ATTENTION DILLON CUSTOMERS: Because of changes to California's Proposition 65 that took effect on August 30, 2018, companies doing business in California are mandated to provide warnings on products that may expose Californians to any one or more of a list of approximately 900 chemicals, including Lead, which are "known to the State of California to cause cancer, birth defects or other reproductive harm." The new regulation states that a warning must be "provided in the catalog in a manner that clearly associates it with the item being purchased." Though we have no reason to believe our products could cause harm when used as intended, we now include the appropriate Proposition 65 warnings on some of our products to meet the California "safe harbor" requirements.

Dillon's Bill of Rights for Reloaders

All of Dillon Precision's customers have certain inalienable rights when they buy a reloading product:

- 1. Right of Quality** – YOU THE CUSTOMER have the right to expect a well-designed product, manufactured with quality materials and workmanship that does what the seller claims it will do.
- 2. Right to Test and Send-Back** – YOU THE CUSTOMER should have the right to test the product on your own reloading bench for at least 30 days, and if it does not live up to your expectations, send it back for a full refund.
- 3. Right of Service** – YOU THE CUSTOMER have the right to free, friendly, expert service and technical advice available through a toll-free phone number. This service should include prompt replacement of broken or bad parts – free of charge.
- 4. Right of Warranty** – YOU THE CUSTOMER have the right to a lifetime warranty on any non-commercial-grade reloading product you purchase. *Unfortunately, we can't offer this warranty on textile products and electrical or electronic components.*
- 5. Right to be Heard** – YOU THE CUSTOMER should have the right to speak to someone of authority anytime you can't get satisfaction through normal channels. If our sales representatives aren't able to help you, our supervisors have a mandate to take customer-satisfaction issues all the way to the owner of the company if necessary.

Editor's Note: The Bill of Rights for Reloaders is Dillon Precision Products' customer-satisfaction policy. It remains very much unchanged from the day the company was founded. The disclaimer about textile products and electrical or electronic components reflects the reality of how those products are produced in today's world. Ultimately, our founder recognized that satisfied customers are our best advertising, and the only thing that differentiated his company from all the others at the time was the warranty and customer service he offered.

We constantly strive to live up to his standards.
Please let us know if we're not succeeding.

All the electrical and/or electronic components of Dillon equipment and all Dillon textiles are covered by a one-year warranty from date of purchase. Any modifications performed to Dillon machines, or the addition of any unapproved equipment, including automated or mechanical add-ons from other manufacturers, is expressly not recommended and will void the Dillon warranty.

CP2000[^]

Dillon's DEDICATED Case-Processing Machine!

- Made in the USA
- Eccentric Roller Bearing Drive System
- Smoother Operation, Less Effort
- Higher Throughput, Lower Cost Per Case
- Heavier Frame for Greater Rigidity
- Seven Threaded Stations for More Flexibility
- Upgraded Primer Pocket Swager
- Primer Pocket Swage Available in Two Stations
- User-Replaceable Swage Rod Tip
- Reinforced Toolhead Bolt & Washer
- Improved Shellplate Indexing System
- Processing Speed up to 2000 Cases Per Hour

Designed to complement our RL1100 and Super 1050, the CP2000 offers higher speed, greater versatility and added case processing capability...all at a much lower cost than dedicating a RELOADING machine to prep brass! If you're loading mass quantities of ammo, the CP2000 will make your task MUCH easier.

Rapid Trim 1500 Case Trimmer[^]

Dillon's
RT 1500
shown
installed
on an
XL 650.

The RT1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1500 is equipped with a

quick-disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT1500 Case Trimmer **62164** is **\$425.00**. (Available only in 110 volt 60 hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, **13141**, are **\$25.00** each. Upper lock rings, **13559**, are **\$9.00** each.

MILITARY BRASS?

**Eliminate the "Grunt Work" with
Dillon's Super Swage 600**

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

Case Preparation Equipment

CV2001 – The Industry Standard

Dillon's CV2001 Vibratory Case Cleaner is one of the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour. Not only is our capacity greater than most, but our motor is also larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine! The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media. We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners. The solution was an injection molded reversible part. Simple, and it works great. Our device is large, 10" x 14",

Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench. It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon created the CV750 heavy duty Vibratory Case Cleaner for those with limited space. This case cleaner uses the same motor as the CV2001 and is every bit as tough – just more compact. To accompany the CV750, the CM500 does the same job as the larger CM2000 Case/Media Separator; and, like the CV750, handles just about half the capacity of the larger unit. Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Dillon's **D.C.L.** non-aerosol case lube is easy to use. Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

COPPER OUT. ACCURACY IN.

HODGDON CFE POWDERS. ACCURACY RUNS IN THE FAMILY.

Easy-metering Hodgdon CFE powders—three ways to extend hair-splitting accuracy between cleanups. One sure-fire way to prevent copper-fouling buildup for today's most popular pistol and rifle cartridges.

Setting Up Your Reloading Area

By Kenzie Fitzpatrick

Reloading can feel like a very daunting task when you think about everything at once. Just like buying gear, reloading is a process where you start with the basics and slowly add tools, bins, and gadgets that make reloading easier and organization better. What is essential starting out is to have a plan to set up your bench successfully from the beginning, so you have the layout and space you need to be successful. In this article, I will go over the layout of my bench, how I set up my wall space for quick access to the tools and supplies I need, and where I store my components.

Choose a Bench

The first step is to plan where your reloading machine will be mounted and whether you need to buy or build a bench for it. I have two benches set up in my gun room, one tall and not very wide, the other wide and lower to the ground. I chose the shorter bench for a few reasons. The most important reason is that the casefeeder would've touched the ceiling or not fit on the taller bench. A second reason is I like more room, not less, so the wider bench would give me more space to

work with. And finally, my Dillon XL750 is at the perfect height for me to pull the handle and see the shellplate comfortably.

Whatever bench you choose needs to be sturdy and stable, so your reloader isn't wobbling as you pull the handle. You will most likely have a scale, calipers, case gauge, and your bullet bin near the reloader, so having space for those items on the bench next to you is helpful. Make sure to account for the height of the casefeeder if you plan to use one in whatever room you plan to set up your reloader in.

Components Storage

Many people don't think about how they plan to store and organize their reloading components. Without a plan for storing components, finding what you're looking for can be chaos once you start. I've seen some people use filing cabinets or toolbox drawers to store primers. I've seen just regular wooden shelves stacked with primers. I have mine stacked under my XL750 on a shelf that is built underneath my bench. However you choose to store primers, ensure they are kept in a cool, dry place, nowhere near oils, cleaning solvents, or water.

These days, your favorite powder may be hard to find. Occasionally, you'll be able to buy in bulk and find the big jugs of powder you've been looking for, while other times, you can only get your hands on one-pound containers. You might also start experimenting with different powders to have several loads that work well for whatever guns you're loading for. It's a good idea to organize powders based on what ammunition load it's used for and keep all the same powder containers together to find them more easily. Like primers, powder should be stored away from solvents and water, and it's also a good idea to make sure nothing is stored near a heat source or flammable objects. **(Pro Tip:** When you fill your powder measurer with powder, use blue painter's tape to write what powder is in the powder measure, so you'll remember later on. Believe me, you'll forget if you switch between loads and powders.)

Bullets are not fun to pick up and store in high places, especially if you're like me and buy in bulk. Each bullet manufacturer sends bullets a little differently. Berry's Bullets have containers they come in labeled with what caliber and grain weight they are. Precision Delta ships their bullets in secured boxes stamped with the caliber and grain weight and the type of projectile on the outside of the box. Montana Gold bullets are shipped in secured and reinforced boxes, with a label on the outside of each one with the bullet type, caliber, and grain weight on it. Personally, I keep the bullets in the boxes and containers they come in, but I have seen reloaders store bullets in storage containers, trays, and jars. The biggest thing to be aware of is to avoid mixing up the same-caliber bullets with different grain weights.

I use my XL750 to load .40 S&W and 9mm major ammunition, so I have a conversion kit, a whole separate toolhead, and a powder measure to switch between loads. Once you screw in your dies on the toolhead and get them set up to your load, the last thing you want to do is unscrew them and repeat that process again in the future. Swapping a toolhead is as simple as removing the two retaining pins, sliding off the toolhead, and putting the new one on.

Wall Rack or Inline Rail System

I use my gun room for more than reloading. I build and tinker with rifles, clean guns, install parts and ac-

cessories on firearms, and store everything I need for competition shooting. I have a very small space to work with, and I quickly learned that I needed to utilize more than just storage bins, toolboxes, and floor space to make the space work for my needs. I decided to purchase wall pegboards that I could customize with accessories such as hooks, baskets, bins, shelves, and more. I set up one wall rack to the right of my reloading machine that allows me to have quick access to anything I need for reloading. I use mostly bins and shelves to store spare parts, tools, case gauges, and more.

Another reloader option is installing an InLine Rail™ Wall mount organization system from InLineFabrication.com.

This system acts as a rail with various attachments you can add to the rail to store things you need right behind your bench. They make trays, bins, shellplate holders, powder-measure docks, and more. Companies like RangePanda.com also make 3D-printed mounted accessories that are compatible with the InLine Rail™ Wall system. These days, reloading is so easy because of all the technology, gadgets, and aftermarket support there is.

Brass Cleaning Area

Cleaning brass is one aspect of reloading that is best done outside or in a garage where it's possible to ventilate. When cleaning brass, wearing gloves and a respiratory mask is a good idea. Reloading does have the risk of lead exposure, especially when handling dirty brass. I store media in 5-gallon buckets for when I do a batch load of cleaning brass. I also keep spent brass in 5-gallon buckets and clean brass in separate 5-gallon buckets. I always sort brass straight from cleaning it with media into the correct-caliber bucket. I use gorilla rack shelves to store my dry tumbler, media

separator, and buckets of brass. I store the brass inside, so it doesn't tarnish due to the humidity and temperature swings in a non-temperature-controlled room.

When you begin to reload, you almost have to learn how to be an organized person, even if you aren't in everyday life. This is especially true if you plan to reload multiple calibers on one progressive reloader. A label maker is one of the best tools you can buy as part of your reloading setup. No matter what it looks like, creating any sort of system that works for you will make reloading life easier.

**"What is

DILLON RIFLE COMPANY

The Tucker Rifle Case

This fine specimen is made with top-shelf materials that combine a classy composite quilting pattern with a rugged, laminated cotton and waterproof outer shell. The suede-like interior is adorned with fully adjustable hook and loop retention straps to keep your weapon in place at all times. It features a solid hook and loop inner spine that allows for quick attachment/detachment of the DRC Pods (sold separately). In our opinion, it has the best of both worlds, beauty and brains, what we like to call a bonafide stunner.

