a comedy play, "Our American Cousin," at Ford's Theatre. They were in the company of 28-year-old Major Henry Reed Rathbone and his fiancée, Clara Harris. They were seated in a state box above and to the right of the stage. At that time, John Wilkes Booth, being a famous actor, pretty much had the run of the theatre and it was not unusual for him to be seen there. He had unfettered access to the back of the state box. The assigned presidential guard, John Parker, was unbelievably absent from

guarding the door to the box and might have even been sneaking a drink in a saloon at that time.

At about 10:15 p.m. Booth entered the seating area of the box from the corridor outside it to no one's concern. He quickly pointed his Deringer pistol at the back of the President's head from about six inches away. He could not miss at that range. At the report of the pistol, screams broke out. A later autopsy showed that the round lead ball from the gun had traced its way from behind Lincoln's left ear through his brain and had lodged just behind his right eye. Major Rathbone jumped up from his seat and began to wrestle with Booth. However, Booth dropped the gun and produced a knife, slashing one of Rathbone's arms. Still, Rathbone was able to push Booth to the railing of the box. In this confusion and struggle, Booth managed to vault over the railing, in the process snagging a leg in a draped flag as he fell onto the stage. He had broken the fibula bone of his left leg, but hurriedly limped across the stage, reportedly shouting in Latin "Sic Semper Tyrannis" (thus always to tyrants – the Virginia state motto). The assassin then escaped through the back of the theater to mount his horse that was held waiting for him. He quickly

rode away from the theatre with no one in pursuit.

The paralyzed and barely breathing President was carried from Ford's Theatre to Petersen's House, a boarding house with group of rental rooms just across the street from the theater. Dr. Charles Leale, who was in the audience at the theatre, went with him and gave him his best efforts. However, nothing could be done to reverse the inevitable consequences of the brain shot. Lincoln died in a bed there at 7:22 a.m. on the morning of April 15, 1865, about nine hours after being shot. He was in the presence of his family and some high-level political associates. Secretary of War Edwin Stanton is reported to have said "Now he belongs to the ages."

Twelve days after the assassination, on April 26, 1865, Booth was trapped in a burning barn near Port Royal Virginia by a host of Union soldiers. With Booth refusing to come out in spite of the fire and smoke, Sergeant Boston Corbett, disobeying Edwin Stanton's orders to bring Booth back alive, shot and killed the assassin.

Booth did not act alone. There were other conspirators involved with him. Four were convicted by a military commission and subsequently hanged in unison on the afternoon of July 7, 1865, at the old capitol prison that was located on the grounds of what is now Fort Lesley J. McNair in Washington DC. These people were Lewis Powell, George Atzerodt, David Herold, and Mary Surratt. Surratt was the first woman ever executed by the U.S. federal government. She owned the boarding house where they met and plotted.

The pistol that Booth used was recovered from the floor of the state box a short while after it was dropped by him and was preserved for evidence. It is unique and quite identifiable. In fact, a modern-era FBI forensics team matched it perfectly with old photographs which conclusively proved that the gun in the Ford's Theater Museum is the real McCoy. It was described by the FBI as a single-shot muzzle-loading percussion-cap-fired Deringer pistol manufactured by the Henry Deringer Company of Philadelphia, Pennsylvania. Notable features include a black walnut checkered stock, a barrel with an octagonal upper portion and a round lower portion, and an S-shaped trigger guard. There are gold and silver decorative inlays in both the metal and wood. It has engraved scrollwork on the sideplates, buttplate, stock tip, wedgeplates, front sight, escutcheon and flashplate. The trademark "DERINGER PHILADELPHIA" is stamped in two locations – the lockplate and on top of the breech plug. The butt of the grip has a compartment for a spare percussion cap. No serial number appears on it.