The Jalapeño

You shoot a lot and your gun gets hot. Then, without thinking about it, you put your rifle into its case or someplace else equally tender. I have mauled several rifle cases, burned a car seat, and have at least one scar from doing exactly this. This is why we created The Jalapeño. Actually, we made the original The Jalapeño for the Minigun. With it, we could dump 3000 rounds in a minute or so, slip The Jalapeño over the barrel group, pull the gun off the mount and stow it right away.

COLD STEEL KERSHAW

Cold Steel Kukri Machete – The extra wide blade is black powder coated with a baked-on anti-rust coating. Made from heat treated 1055 high-carbon steel. The full tang is completely injection over molded with a fine-textured high-impact polypropylene handle that will not shrink, warp, tarnish or rot. Fast and lively in the hand, and wide enough to chop through smal vines or saplings, clear brush and perform in many survival or bushcraft duties. Blade Length: 13 in. Overall Length: 18.375 in.

#11851 \$39.99

Kershaw Camp 10 – Kershaw Camp Series knives are ideal for clearing paths, cutting through brush and brambles, making kindling, removing and breaking down branches, cutting fodder for livestock, breaking down brush piles, and for a wide variety of tasks around the campsite. Includes glass-filled nylon sheath with gear straps and belt loop. Blade Length: 10 in. Overall Length: 16 in.

#55012 \$59.99

Mr. Bulletfeeder[®]

by Double-Alpha

Mr. Bulletfeeder has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy – a world leader in practical-shooting-related product manufacturing and distribution – at the helm. The design allows the bullet collator to be mounted onto the casefeeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

On the Cover

James in Iraq as an explosive-detection canine handler.

Meet James Marconato Control Your Leash – Marconato Dog Training By Kimmie Dillon

This month's cover features a few additional "models" that you aren't used to seeing. Besides our beautiful model Alyssa, Capris and Rokko are enjoying their first appearance on our monthly **Blue Press** cover. Capris (left) is a Belgian Malinois and Rokko (right) is a half Shepherd and half Belgian Malinois, aka a Shep Malli.

Their trainer, James Marconato, utilizes our Dillon Precision headquarters occasionally to train his working dogs and keep their senses finely tuned. His extensive canine training experience includes serving as a contractor in Iraq for 10 years with the World Protection Security Defense and 21 years in law enforcement working and training patrol/detection dogs.

KD: James, we always look forward to welcoming you and your working dogs for training at our facility. The dogs are so incredibly majestic! They can also literally save lives. Do you have any stories to share?

JM: Yes – while deployed in Iraq, my bomb dog saved me by alerting me to a vehicle when conducting sweeps at a military checkpoint. Another incident was when a mortar round hit the compound but did not explode. I was called out and attached with the Emergency Response Team to conduct an area search of the compound. Myself and my K9 partner located the mortar round in an open 30-acre field.

KD: These dogs are literally heroes! Besides training working dogs, you offer all types of training for our four-legged friends.

JM: The dog training business that I provide is to

private clients who have either rescue dogs or just all types of mixed dogs. My business name is Control Your Leash – Marconato Dog Training. I train full obedience, no lunging or jumping while walking your dog and no barking at other dogs while walking. For those clients that hike or live on an acreage property, I also offer rattlesnake awareness training for your dogs. My other business I own and operate is called Law Dogs Security Services LLC. I conduct explosives sweeps for sports events and concerts.

KD: You are one busy man! What is your philosophy for connecting with dogs?

JM: My philosophy is, you need to have patience with dogs. Enjoy the time when you train the dogs and make the dogs have fun. Offer lots of love and joy.

KD: If our **Blue Press** readers are looking for service dogs, are their specific breeds that you prefer?

JM: I recommend the Belgian Malinois. This breed has a high drive for working! They are service patrol/detection dogs and are very social and smart. They will work until their last breath!

I always give a comparison example between a Shepherd and a Mal. A Shepherd is an Air Force dog – very intelligent and will think about it first before attempting to run into a burning building! A Malinois is a Marine dog and will just go in the burning building with no questions asked!

James, thanks for loaning us our furry models for this month's cover issue!

If you would like to contact James for dog training:

PRIMER FLIP TRAY

A heavy, high-quality tray large enough for the Federal primer package. 13606, \$27.00 ea.

Dillon's Range Bag[^]

33389 \$139.99

Borrowing design features from Dillon's original range bag, but with upgraded metal D-rings and clips for the shoulder strap, Dillon's "Retro" Gray Range Bag is constructed of heavy-duty ballistic nylon.

The primary compartment measures 14-1/4" x 7" x 8" and features two interior pockets measuring 6-1/2" x 6-3/4" with hook-and-eye closure flaps. An additional interior pocket measures 5" x 7-1/2".

The top cover can be quickly secured via hook-and-loop strips at the end or by two side zippers.

There are two zip-up outer compartments measuring 12" x 8" x 1-1/2". One of the outer compartments features extra padding for carrying a handgun, and the other has an external zippered compartment for pens, pencils, etc.

"Border Shift" Ammo Bag[^]

Dillon's two-compartment ammo bag is constructed with a flexible inner liner that will allow the entire volume to be accessible from either zippered opening. You'll never again mix fired brass with loaded rounds!

A heavy, high-quality tray large enough for the Federal primer package. **13606, \$27.00 ea.**

New-Reloader XL750 Package

You've made the decision that loading your own ammunition is right for you. You're ready to pull the trigger, but uncertain of exactly what you need. Dillon has taken the work out of this.

We have assembled a New-Reloader Package, featuring our XL750 reloading machine, with the most popular machine options, along with the accessories you'll need to begin reloading immediately.

This package is available in 9mm, .223/5.56mm, or BOTH.

9mm 750 Package:

XL750 in 9mm
9mm Die Set
Bench Wrench
Small Pistol Casefeeder
XL 750/650 Strong Mount
Bullet Tray Kit
Roller Handle
9mm Case Gage
D-Terminator Digital Scale
Primer Flip Tray
4 Small Primer Pickup Tubes
Digital Calipers
The Complete Reloading Manual for the 9mm Luger

NEW 750 PACKAGE 9: \$ (Please Call)

.223/5.56mm 750 Package:

XL750 in .223/5.56mm
.223/5.56 Die Set
Bench Wrench
Small Rifle Casefeeder
XL 750/650 Strong Mount
Bullet Tray Kit
Roller Handle
.223/5.56 Case Gage
Dillon Case Lube
D-Terminator Digital Scale
Primer Flip Tray
4 Small Primer Pickup Tubes
Digital Calipers
The Complete Reloading Manual for the .223 Remington

NEW 750 PACKAGE 556: \$ (Please Call)

Combo Package (.223 Conversion Pictured at Right) Includes the 9mm Package Above, Plus:

.223/5.56 Conversion Kit
.223/5.56 Die Set
XL750 Quick Change
.223 Case Gage
Dillon Case Lube
Small Rifle Casefeed Plate
The Complete Reloading Manual for the .223 Remington

NEW 750 PACKAGE COMBO: \$ (Please Call)

**New-Reloader Package,
XL750 9mm**

Combo Package .223 Conversion

Dillon Die Sets

Sizing/Depriming Die (Pistol)

Our sizing/depriming dies feature a “floating decap assembly” with a snap spring that throws the spent primer off the pin and eliminates the primer “draw back” that often occurs when decapping military brass. The primary feature of Dillon’s size die design is the long, tapered carbide ring with a radiused opening. That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that’s still only a part of the story.

Bullet Seating Die (Pistol)

Our quick-disassembly seat die allows the user to disassemble and clean the seating die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We’ve incorporated a “flip-flop” seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem. Dillon’s double-ended design makes it simple to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time.

Crimp Die (Pistol)

We’ve made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you’ll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

Package of 10	21528	\$8.00
---------------	-------	--------

Sizing/Depriming Die (Rifle)

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for “squeak-free,” effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die (Rifle)

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die (Rifle)

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today’s marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

BL550[^]

Dillon's Basic Loader

\$395⁰⁰

15399

Reloading Dies and Caliber Conversions sold separately

Pictured with optional accessories:

Strong Mount 22051 \$95.00

Dillon's RL550 has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles. The BL550 is essentially an RL550 without the automatic priming and powder systems.

Capable of loading over 160 calibers – just like the RL550 – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL550 loader! The interchangeable toolhead (Page 25) makes it quick, easy and inexpensive to change calibers.

AUTO PRIME SYSTEM[^] 16627 \$120.00

PRIMER SYSTEM EARLY WARNING[^]

Allows you to focus on loading instead of worrying about failing to seat a primer, and is an easy slip-on attachment to the auto prime system. 20302 \$37.00

AUTO POWDER SYSTEM[^]

Accurate to within 0.1 grain, our Automatic Powder Measure is world renowned for its charge-to-charge consistency. 20251 \$130.00

OPTIONAL MAGNUM RIFLE POWDER BAR

21353 \$45.00

AUTO EJECT SYSTEM[^]

Greatly increases your ammo production capabilities and adds a Cartridge Chute/ Bracket and a Cartridge Bin to your reloader. 22120 \$43.00

BL550 POWDER DIE[^]

Extra powder dies for your BL550 make it easier to set up additional toolheads for loading different calibers.

Powder Die: 16629 \$27.00

Oversize Die: 16626 29.00

Plastic Funnel: 16617 9.00

POWDER MEASURE ADAPTER

If you load rifle cartridges with long-grain extruded powder, you can now use any manufacturer's powder measure with 7/8" x 14 threads on your RL450, AT500, BL550 or RL550. (Requires the use of an RL450 powder die – see below.) 20029 \$32.00

RL450 Powder Die 20308 32.00

DILLON RIFLE COMPANY

The OPAR Operator Trigger is a complete-assembly pre-stage drop-in trigger purpose built to provide improved trigger pull weight, reset, clean feel, precision, and safety for day-to-day users, military and law-enforcement members and agencies. The trigger's form enhances precision capabilities through its Area-of-Engagement design. This is accomplished by helping shooters build muscle memory for their trigger-finger placement in a simple and natural way.

It has a clean 5.0 to 5.5-pound trigger pull weight with a short trigger reset. The OPAR Operator's patent pending pre-stage trigger mechanism design has an inset secondary trigger providing an additional safety mechanism to reduce the chances of an accidental discharge. The OPAR Operator is compatible with AR-15 and HK416 rifles using the Mil-Spec 0.154-inch pins.

Shooting Mat

Dillon's shooting mat is made of tough ballistic-weave nylon fabric, with a large skid-resistant elbow pad area. The "ground" side is moisture resistant and wipes clean easily. The padding is dense, closed-cell foam to provide both shooter comfort and a stable shooting base. The mat is equipped with a shoulder strap, a carry handle and two straps with snap-release buckles.

Dillon Reloading Accessories

A Strong Mount increases your machine's "footprint" to over 10", spreading the load over the whole bench instead of stressing the leading edge. For XL 750/650 owners with limited overhead clearance, the XL 750/650-only mount raises the machine 6" above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL550/XL750/650	22051	\$95.00
XL750/650-only	22052	93.00
"SDB"	22223	105.00

These plates bolt directly to your bench top, and are drilled and tapped to allow mounting your reloading machine directly to the top of the mounting plate.

Stock #62005, \$95.00 is for:

XL 750, XL 650, RL 550 and Square

Deal B. **Stock #62006, \$95.00** is for:

RL1100, CP2000, Super 1050 and RL1050 as well as *any* Dillon reloading machine that is mounted on the Dillon Strong Mount.

Our **Bullet Tray** is a simple, shallow aluminum tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL550 and XL750/650 when equipped with the RL550/750/650 Strong Mount, and a separate kit is available for the RL/Super 1050.

Bullet Tray Kit	22214	\$60.00
1050 Tray Kit	22215	60.00

The **Low Powder Sensor** provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

16306	\$52.00
--------------	----------------

Our **Toolholders** are available for your reloading machine and ensure that the tools you need to service your reloader are handy and organized. No more digging around your bench trying to find the right size hex wrench!

XL650 with Wrench Set	11555	\$44.00
RL550/XL750 with Wrench Set	11541	42.00
SDB with Wrench Set	19441	41.00

Note: Super 1050 Toolholders include Wrench Set

1050 with bracket	62202	50.00
1050 w/o bracket	62203	45.00
One-Inch Bench Wrench	10842	15.00
SDB-Only Wrench	19970	16.00

Color Coded Aluminum Toolheads for the RL550 and XL750/650 make it easy to tell at a glance which caliber you're set up to load.

Gold RL550	62134	\$45.00
Blue RL550	62132	45.00
Black RL550	62133	45.00
Gold XL750/650	62138	50.00
Blue XL750/650	62136	50.00
Black XL750/650	62137	50.00

The **Square Deal B Toolhead Stand** holds your SDB toolhead, powder measure, dies and caliber conversion components (*not included*) in an orderly manner.

62225, \$45.00

Our **Toolhead Stands** for the RL550 and XL750/650 are the ultimate in convenience for keeping your reloading bench clean and uncluttered.

22055, \$29.00 each

Dillon's **1050 Toolhead Stand** is now available to store caliber quick changes for the 1050.

62200, \$58.00

Equipment **Dust Covers** are made of tough packcloth nylon and add security to your loading bench. Your reloader will be protected against more than dust as the machine covers come with a D-ring that allows the heavy duty zipper to be locked.

SDB/550 Cover	13795	\$24.99
XL750/650 Cover	10443	39.99
1050 Cover	13239	39.99
Master lock	13083	4.99
Pictured: SDB/550/650/750 Quick-Change Cover (for use with powder measure)	11143	\$14.99

Our **Primer Flip Tray** is a heavy, high-quality tray large enough for the Federal primer package.

13606, \$27.00 each

Primer Pick-Up Tubes are used to transfer primers from flip tray to priming system. Having extras pre-loaded with primers makes it easy to load a pre-determined amount of ammo without having to stop to pick up primers.

1 Large	22029	\$10.00
1 Small	22028	10.00
2 Small, 2 Large	20056	35.00
4 Large	20050	35.00
4 Small	20049	35.00

"D-TERMINATOR" Electronic Scale

- 1500 grain/100 gram capacity
- Accurate to 0.1 grain/0.01 gram
- Uses four AA batteries (included)
- Comes with its own AC adapter
- 100g scale check weight included

NOTE: Dillon electronic scales are covered by a one-year warranty from date of purchase.

\$149.99
10483

Dillon's **"Belted Magnum" Powder System** features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

97126 \$205.00

The **Powdercheck System** (available for XL750/650 and Super 1050 reloading machines) sounds an alarm if the powder charge in a round is out of limits either high or low.

21044, \$93.00 each

An **Aluminum Roller Handle** gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

17950 \$64.00

Dillon's **1" Bench Wrench** fits our 1" Die Lock Rings which give you more space on the toolhead.

10842, \$15.00 each

Our **Machine Maintenance Kits** come with everything you need to keep your Dillon loader cleaned and lubricated up to factory specifications. Available alone or in combination with a spare parts kit for your machine.

Maintenance Kit Only	22211	\$38.00
w/SDB Spare Parts Kit	97015	57.00
w/550 Spare Parts Kit	97016	58.00
w/750 Spare Parts Kit	97500	70.00
w/1050 Spare Parts Kit	97018	75.00

RF100 Automatic Primer Filler

The **RF100 Automatic Primer Filler** eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run! In about two minutes the primers are inside the protective metal housing.

Large Primer Filler	97077	\$449.00

(Incl: RCBS steel size, expander, seat/crimp)		

Lyman Neck Expander Die

Improves accuracy of cast and jacketed bullet reloads. Extends case life. A "Must-Have" die for the cast bullet or flat-base bullet user. The first step expands the inside of the case neck to just under bullet diameter for precise case neck tension in the finished reload. The second step expands the case mouth to bullet diameter or slightly over. This allows the jacketed or cast bullet to be started perfectly centered in the case mouth and properly aligned with the axis of the case neck. By adjusting the

plug slightly deeper, the second step also provides a slight flaring of the case mouth for reloaders using cast bullets.

Dillon AkroBins[^]

AkroBins are ideal for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550/XL 650/750 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Handling components, ammunition, cleaning firearms or discharging firearms in poorly ventilated areas may result in lead exposure. Have adequate ventilation at all times and wash your hands thoroughly after exposure.

Shellsorter

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

The ASI Hand-Sized Pistol Championship 2022

Action Shooting International President and Co-founder Sandy Wylie helps keep Hand-Sized Pistol Championship competitors cool in the 103-degree heat with a snow cone machine.

By Duane Thomas

Action Shooting International (ASI) has a series of what might be called “specialty matches” that run once a year. A favorite of mine among those is the Hand-Sized Pistol Championship. I have managed to shoot every HSPC thus far, and this year was no exception.

Hand-Sized rules are meant to encompass “the sorts of guns real people really carry.” Because it’s a well-known fact that no one carries a full service-sized handgun concealed on a daily basis. Heavens, the very idea. Thus, in this match, revolvers are limited to barrels of 3” or less; for autopistols it’s 3-1/2”. Each stage must start with no more than six rounds in the gun, and every spare ammunition carrier, to handicap, I mean ensure a level playing field between autopistols and revolvers. (Does anyone carry six-shot revolvers anymore?) You could shoot the match with a non-Hand-Sized handgun – it’s not like they were going to turn you away at sign-in

– but if you did, your score didn’t count for placement in the Hand-Sized match.

On match day, the temp was 103 degrees. By Washington state standards, that’s hot. People who live in, let us say, Phoenix are reading this and snickering over the idea that 103 is “hot,” but Washingtonians do not, as a general rule, handle heat well, we’re too used to having SANE weather.

ASI President Sandy Wylie, perhaps seeing the hand-writing on the wall, or rather the thermometer, actually rented a snow cone machine, and was there personally making tasty cold treats for people. I only had, like, eight myself. It helped.

The past three years in the HSPC, I have shot the GLOCK 42 that frequently serves as my backup gun. I figured I should shoot at least one match a year with my BUG. And I did pretty darn well with it, finishing up in the single digits every year. This year, I decided to game things a bit by

shooting a gun that pushed the limits of what's allowable under Hand-Sized rules: a 3-1/2" compact 9mm 1911. With a mag funnel and a control layout the dimensions of which mimic a full-sized 1911 (despite the overall smaller size of the gun, the magazine release button, slide stop, etc. and their relationship to each other are the same as on a full-sized gun), how could I fail to place higher, versus firing that teeny little G42 pocket rocket?

Bottom line, I failed. While putting together this gun, I foolishly outfitted it with a set of grips that could only be described as "slick." I thought I could compensate

for that with technique. I couldn't. I dropped a LOT of points in this match, due to the gun twisting in my hands under recoil. At the finish line I place 25th out of 78 Hand-Sized competitors. Lck.

And the moral of the story is two-fold: (1) Slick grips suck; traction matters. (2) God punishes gamers.

And that's why we compete in matches, it's a wonderful laboratory to test ourselves and our equipment. Sometimes that validates what we're doing is right, and sometimes it lets us know what we're doing is wrong.

I can't wait to do this again next year!

CED Edge Dual PCC Rifle Case

The CED Dual Rifle case gives you two in one! Two rifles and three modes of carry, all in one great PCC rifle case. Excellent protection for your expensive competition PCC and AR rifles, this case includes storage for two pistols and lots of magazines as well.

Comes with a handle, shoulder strap, and

backpack-style shoulder straps, which tuck away when not in use or can be removed if not needed.

The MOLLE PALS system across the front of the case, allows the user to add optional accessory cases to the rifle case itself.

The case measures 35.43" x 11.81" inside the main compartment.

10977 \$99.99

CED PCC Mag Storage Pouch

The perfect companion for your range bag, rifle case or backpack! Holds up to six extended PCC straight magazines of up to 42 rounds and can accept magazine lengths up to 10 inches.

Measurements are: 12.75" Wide x 11.5" High closed (open approximately 12.75" x 19.0"). The pouch pocket length is 6.25."

10978 \$15.99

CED PCC Rifle Sleeve

The CED PCC Rifle Sleeve is the ideal companion for competition stage use. It's a lightweight, water-resistant neoprene zippered sleeve that folds up easily to fit into a range bag or backpack. Perfect for covering and protecting your PCC rifle when carried in a trolley or wagon at the range. Weighs only 8 ounces and measures 33" inside.

MAGPUL PMAG Drums

MAGPUL's PMAG drum magazines are durable, lightweight, highly reliable and made in the USA. The unique drum configuration keeps the height of the magazine manageable and allows for prone firing and easier storage. Features an easy-to-use loading lever, paint pen dot matrix for easy marking, and a rear window for instant capacity indication.

Regarding GLOCK pistol version: It is recommended that you install a new OEM magazine release on Gen 1-3 GLOCK handguns to support the extra weight of the magazine. Gen 4 GLOCK handguns will require an aftermarket metal magazine release. Installation of a new recoil spring assembly to ensure reliable feeding is strongly recommended. Individual variations between firearms may result in an extra power recoil spring being required. Use of the D-50 GL9 in pistol caliber carbines (PCC) is not recommended, because the increased length of the feed tower will be partially unsupported in most pistol caliber magazine wells. This unsupported condition may cause premature wear on the feed tower magazine catch, and (in firearms which deviate from factory magazine well specifications) may result in improper round presentation and failures to feed.

All-in-One Torque Driver Kit

Featuring the Fix It Sticks All-in-One Torque Driver. Tighten down your scope rings, mounts, actions screws, etc. while in the field, at the range, or at home. Kit includes: All-in-One Torque Driver (15 - 65 inch lbs); T-Way T-Handle Wrench; 15 different bits: T10, T15, T20, T25, [hex 3/32, 5/64, 1/8, 5/32, 3/16, 2.5mm, 3mm, 4mm, 5mm], P1, slotted #5; 1/2" Socket and 1/4" bit adapter set; and Zippered case with Molded Holder.