Because of the gun's age and historical importance, no FBI test firing was conducted to obtain fired bullet samples. The original round lead bullet that was fired into Lincoln's head had been removed during an autopsy in 1865 and was obtained for measurements and forensic matching. However, it was too disformed and oxidized to be of any value for that purpose. A bore casting with Mikrosil, a dental material, was made and it was determined that the barrel has seven spiral rifling grooves. The Booth Deringer, unlike most, has a left twist instead of right, but it's unknown how many others of that era shared this feature.

The pistol has imperfections and other characteristics that made it unique and matchable with old photos. There is a significant fracture in the forestock on the right side, and it shows a previous repair attempt. There are toolmarks in the barrel above the fractured portion of the stock and an S-shaped defect in the metal of the barrel that serve for identification. Also, variations in the shading and grain of the stock match perfectly with the old photos, as do stock swirl patterns and pit marks on the barrel.

The bore size is .44 caliber, and it was usual loading procedure to use a .41 caliber round ball for a projectile, together with a tight-fitting patch to secure it in place over the powder charge. The overall length of the pistol is 5.87 inches; the barrel length is 1.62 inches, and its height is 2.79 inches. The FBI recorded its empty weight as only 8 ounces.

Some controversies exist with respect to the pistol. The crack in the forestock is often attributed to the dropping of the pistol at Ford's Theatre, but the evidence of some attempted repair might show that it had this anomaly prior to the assassination. It's been postulated that since Booth was an avid horseman, the pistol might have been dropped from his pocket on cobblestones or other hard surfaces such as bricks while riding and the crack could have been caused in that manner.

Also, it's conjectured that a twin might exist for the pistol somewhere. Deringer pistols were often sold in matched pairs that were usually purchased for around \$25 during the 1860s. These pairs were custom works of high quality and had gold and silver inlays like the Booth example. Booth was a wealthy man, and it would have been probable that he secured a matched pair. If he did, does another similar pistol still exist?

History often leaves us important artifacts that when examined give us valuable insight to their times. Booth's Deringer pistol is certainly one of these and is a sad and classic example.

"It's conjectured that a twin might exist for the pistol somewhere. Deringer pistols were often sold in matched pairs that were usually purchased for around \$25 during the 1860s."

# Lyman Reloading Manuals

**Lyman 50th Edition Reloading Handbook**  
– Featuring More Loads, the Newest Components, Most Manufacturers, and More Load Data than Ever!

10330 \$32.99

# SAFARILAND®

## ENHANCED LIBERATOR HP 2.0

**Next Generation Multi-Mode Hearing Protection!**

**The Liberator® HP headset is the next generation in electronic hearing protection, offering crisp, clear audio in a durable, scratch-resistant, slim earcup.**

**26dB  
NRR**

- Three distinct hearing protection modes:
  - 1. ENHANCED MODE** – Blocks dangerous impulse noise, while enhancing nearby speech and audio.
  - 2. MOVE MODE** – Blocks all external noise.
  - 3. CLARITY MODE** – Blocks all external noise, while enhancing nearby speech and audio.
- Slim earcup design layered with sound barrier technology.
- High-definition speakers with enhanced electronics.
- Speed-change battery compartment works with either two AAA batteries or one CR123 battery.
- 160-300 hour run time (mode dependent).
- Easily converts to behind-the-head or helmet-mount suspension (available separately from Safariland).

Liberator HP 2.0, BLK	40197	\$299.99
Liberator HP 2.0, FDE	40198	\$299.99

### IN-EAR IMPULSE HEARING PROTECTION

**33dB Peak Impulse Reduction +  
13dB Continuous Reduction**  
**40195 \$19.99**

### FOAM IMPULSE HEARING PROTECTION

**38dB Peak Impulse Reduction +  
13dB Continuous Reduction or  
20dB Continuous Reduction in  
Full Block Mode**  
**18725 \$14.99**

## IMPULSE RANGE KIT

- **Foam Impulse Hearing Protection**
- **Ultra Compact Earmuffs**
- **HD Flex Protective Eyewear**

**38dB Peak Impulse Reduction + 13dB Continuous Reduction or  
20dB Continuous Reduction in Full Block Mode**  
**40196 \$39.99**