29835 \$112.00

Replaceable Edition Shooting/Hunting Kit

This kit offers unmatched portability, functionality and versatility. Two Fix It Sticks (which combine to form a T-Handle) and 16 bits are held in a molded bracket for portability/storage. Extra room on each end can hold two additional bits. Includes two sticks, bracket, and 16 different bits: 2.5mm Hex, 3mm Hex, 4mm Hex, 5mm Hex, T-10, T-15, T-20, T-25, T-30, 1/8" Hex, 5/64" Hex, 3/32" Hex, 5/32" Hex, 3/16" Hex, Slotted #5, and Phillips #1.

29843 \$40.00

Mini All-in-One Torque Driver

Tighten scope rings, red dot sights, mounting plates, etc. Just turn the drive handle until the hash mark lines up with the torque value you need (from 6 - 25 inch-lbs).

29837 \$55.00

All-in-One Torque Driver

Tighten scope rings, mounts, action screws, etc. Just turn the drive handle until the hash mark lines up with the torque value you need (from 15 - 65 inch-lbs).

29836 \$60.00

Scope Bubble Level Set

Level your optics with machined aluminum levels, featuring precise UK-sourced bubble vials. Kit includes: Magnetic level, NATO/Pic rail level/anti-cant device, and Protective foam carrier with pouch.

29839 \$50.00

Scope Jack

A new way to level your optic, the Scope Jack works with any 1/4 inch driver to quickly and easily level your scope to your NATO/Pic rail. Just mount the Scope Jack to the rail under your scope and turn the drive handle until the lifting arm engages with the flat section under your turrets. Once the scope is level, maintain pressure while tightening your ring screws to keep optic level throughout the process.

29838 \$44.00

Bolt Carrier Group Scraper

Custom bit that is designed to clean carbon off the various surfaces of the Bolt Carrier Group. Works with any standard magnetic 1/4" driver. Black Isonite finish for increased corrosion resistance and strength.

AR-15 (Top) 29840 \$10.00
AR-10 29841 \$10.00

Glock Tool Kit

Glock tool kit including two custom bits designed to aid in the assembly and disassembly of Glock Handguns / Front Sights. Includes: *Glock Front Sight Tool*, a 3/16" Hex Thin Wall Nut Driver - Integrated magnet holds the screw securely in place. Machined from Solid Steel Bar Stock. Works with any standard 1/4" bit driver. 3/32" Metal Pin Punch - Punch is sized to ensure easy removal of all Glock pins by hand. Machined from Solid Steel Bar Stock.

29842 \$16.00

Remington Bolt Opener

Access your Remington 700 firing pin quickly and easily in the field with our compact custom bit. Levers the firing pin head with a "bottle opener" action. Molded synthetic polymer bushing protects bolt plug from damage.

29844 \$20.00

Master Sight Pusher™

The Real Avid Master Sight Pusher is a professional-grade tool that makes quick work of changing pistol sights while protecting both gun slides and the sights themselves. Heavy-duty, built to last and smartly designed to work on most any modern pistol sights. The oversized, ergonomic Easy Torque™ Handle partners with extra-fine drive threads to provide maximum torque with minimal effort when removing or installing sights. The Universal Press Block features multiple contact surfaces for almost any size and style of press-fit dovetail slots and sight profiles. Adjustable non-marring contact surfaces securely hold both 1911 and flat-bottom pistol slide styles.

Master Sight Pusher

KynSHOT

Hydraulic Recoil Buffers

The KynSHOT™ hydraulic buffers reduce recoil, muzzle rise and shoulder fatigue allowing for quicker target acquisition after the trigger is pulled. In addition, the KynSHOT buffers control the bolt carrier group operation thereby reducing excessive wear and tear on the mechanical cycling components.

KynSHOT hydraulic buffers are manufactured with premium seals, materials, and components in an aerospace grade manufacturing facility that is dedicated to quality. Each and every one of our product designs have undergone extensive impact, functionality, and life testing to ensure unmatched performance. This results in a product that can withstand and perform in harsh environments, including temperatures from -30°F to 150°F. The patented design and damping technology make the KynSHOT buffers the industry leading recoil mitigation buffer.

Double Duty TDU®

Trainer

Operator

The Double Duty TDU® belt is metal-detector friendly and offers two color options. Both the Trainer and Operator belts feature 6,000-pound-test buckles and heavy, reinforced stitching, therefore can be quickly converted into secure tie downs, secondary carry straps or emergency harnesses. All 5.11 tactical belts are made of strong nylon webbing and provide a stable support for carrying firearms and accessories. According to 5.11 Tactical, belt sizes run small, so they recommend you order one size up for the best fit.

BLADE-TECH™

The Blade-Tech Ultimate Carry Belt by Nexbelt is specifically designed for those who carry a firearm daily for personal defense. The PreciseFit ratchet system allows you to quickly tighten or loosen the belt in 1/4" increments up to 6" for the perfect fit – no matter how you carry. Rest assured, this will be the most comfortable and fastest adjusting belt you will ever own. The Ultimate Carry Belt has a water-resistant backing that helps prevent moisture from penetrating the outer surface and allows for extra strength and durability. **One size – adjusts to fit all.**

Comtech's STINGER

THE STINGER: Comtech's own personal defense device. Designed to act as a "force multiplier," it's like having the punching power of a karate master – instantly! There's really nothing like it for easy carry and access. It passes un-noticed by 90 percent of people who see it. Yup, just another "keychain device" to most, and yet it works so well when needed. You deserve a Stinger!

19495 \$9.99

BLADE-TECH™

"Signature" OWB Holster

Over the last 21 years Blade-Tech has been dedicated to perfecting the OWB holster. In collaboration with industry leading polymer experts, Blade-Tech created an incredibly strong proprietary blend of polymers, that allowed them to precision mold the "Signature OWB holster" with extreme accuracy for a perfect fit every time! Features a positive lock trigger guard, adjustable retention screws and Tek-Loc™.

Large Tek-Loc™ Universal Belt Clip
40029 \$12.99

This holster is designed for an extreme high rise carry and offers the best of both worlds. Not only does it allow you to carry a full-size automatic handgun, it's also totally concealable. The unique design has Mernickle's patented stabilizer flap that goes behind the belt. This prevents the grip of the gun from tipping away from the body while doing daily activities. The high-rise position allows you to sit in chair or vehicle without needing to take the gun out of the holster.

XHR 1911 Holster **19018 \$99.95**

Designed to be the ultimate in concealed carry for those not comfortable with an Outside the Waist Band (OWB) holster – the ISP offers a great carry solution! This holster gives the appearance of a front pocket wallet and breaks up the outline of your gun. The smooth Herman Oak leather inside protects the finish of the gun, but the suede outside ensures that the holster sticks in the pocket.

Home Defense Storage Options

How To Safely Store Your Firearms

By Maureen P. Sangiorgio – NRA-Certified Firearms Instructor/Range Safety Officer

It may surprise you to know that about 4.6 million children live in homes with unlocked, loaded guns. According to healthychildren.org, roughly one-third of U.S. homes with children have guns. That's a scary statistic when you think about the fact that even young toddlers are capable of finding unlocked, loaded guns in your home, and can pull the trigger. The studies are clear – there is a decreased risk of suicide among adolescents when guns are stored safely.

That's one of the many reasons why it's critical to learn how to safely store your firearms at home so they can be quickly accessed in case of a self-defense situation, yet away from unauthorized users. Read on to find out more about safe firearm storage practices, listed from least expensive up to most expensive.

Trigger Locks

Trigger locks come in various shapes and designs, and they work by filling in the space and clamping down around the trigger or trigger housing area to prevent someone from squeezing the trigger, firing the gun. The good news is most new guns come with trigger locks right in the box, saving you time, effort, and money. The bad news: be very careful when handling them because they come in direct contact with the trigger, so they should never be used when the gun is loaded.

Priced at around \$20, trigger locks are also available free of charge in some areas through Project ChildSafe, an initiative to promote gun safety. (<https://projectchildsafe.org/>)

Another type of lock that comes with most firearms today is cable locks. These types of locks work by

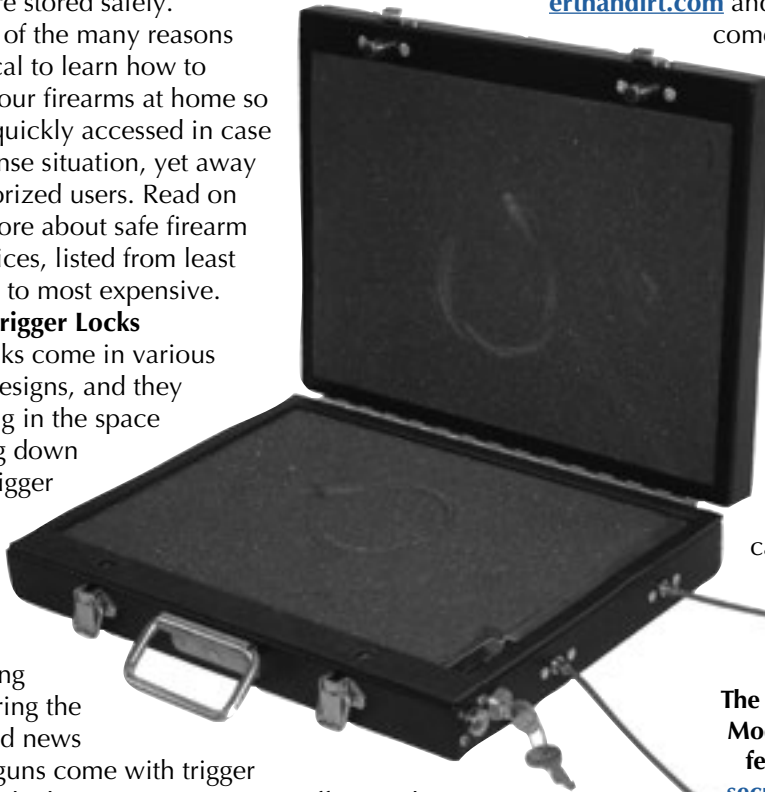

blocking the action of the firearm, preventing the action of rifles and shotguns from being completely closed. When used to lock up a semiauto, they prevent the gun's magazine from being loaded up into the grip. If you want to use a cable lock to secure your revolver, loop the cable through the barrel to prevent the cylinder from closing.

Gun Cases

You can purchase a gun case at most sporting good stores, large department stores such as Wal-Mart, Harbor Freight, and Tractor Supply, or online sites such as cheaperthandirt.com and sportsmansguide.com. Gun cases come in a huge variety of shapes and sizes and are made of several materials making them soft-sided or hard-sided. On the low-end of the price range, you can purchase a gun case made of soft, vinyl, nylon or fabric material all the way up to the more military-style, rugged cases that are lined with thick foam. Some cases can only hold one firearm, while the other larger, more expensive cases can hold several, in addition to pockets on the outside to store your ammo. No matter the material, you can lock most of them by inserting a padlock through the zipper pull or carry handle.

My only concern here is that since their main purpose is to protect the gun from damage during handling and transport,

most gun cases can easily be cut in to in order to get at the firearm. Needless to say, it would be easier for anyone to cut into a soft-sided gun case than a hard-plastic case, so if it's in your budget, I say spring for the hard-plastic cases. Gun cases are designed to be lightweight and easy to carry, so if you can lift it, so can

The Secure Firearm Products Model 16123 Security Case features a locking cable. securefirearmproducts.com

the bad guy, carrying your gun out of your house during a robbery, and off to another location.

Strong Boxes

In my opinion, the thinking behind strong boxes, security boxes and lock boxes is pure genius – manufacturers wanted to provide firearm owners with a place to store their guns that's nearly impossible for unauthorized personnel to access, yet small and easy for the gun owner to tote around the house. These boxes can be placed under your bed, in a nightstand drawer, or on top of your living room entertainment center for quick access in a self-defense situation. Prices for these items range anywhere from \$50 to about \$350, but worth every penny if you ask me. Two of the top manufacturers that have a wide variety of these cases are GunVault and Hornady.

One of GunVault's newest products, the MiniVault® GV1050-19, provides access to a handgun 20 percent faster than its predecessor thanks to a cool, new automatic slide-out drawer. Here's how it works: upon entry of the correct code, the safe door simultaneously opens while the foam-padded auto slide-out drawer gives you quick and easy, unobstructed access to your handgun. Aiding in low-light conditions, a red LED illuminates the interior of the GV1050-19, helping you see the guns in a dark bedroom in the middle of the night.

Besides terrific ammo, Hornady also offers a huge line of strong boxes. Check out their RAPiD® Safes that offer the following features: fast, touch-free entry via their RFID (activated by watchband), key fob or decal to immediately open the spring-assisted lid. You can program up to five tags for each safe, and program a four to six-digit security code. Their RAPiD® Safe Night Guard starts at \$333.99.

Finally, if you travel a lot, check out Secure Firearms Products. They offer very rugged, metallic cases with welded corners, heavy-duty plated steel latches, case hardened locking studs, and a high security Medico Lock. You can also attach their products to the inside of your car, the wall of a closet, or the inside of your suitcase when flying commercially.

Gun Cabinets

Ranging in price from about \$150 to \$500, gun cabinets are the next level up from strong boxes to store your firearms at home. Gun cabinets are made of a thin layer of steel and a simple, easy-to-operate lock. Most cabinets can store anywhere from six long guns (rifles and shotguns) up to about 20 and are lightweight enough to move up and down steps. My only caution here is that if they are light enough to move around, what's going to stop someone from carrying it out of your house? That's why I strongly suggest if you decide to purchase a gun cabinet, make sure it's bolted to the floor.

Stack-On is a 40-year-old company that supplies gun cabinets to Wal-Mart and Tractor Supply at

budget-friendly prices. For example, their Model GCB-18-C is an 18 Gun Security Cabinet that features a convertible interior allowing for storage of up to 18 long guns or 9 long guns and 2 steel shelves for the storage of ammunition, supplies and valuables. Molded barrel rests with included scoped rifle standoffs are included. The 3-point locking system and welded steel construction keep firearms and valuables safe and secure. (<https://stack-on.com/>)

Gun cabinets are also available at most large sporting goods stores, such as Cabela's, in addition to Home Depot and Lowe's.

Gun Safes

Gun safes are one of the many reasons I buy lottery tickets! But seriously, gun safes represent the most secure gun storage option available to the average gun owner, according to the NRA. The sheer size, weight, heavy-gauge steel of the outer box, a sophisticated lock, and the option to bolt the safe directly to a concrete floor make it impenetrable to burglars. Gun safes not only safely store your guns, but they also protect them from fires and floods. Top names in gun safe manufacturers include Cannon, Fort Knox, and Liberty Safe.

Buying a gun safe and installing it in your home means you've made a considerable investment, as they range anywhere from a low of about \$500 to \$2500 and up. That's why it's a good idea to consider the following:

How many guns do I own? The gun store owners (that sell safes) I chatted with told me the biggest mistake they see gun owners make is to underestimate the size of the safe they need. The last thing you want to do is have to purchase another gun safe down the road, so take a complete inventory of the guns you presently have, in addition of bumping up that number to accommodate future purchases. Also keep in mind ammo and accessories such as holsters, etc.

What steel thickness should I look for? Needless to say, the thicker the steel, the tougher it will be for a burglar to try to break in or steal your safe. However, the thicker the steel, the higher the price. Steel is gauged using a reverse scale, so the smaller the number, the thicker the steel will be. For example, 10-gauge steel is thicker than 12-gauge steel.

What is the fire rating? Most gun safes have a fire rating, which is determined by noting the internal temperature while exposing the safe to a variety of external temperatures. According to the NRA, the average home will burn to the ground within about 60 minutes without fire fighters arriving to put out the fire. Most emergency units should arrive on the scene within about 15 minutes. The temperature of a house on fire can reach as high as 1,300 degrees F, so the NRA suggests if the contents of a safe can survive an hour or more at 1,300 degrees F, it's a good choice.

The two-chamber
muzzle brake
provides excellent
muzzle control
during rapid fire.

**ITS TIME HAS
COME AT LAST:
PIONEER ARMS
5.56MM AK**

By Oleg Volk

The AK47 and its clones in the orthodox 7.62x39mm chambering have earned a well-deserved reputation for toughness and reliability. Despite those wonderful qualities, the USSR replaced them with the AK74 chambered for 5.45x39mm, a round that's a ballistic near clone of the American 5.56x45mm. The decision makes sense once you shoot an AK74. The barrel is more rigid, improving accuracy. The weight of ammunition is much reduced, along with the weight of the magazine: a steel magazine with 30 rounds of 7.62mm ammunition weighs around 1.8 pounds, while a polymer 5.45mm 30-rounder just 1.2 pounds. Felt recoil is much diminished, improving the practical rate of accurate fire. Higher muzzle velocity gives a flatter trajectory and reduced wind drift, extending the effective range from about 300 yards to near 400. Yet, despite these advantages, 5.45mm AK rifles were slow to gain popularity with American shooters.

For one, 7.62mm had been available much longer than the 5.45mm version. The newer AK74 clones were fewer in number at first, often more expensive. The magazines, long available only as surplus – especially during the AWB years – were cheaper and easier to find for the AK47. For another, the reduced ammunition weight and increased range were more critical for military applications than for typical defensive and hunting uses in the US. The larger .310 caliber bullet was legal for deer in more states than the skinny lightweight .22 caliber projectile for the AK74. While corrosive surplus ammunition and Russian-made commercial 5.45mm fodder was no more expensive than 7.62x39 ammo, the reliance purely on imports from a single country worried many. Outside of Russia, Ukraine, and former East Germany (in small

measure) nobody adopted the smaller round, so its future was seen as uncertain.

Sometime after 2004, 5.56mm AK pattern rifles became widely available in the US. Israeli experience with Galil, a rifle closely modeled on the AK mechanism, proved that the 5.56mm cartridge can be used to good effect despite the straight-wall cartridge case being harder to extract than the more tapered Soviet rounds. Despite the quality offerings, 5.56mm AKs hadn't gotten much of a foothold in the American market. 5.56mm ammunition was more expensive than Combloc surplus, and even imported blasting-grade steel cased 5.56mm cost more than the 7.62 and 5.45 offerings from the same brands due to the economies of scale. New manufacture magazines cost more than surplus too, and the rifles themselves had to use newly manufactured barrels, raising the cost further. Many just said that shooting 5.56mm means using an AR15 and not messing with the inferior AK ergonomics. With all those factors, how did 5.56mm AKs suddenly surge in popularity, to the tune of entire shipments selling out in advance?

The popularity of 5.56 AKs has been a sudden confluence of circumstances. The availability of mainly imported Combloc calibers has waned, raising prices. At similar or even lower prices than 7.62 and 5.45, most types of conveniently non-corrosive 5.56 win on quality. As heavy steel magazines in all calibers get supplanted by lighter polymer designs, the price differential on them disappears as well. While practical accuracy remains similar using iron sights, side rails, railed top covers, and rear leaf sight Picatinny mounts give many options for use of optics, including LPVO scopes, narrowing or removing the accuracy gap between AK and AR platforms. Certain quaint features of the AK design, like the metal

Both Hellpup and the underfolder can be adapted for US-pattern muzzle devices with this adapter.

Suppressed, the underfolder kicks even less without gas blowback. Point of impact shifts just enough to justify rezeroing.

underfolder stock, became more comfortable to use with the lower-recoil chambering. Adjustable folding stocks, such as from MagPul, further increased the number of ergonomic options. Instead of the budget solution for people who couldn't afford an AR15, the AK platform evolved into a fully featured choice of preference for those who appreciated its good sides. For example, it's easier to extract a stuck case from an AK. It's easier to seat a fully loaded magazine on a closed bolt with the rock and lock motion. The rifle can be fired with the stock folded if necessary. Chrome-lined barrels so appreciated by the users of corrosive ammunition gave way to nitride treatment of similar corrosion resistance but greater smoothness for better accuracy.

As the flow of surplus parts slowed down due to increased import restrictions and the current war, the prices of AK rifles climbed. Like caviar, which used to

be the food for the poor and the dogs, AKs became a potentially expensive choice, with some US-built brands selling upward of \$3000. Pioneer Arms US, an importer working closely with Pioneer Arms in Radom, Poland, found a way to bring three configurations of 5.56mm AK to the US at far more reasonable prices, around \$800 with two 30-round magazines. Imported in permitted single-stack configurations, the guns get further machined and turned into their ultimate form at a high-tech factory in Port Orange, Florida.

The models are Hellpup pistols with an 11.7-inch barrel, and fixed-stock or underfolder rifles with 16-inch barrels. While these guns all have M14 x 1 LH threaded muzzles, Pioneer Arms offers an adapter to permit the use of 1/2x28 threaded American muzzle devices, including sound suppressors. Firing this rifle with a sound suppressor attached proved very comfortable, with no perceptible gas

Above: Hellpup side rail supports red dots to augment the standard irons. The shorter barrel means that the range marking should be verified by test firing. **Inset below:** US made reinforced polymer magazines are extremely lightweight and work perfectly.

blowback at all thanks to the long-stroke piston and generally enclosed receiver. A relatively light barrel and forend kept even the suppressed rifle from getting front-heavy.

With a spring-loaded tab to orient brakes and flash hiders, timing them is easy. The rifle ships with a slant AK47 compensator and an efficient two-port "castle" brake. Hellpup and the fixed-stock Classic come with an upgraded safety featuring a second wide paddle to allow disengagement without moving the hand from the pistol grip. All models allow manual locking of the bolt into a slot in the safety lever. The trigger is a typical AK, weighing in at about 5 pounds. Its smoothness can be improved with judicious polishing of the engagement surfaces.

While the barrel has a fast 1:7 twist, it has best accuracy with lightweight bullets. Other people's accuracy tests with magnified optics and match-grade 55-grain projectiles showed groups under 1.5 MOA. Considering

that the most available and cheapest 5.56mm ammunition is 55 grains, that's a convenient coincidence. Reliability... it's an AK. We had zero issues with any of the rifles, and the finish was good enough to avoid rust after the test guns got waterlogged in a downpour.

All in all, Pioneer Arms succeeded in making a budget-friendly but high-quality firearm for sport, defense, or hunting. As the market support has caught up with the shooters' needs, 5.56mm AK has become a natural choice, especially for people who already have other guns in that caliber. Between a tight quality control protocol and excellent customer service, Pioneer Arms US has become a major player in this market segment. You will notice that this article has no photos of the fixed-stock configuration of 5.56mm AK: that's because all shipments of them pre-sold before even clearing customs. I guess I'm not the only person to have noticed this brand.

Nighthawk Custom Drop-In 1911 Trigger System

When looking to upgrade the performance of a 1911 pistol, a common improvement sought by shooters is a high-quality trigger job, with a crisp, clean break. Until now, a high-quality trigger job has never been in the realm of a "drop-in" upgrade. Nighthawk Custom has changed that with the introduction of its Drop-In Trigger System (DTS) for 1911 pistols.

An all-in-one unit, the DTS replaces your existing hammer, hammer strut, sear, disconnector, and sear spring. Your existing sear pin and hammer pin will be retained for use with the DTS, but no other parts are necessary for installation. With a steel housing securing the unit, the DTS features all Fully Machined™, stainless steel internal components. The traditional three-pronged sear spring is no longer necessary as the springs for the disconnector and sear are built into the unit. A single-leg grip safety spring is included with the DTS to replace the existing sear spring.

The DTS is designed for use in most 1911 models, and installation is simple enough that minimal gunsmithing skills are necessary.

STOP ABUSING YOUR FIREARMS!

Part 5: Proper Tools for Firearms, and the Long-Term Storage of Loaded Magazines

By Jimmi Bonavita

Firearms owners are well-advised to invest in a high-quality set of “hollow ground” screwdrivers specifically meant for use on firearms for their regular maintenance and minor gunsmithing chores. Never rely on screwdrivers from your automotive toolbox, or random examples you have purchased from a big box store’s bargain bin, yard/garage sale or local flea market. The necessity for the tip of the screwdriver’s blade to precisely fit the screw slot’s shape, width and depth is paramount to prevent damage to the screw, and from marring the finish of the firearm if the screwdriver slips under pressure during use. This advice cannot be overemphasized!

Professional gunsmiths know that because outside vendors provide many of the screws for modern firearms, screw slot dimensions can vary from screw to screw, even on seemingly identical screws on the same firearm! Nothing is quite as heartbreaking as an ill-fitting screwdriver tip slipping out of a screw slot once pressure is applied, skidding across a finely blued (or stainless steel) firearm leaving a jagged trench across its surface! Anyone who owns even a single firearm has probably had this happen at least once in the past. Every step should therefore be taken to ensure that it can never happen again! Damaged screws not only detract from your firearms’ appearance, but also affects their overall value, and it could even affect the functionality of the firearm during a critical self-defense incident if a screw should loosen or be completely dislodged during a critical point in the firearm’s use.

Brownell’s (brownells.com), the world’s largest distributor of gunsmithing tools, materials and supplies, sells an incredible array of handy and affordable, hollow-ground “Magna-Tip” interchangeable, multi-tip gun screwdriver sets.

Dillon Precision also carries matched, professional sets of the old gunsmith standby: U.S.-made Grace hard-wood-handled 8650 Chromium-Vanadium steel alloy screwdrivers. I own several sets of both and keep at least one set of each in a couple of convenient locations within my home for those unexpected and quickly needed adjustments and/or repairs. I can assure you they are

truly wise and welcomed investments that have served me well for almost five decades now.

If you were to ask me the most controversial subject concerning firearms I’ve had throughout my lifetime with military personnel, law enforcement officers, and gun owners in general, it would have to be the never-ending controversial question, “How long can I leave ammunition loaded in my semiautomatic’s (detachable box) magazine before it fails or is otherwise adversely affected?” And just like every other subject that gets cussed and discussed daily in the world of firearms, there is “theory” versus “reality.”

In the early 1970s I attended the University of Virginia where several of my dorm mates were engineering students (Nerds we referred to as “Toolies”)

who were enrolled in the prestigious UVA School of Engineering and Applied Science, and we had many

The Grace USA Gun Care Tool Set is available from Dillon Precision. See Page 70.

late-night discussions about the theories of physics and applied engineering principles. Although I was a pre-med biology major, I was already a very committed gun owner, and the subject of leaving ammunition loaded for long periods of time in the detachable box magazines of semiautomatic rifles and handguns arose one night, the first of many discussions on the subject I've had for more than 50 years!

Back then my engineering dorm mates had little knowledge of, or experience with firearms, and their positions were heavy with theories and information of metallurgical content and physics. But I'd already had considerable real-world experience with many semiautomatic (and some full-auto) firearms, having owned and shot many of them during the previous decade. I knew that detachable box magazine springs would eventually "take a set" under the constant weight and compression of ammunition if left loaded for an extended period. The stress of compression on a magazine spring over time will weaken it enough to lessen the angle of alignment of the cartridge on the magazine follower, thus decreasing the angle of feed into the chamber, which will ultimately result in stovepipes, double-feeds and/or total failures to feed.

One student flatly stated that "spring steel magazine springs will (in theory) never 'take a set' or fail to function, no matter how long the magazines are left fully loaded." I have heard this currently echoed by several professional engineers of my current acquaintance, all of whom have very limited, if any, firearms experience! To my knowledge, their "theories" did not reflect any "scientific" testing. Having carried at least one loaded firearm (and occasionally two) daily for a half-century and having owned and used close to 10,000 semi- and full-auto magazines over my lifetime, I can assure you with total certainty that all detachable box magazine springs will indeed eventually "take a set" if the magazines are left continually loaded with ammunition for extended periods of time.

A good example of this eventual weakening, years ago I owned a half-dozen 9mm Uzi and Mini-Uzi submachine guns and therefore needed many magazines to feed them. I negotiated a quantity price from a major military parts supplier for a large number of new Israeli military-issue Uzi 25-round and 32-round submachine gun magazines. They arrived at my door still heavily wrapped in their original waxed paper and Cosmoline. I had to spend several nights in front of my TV over a bucket of solvent, removing that Cosmoline from the disassembled magazines with a stiff brush and a lot of elbow grease. After air-drying, lightly lubricating and reassembling them, I learned that even with the assistance of a surplus Uzi magazine loader in my very large and strong hands, it was nearly impossible for me to load their full complement of 25 or 32 rounds! Clearly, if these magazines were going to usable, I needed a simple

solution for "breaking them in." Using experience and common sense (trust me, I'd never read of this problem in any firearms manual!), I fully loaded the magazines to capacity and left them untouched on a shelf for about the next four months, awaiting warmer weather and my next range session.

At the range afterwards, each of those new Uzi magazines performed flawlessly, but even more amazingly, could thereafter be loaded with bare hands and without the use of a magazine loader! Contrary to the espoused theories of the numerous engineers that have argued this issue with me all through the years, this experiment proved to me beyond doubt that leaving those magazines fully loaded demonstrably reduced the tension of the springs to acceptable, serviceable levels.

As if I/we needed further examples to prove my point, over the last couple of decades I have acquired numerous firearms through private estate sales that contained various semiauto pistol and rifle magazines that had, usually from neglect, remained unattended and loaded from at least a few months to an unknown number of years! Not only was there absolutely no tension remaining in the magazine spring to effectively feed the rounds therein, but once empty, the magazine followers were found to be completely frozen, usually near the bottom of the magazine! But with few exceptions, those same magazines, after disassembly, cleaning, removal of any corrosion, light lubrication...and followed by several months of sitting empty and unused on a shelf, those magazines were again perfectly serviceable!

Depending on environmental factors (temperature, humidity, ammunition capacity, and/or the length of the magazines), the springs can noticeably and measurably begin to weaken usually in three to four months. Therefore, my best advice to anyone considering owning and carrying a semiauto firearm for duty/off duty or self-protection is to minimally purchase at least twice the number of magazines they need for daily carry, and to regularly "swap out" those magazines at least every four-month intervals to help guarantee their personal safety and readiness! I personally do this with all the semiautos I carry, and even the ones I keep on hand for defensive use throughout my home. Swapping out magazines every three or four months is prudent advice for someone who is betting their life on their pistol to fire first time, and every time, should "the balloon go up."

One final note: my choice of a "back-up" piece for "last ditch" life-and-death survival situations during the almost three decades I worked the streets (and the occasional high-risk situation today) was and is a five-shot, J-Frame Smith & Wesson revolver hidden discretely on my person because I am confident it will fire first time, every time, regardless of how long it's been loaded.*

Be safe, be smart, and be well informed!

**Revolver springs are at rest until the revolver is fired.*

Real Avid Gun Tools & Cleaning Gear

Smart Mats™ are cleaning mats on steroids. The no-slip backed padded mat features an oil-resistant surface. It allows you to properly clean your gun without ruining the kitchen table and is large enough to handle field-stripped guns. The ingenious magnetic parts tray ensures your pins, screws and springs are never lost again. This is real world gun cleaning taken to the next level.

Real Avid Level-Right™ PRO

A level reticle is critical to long-range accuracy. For longer shots a canted reticle will pull or push a bullet's trajectory off of vertical center. It gets worse the more the distance increases. A level scope means that the reticle will be perfectly aligned with the rifle bore. Balancing small levels on a scope turret and gun receivers has been a commonly accepted

practice for years. Not only is this a clumsy process, it's wrong. The turret on most scopes is not perfectly aligned with the reticle, so even if your turret is level to the gun, your scope may not be. Level-Right PRO simplifies scope alignment in four easy steps. Accurate and intuitive, this instrument quickly aligns the actual scope reticle to the horizontal gun plane, which is key to the long-range accuracy of your rifle. Level-Right PRO helps you quickly and confidently mount a scope for maximum accuracy.

Level-Right PRO

Slip 2000 Products

725 Gun Cleaner Degreaser

should truly be called Super Degreaser. This water-based cleaner will cut through the toughest cosmoline, carbon, grease and grime! Its super strength allows it to degum and degunk the dirtiest of gun parts when sprayed on or used in parts washers or solvent tanks! **NOTE:** To help prevent rusting, users must apply a gun lubricant immediately after cleaning to disperse any moisture in parts.

16 Oz. 19237 \$24.00

Slip 2000 Carbon Killer

provides you with a safe, effective way to clean carbon, lead and plastic wad fouling. Unlike other gun cleaners, this product is non-flammable, non-hazardous and biodegradable. Designed for soaking metal parts with baked on carbon, Carbon Killer dissolves carbon and lead on contact. **NOTE:** Carbon Killer is for cleaning internal metal gun parts with baked on carbon by soaking them. It is an aggressive cleaner and should not be used to clean the outside of your gun. It can damage and even remove some finishes.

15 Oz. 19234 \$24.00

Slip 2000's **Extreme Cleaning System** contains 2 Oz. bottles of: Carbon Killer Bore Cleaner, 725 Gun Cleaner Degreaser, and EWL Extreme Weapons Lubricant.

11652 \$28.00

Slip 2000's **AR Cleaning System** contains a 7 Oz. bottle of Carbon Killer Bore Cleaner, a 15cc syringe of Extreme Weapons Grease, and a 1 Oz. bottle of EWL Extreme Weapons Lubricant.

11676 \$22.00

Slip 2000 **Extreme Weapons Lubricant** (EWL) was designed for use on chain guns and machine guns like the MP5 and the 249SAW. It contains a proprietary Anti-wear agent that reduces friction and wear by 90-95 percent. It is an excellent CLP and is able to clean, lubricate and protect.

4 Oz. 11644 \$21.00

Slip 2000 **EWL30** has the same properties as EWL, except it is a lot thicker. It contains a proprietary thickening agent that makes this lubricant consistency like a 30-weight motor oil. It was designed for those who want or need a lubricant that will not migrate at all and don't want to use a thick grease.

4 Oz. 11645 \$24.00

Slip 2000 **Copper Cutter** is specially formulated to remove copper, lead, powder residue and plastic wad fouling from bore surfaces with little scrubbing! **NOTE:** It is a water based, ammonia enhanced product and will remove all lubrication or oil protection, so always re-lube all parts cleaned.

4 Oz. 11646 \$14.00

Each Slip 2000 **Gun Wipe** packet contains one 5" x 8" wipe treated with Slip 2000 Synthetic Gun Lube. Perfect for wiping your guns down after a day on the range or while out on a hunt. Apply to all metal surfaces. Great for light carbon cleaning. Safe for all firearm stocks and grips.

20 Pack 11674 \$17.00

MIL-COMM Extreme Performance Lubricants

TW-25B is the choice of leading firearms manufacturers, armorers, pro shooters and gun enthusiasts, and is recognized as the world's best all-purpose weapons lubricant/protectant. It is now widely specified by the U.S. military for their most critical performance weapons systems. Environmentally safe, non-carcinogenic, non-ozone-depleting.

Sack-Ups Protective Gun Sacks

Sack-Ups Protective Gun Sacks protect your firearms from the dings and scratches that tend to happen when you're rifling through your gun safe looking for...well...your rifle. They don't take up as much room as a gun case, but provide just enough padding to keep your guns safe...in your gun safe.

THE TEST

Can You Pass This Use-Of-Force Test?

By Chuck Klein

Knowing how to shoot is the easy part.

Knowing when is the important part.

PREFACE

We are living in very dangerous times with ever-increasing drug-related shootouts, gang warfare battles, disgruntled murderous employees, psychotic killers, stalkers, and robbers with no feelings for human life, enigmatic mass shooters and politically motivated fanatics, etc. Adding to this escalating violence is the multiplicity of super-predators or just plain bad guys that are carrying guns. The proliferation of firearms in our social makeup has made being proficient at hand-to-hand defensive techniques academic.

The recent spate of states allowing constitutional carry is good...and not so good. Great inasmuch as the Second Amendment is finally being acknowledged and recognized as a “shall not be infringed” right. Also on the plus side, citizens in most states are not burdened with having to secure a state-issued permit to exercise a right they’ve had all along. On the downside is that some law-abiding gun-toters have not received training in hitting the target and education in knowing when to engage a lethal threat. Being able to hit the target and more importantly if the target should be hit is problematic not only for the shooter (liability wise), but for the rest of us should we become an inadvertent victim due to a missed shot. In other words, yahoos opening fire under wrongful conditions and missing their target could jeopardize not only innocents present, but gun owners, *per se*.

It’s incumbent on all gun owners to become proficient in the aspects of use of force, and this Q&A, hopefully, will aid the practitioner in the mental traits required for self-defense carry. This is not a game. There are real life-and-death consequences every time a firearm is used.

Note: Some of these questions seem to have more than one correct answer, but there is only one best answer.

The answers to the following questions are personal opinions of the author, thus no accountability, liability or responsibility is assumed: always seek legal advice from a practicing attorney in your jurisdiction.

THE QUESTIONS

1) While shopping at a local convenience store, you notice the terrified look on the cashier’s face as she hands over money from the register to a hooded person holding what appears to be a short-barreled shotgun. The hooded person tucks the gun into his long overcoat and moves toward the exit. You are legally carrying a concealed firearm. Do you:

- a. Follow the hooded person outside where there are no bystanders, draw your handgun and, while chasing him and pointing your gun at him, call for him to halt or you’ll shoot?
- b. Draw your gun and shoot the hooded person before he exits the store?
- c. Without drawing your handgun, shelter-in-place and call 9-1-1?
- d. Draw your handgun and be prepared to use it should there be accomplices still in the store or the robber returns – then call 9-1-1?

2) Accompanied by two loved ones, you are walking on a public sidewalk with your legally carried firearm concealed in a hip holster. Suddenly, you are confronted by a man brandishing a handgun, standing at arm’s length, and demanding your money. Do you:

- a. While looking him in the eye and vocally telling him to go away in a commanding voice, ignore his demands, while placing yourself in front of your loved ones and reaching for your cell phone?
- b. Immediately reach for your cell phone to call 9-1-1 while telling your loved ones to run away?
- c. Grab for his gun with one hand while drawing your own gun and then shoot him if he has not relinquished control of his gun by the time your gun comes to battery?
- d. Do not look him in the eye, beg him to point his gun away and while promising to give him your money which you tell him is in your hip pocket. Then slowly reach for your hip-holstered gun, draw it and shoot him – continually and until he is no longer a threat?
- e. Surrender your money and when he turns to leave, draw your gun and shoot him?

3) Where is the safest and best location to keep a self-defense handgun?

- a. In a locked container.
- b. In a secure, but accessible only to you, locked container.
- c. On your person.
- d. In your motor vehicle.

4) You are legally carrying a concealed handgun and while standing next to your car in a shopping center parking lot, you hear a disturbance. Turning to look, you see a man about your size, beating another person with a length of 2x4. The man is across a driving lane – about 25 feet from you. He sees you looking at him, raises the 2x4, screams he's going to kill you and then begins to advance. Considering your safety and legal consequences, do you:

- a. Draw your weapon and shoot him?
- b. Run away?
- c. Draw your handgun and fire a warning shot then shoot him if necessary?
- d. Shoot to wound in the arm or leg?
- e. Enter your car and call 9-1-1, draw your handgun and be prepared to use it?

5) Before retiring for the night, you should check to see if:

- a. Everyone is home that should be.
- b. The doors are locked, and night lights set.
- c. Your home defense device is in place and undisturbed.
- d. All the above.

6) Suppose a road-rage incident occurs and you and the other driver pull off the road, stopping about 50 feet apart, and exit your vehicles. The other driver, who is about your size, then starts to walk toward you carrying a raised tire iron and saying he's going to beat you to a pulp. You immediately back up and shout, "I'm sorry. I'll just get in my car and go away." The other driver lowers the tire iron, turns, and starts toward his car. At this point you draw your gun that you legally carry and shout, "If you don't get out of here, I'll shoot you dead." He turns and starts toward you, raising the tire iron. Would you:

- a. Be justified in using lethal force if you first fired a warning shot?
- b. Be justified in using lethal force because he represented an immediate threat of death or great bodily harm to you?
- c. Not be justified in shooting because the threat had passed and you re-opened the altercation, thus becoming the aggressor and therefore losing your right to self-defense?
- d. Not be justified in shooting because a tire iron is not a lethal weapon?
- e. Both a. and b.?

7) Exercising your right to self-defense when under attack, and when there is no other option, shooting to wound is:

- a. Not recommended because it is nearly impossible, under stress of a lethal force incident, for even the best of marksmen to stop a deadly attack by intentionally wounding;
- b. Not recommended because wounded persons can be very dangerous. A wounded person may not cease his/her life-threatening actions and can intentionally or unintentionally kill innocent bystanders.
- c. Not recommended because the most effective means of immediately stopping a deadly assault is by causing your bullets to strike the largest area – center mass – of your assailant's body.
- d. All the above.
- e. Rather than risk a murder charge or the taking of another's life, shooting to wound is the preferred method of dealing with lethal force encounters.

8) During a lethal force incident, the last thing a morally responsible, prudent civilian wants to do is:

- a. Be killed.
- b. Be labeled a coward.
- c. Kill another person.
- d. Lose his/her right to CCW.

9) The killing of one human being by another is called:

- a. Murder.
- b. Negligent homicide.
- c. Excusable homicide.
- d. Justifiable homicide.
- e. Any of the above.

10) The purposeful and unlawful killing of one human being by another is called:

- a. Murder.
- b. Negligent homicide.
- c. Excusable homicide.
- d. Justifiable homicide.

11) You are the lawful owner of a handgun. Should you:

- a. Never carry outside your home.
- b. Carry all the time, even in your own home.
- c. Carry only when you might be visiting an unsafe location.
- d. Carry all the time, except when in your own home.

12) You are in a big-box store when you hear gunfire. You look to your right to see a man with a rifle walking and shooting. He is about a grocery aisle (20') away. He sees you and begins to turn toward you. Do you:

- a. Draw and shoot from the hip until the threat no longer exists?
- b. Draw and while looking intently at the center mass of his body shoot the instant your handgun reaches battery and continue shooting until the threat no longer exists?
- c. Draw and shoot as soon as you are able to establish

a good sight picture on the center mass of the threat and continue shooting until the threat no longer exists?

d. Draw and shoot as soon as you are able to establish a good sight picture on the perp's leg to stop his advance and end the threat?

13) You are 5'2" weighing 120 pounds and legally carrying a handgun. While strolling through a public park, a man who appears to be about 6'2" weighing at least 220 pounds rapidly approaches you from a distance of less than seven yards as he raises his fists and begins shouting obscenities. There is no question in your mind that the intent of this person is to cause you serious harm. Do you:

a. Run away as fast as you can while trying to call 9-1-1?

b. Draw your legally carried handgun with one hand and use your other hand to possibly fend off this aggressive person?

c. Inasmuch as he has not touched you, calmly retract your cell phone and call 9-1-1?

d. Draw your handgun and shoot him?

14) You are 6'2" weighing 220 pounds and legally carrying a handgun. While strolling through a public park, a man who appears to be about 5'2" weighing about 120 pounds rapidly approaches you and at a distance of less than seven yards, raises his fists and begins shouting obscenities. There is no question in your mind that the intent of this person is to cause you serious harm. Do you:

a. Run away as fast as you can while trying to call 9-1-1?

b. Draw your handgun with one hand and use your other hand to possibly fend off this aggressive person?

c. Stand your ground and return his insults in a loud voice?

d. Draw your handgun and shoot him?

15) Exiting your home, you watch an unidentified man slash a tire on your car that is parked on the public street. You call 9-1-1 while shouting at the man to stop. He then begins pouring a liquid, with the distinct odor of gasoline, on your car. Do you:

a. Draw your legally carried handgun, point it at him and order him to stop?

b. Draw your legally carried handgun and shoot him before he can torch your car?

c. Shout at him while calling 9-1-1, but do not approach him?

d. Rush the man and physically attack him to keep him from doing further damage?

16) In the immediate aftermath of having to deploy lethal force to defend yourself with your legally carried firearm you should:

a. Be sure the threat is no longer a danger.

b. Holster/pocket your firearm.

c. Call 9-1-1, stating your name, location and a very brief description of the incident being sure to note you were defending your life.

d. Call your lawyer.

e. All the above and in that order.

17) Having witnessed a lethal force incident, you should:

a. Vacate the scene as soon and quickly as possible.

b. Wait for the arrival of law enforcement officers and tell them what you witnessed.

c. Call 9-1-1.

d. Call your lawyer.

e. Both **b.** and **c.** – in reverse order.

18) You are hunting deer alone in deep forest with your legally carried rifle. You come upon a man sleeping on the ground with a revolver next to his hand. You recognize him as a person wanted by the police for a mass killing. Do you:

a. Use your firearm to blow him away before he awakens and can then use his gun to shoot you?

b. Make noise to awaken him while keeping your hunting rifle trained on him and then order him to move away from his revolver, then call 9-1-1?

c. Quietly retreat to a safe distance to call 9-1-1?

d. Quietly approach to take his revolver away from him before calling 9-1-1?

19) You are with your granddaughter in the hospital when she awakens from a coma after having been brutally beaten and raped. She tells you the perp's name and where he lives. Do you:

a. Drive to his house while calling 9-1-1?

b. Call the police with this information?

c. Drive to his house, seek him out and shoot him with your legally carried firearm?

d. Withhold this information and tell her to also not tell anyone as the perp or his family might seek retribution?

20) The Stand Your Ground law means:

a. You have the Constitutional right to not back down from a confrontation.

b. There is no such law.

c. Some states have enacted such a law that removes the obligation to flee when confronted with a lethal threat.

d. A federal law that removes the obligation to flee when confronted with a lethal threat.

ANSWERS

1) a. Wrong. Unless you are a law enforcement officer, you have no duty, power or right to apprehend the robber. When you point a firearm at another it is a felony in most jurisdictions, self-defense notwithstanding. See **d.** below.

b. Wrong. Intentionally shooting another is murder, self-defense notwithstanding.

c. Correct. Your life is not in immediate danger. Just

because you're packing a heater, doesn't mean you need to display it.

d. Wrong. Brandishing a firearm might get you killed. Responding law enforcement officers, the store owner/manager or on-scene, off-duty LEOs might mistake you as one of the robbers.

2) a. Wrong. If you believe that psychological tough talk will enable you to bluff your way out of a dangerous situation, you might be wrong...dead wrong. Super-predators – losers with nothing to lose – can't be bluffed.

b. Wrong. Some thugs, especially those strung out on drugs, will shoot you even after you have complied with their request.

c. Wrong. Only in the movies.

d. Correct. There are no guarantees in life, but this is your best option – practice your draw.

e. Wrong. If he is no longer a threat and you shoot him, it's called murder. See **b.** above.

3) a. Wrong. It wouldn't be of much value if needed in a hurry.

b. Wrong, but maybe at night if you have small children in the home.

c. Correct. On your person, a handgun is only accessible to you and is instantly available.

d. Wrong. Not even when you're operating the MV. If accessible it might be in violation of local laws and subject to theft if the vehicle is left unattended.

4) a. Correct. The man has beaten another with a weapon that can cause death or great bodily harm, he is advancing toward you, and he has verbally indicated he is going to kill you. At such close distance, you might only have time to draw and fire. You shoot for center mass (chest/abdomen) and continue shooting until the threat is gone. And, no, you are not trying to kill him – only stop his illegal and unwarranted deadly assault. Legally defensible.

b. Wrong. You might not be able to outrun him. Even if you are younger and a world-class sprinter, turning your back on a killer and trying to outrun him, without tripping, in a parking lot full of cars, people and shopping carts is not a good plan.

c. Wrong. Warning shots are almost never a good tactic as an errant shot could injure an innocent person. Witnesses, after the fact, could implicate you as the aggressor. A legal nightmare.

d. Wrong. Even police are not trained to shoot to wound. Trying to hit a moving limb is most difficult and even if successful, at such close distance, might not even slow him down. If unsuccessful (and you survive) a legal nightmare.

e. Wrong. You might not have time to open the door and enter the vehicle the windows of which offer little protection.

5) a. Wrong. Not the best answer. See **d.** below.

b. Wrong. Not the best answer. See **d.** below.

c. Wrong. Not the best answer. See **d.** below.

d. Correct. Prudent people should routinely make these observations including checking their "home defense device" which can be anything from a firearm to a baseball bat to the telephone.

6) a. Wrong. Not be justified in shooting because the threat had passed and you re-opened the altercation, thus becoming the aggressor and therefore losing your right to self-defense. Warning shots are almost never a good plan as an errant shot could injure an innocent person. Witnesses, after the fact, could implicate you as the aggressor. A legal nightmare. Court and state laws will never allow you to suck someone into a confrontation for the purpose of then claiming self-defense after killing him/her.

b. Wrong. Stand-your-ground laws do not apply to incidents in which you are the aggressor. See **a.** above.

c. Correct. If you create a lethal force incident, you must make it clear that you realize your error and stop your aggressive behavior. The problem here is proof. Sans conclusive evidence that you capitulated, might make it insurmountable when defending a charge of wrongful shooting. If you carry a concealed weapon in public, you can't go around trying to egg someone on so you can bring out the hardware to blow them away.

d. Wrong. Tire iron or any item that can be used as a weapon, including but not limited to, a length of 2x4, shovel, baseball bat, etc.

e. Wrong. See **c.** above.

7) a. Wrong. Not a complete or best answer.

b. Wrong. Not a complete or best answer.

c. Wrong. Not a complete or best answer.

d. Correct. All the above.

e. Wrong. Shooting the gun out of the attacker's hand or other "trick" shots are only found in the movies. Shooting to wound is an intentional act of assault (murder if the target dies). The only goal of the shooter is to STOP the deadly attack.

8) a. Correct. The "second" to last thing a morally responsible, prudent person wants to do is kill another person – but the last thing he/she wants to do is be the victim. Everything else is tied for third place.

b. Wrong. Tied for third place (LEOs excepted).

c. Wrong. Second Place.

d. Wrong. Tied for third place.

9) a. Wrong. Not the only or best answer.

b. Wrong. Not the only or best answer.

c. Wrong. Not the only or best answer.

d. Wrong. Not the only or best answer.

e. Correct. Legal definitions for taking the life of another human range from Murder (unlawful killing) to Negligent homicide (your fault auto accident) to Excusable homicide (willful but legal, such as the

executioner at the state prison) to Justifiable homicide (you were justified because he was trying to kill you).

10) a. Correct. If you killed someone on purpose and without legal authority, it's murder.

b. Wrong. If you did it on purpose, it's not due to negligence.

c. Wrong. Only if it is lawful.

d. Wrong. Not if it is unlawful.

11) a. Wrong. See b. below.

b. Correct. Lt. Umbaugh's law: *"One either never carries, or one always carries, but one never sometimes carries."* Imagine your home is the mistaken target of gangbangers believing you are a stockpiling drug-dealer? If they kick the door down while you and the family are watching TV or sitting at the kitchen table, what are you gonna do...holler "kings-ex," "times" or "Hey, no fair fellas, let me get my gat?" Suppose during normal waking hours, there's an innocent knock at the front door – by a person in normal attire or dressed like an ordinary delivery driver? The threat then pushes the door open as he intrudes. If you have to do anything other than draw (and fire if necessary), you (and your family) are the ones at the mercy of the invader. Small children at home? What safer place than secure on your person?

Sometimes carriers run the risk of not having their piece with them when they need it such as when you want to run down to the local convenience store – with your young daughter – for a soda, but don't want to bother with strapping on your handgun...then walk in on a mass shooting. Or forgetting they are packing when entering a forbidden area such as an airport, courthouse, etc.

c. Wrong. See b. above.

d. Wrong. Not the best answer, see b. above.

12) a. Wrong. Only in old cowboy movies or at contact distances.

b. Correct. Called Instinct Combat Shooting, it is the most effective method hitting a moving target in the shortest amount of time.

c. Wrong. Taking time – even milliseconds – to establish sight alignment or find the "red dot" might be all the time the perp needs to complete his attack on you. Sighted fire is most difficult if not impossible with a handgun against a moving target.

d. Wrong. Except for a knee hit – a very small target – it has significantly less chance of stopping an advancing threat...double/triple taps are virtually impossible especially on a moving target.

13) a. Wrong. He may be faster than you or you might trip.

b. Wrong. This is a disparity of force incident where the attacker is significantly larger than you.

c. Wrong. It is not required that one be injured before

deploying lethal force – only that one believes death or great bodily harm is imminent and there is no other option. See b. above.

d. Correct. This is disparity of force coupled with your belief that you are about to be seriously injured or killed, and the close distance leaves you no other option.

14) a. Correct. Run away as fast as you can while trying to call 9-1-1. This is a tough choice to make. Suffice it to say that it might be best to be pummeled by this much smaller person while you try to get away and call 9-1-1 than to have to defend yourself against charges of being the aggressor if you injure/kill him. In other words, in this (reverse) disparity of force incident it might be problematic to convince a jury that you believed he was about to subject you to great bodily harm or death.

b. Wrong. There is no need to draw your handgun. This is a disparity of force incident where the attacker is significantly smaller than you.

c. Wrong. Loud verbal exchanges might escalate the incident and might make you appear to be the aggressor.

d. Wrong. This is a disparity of force incident where the attacker is significantly smaller than you and using a firearm might lead to criminal charges against you.

15) a. Wrong. Pointing firearms in most jurisdictions is a criminal offense (see b. below).

b. Wrong. Lethal force to prevent destruction or protect property is not self-defense. The fire from you discharged gun could ignite the gasoline.

c. Correct. Property can be replaced – that's what insurance is for; unless property, be it a home, automobile or business is occupied, it can't be defended with lethal force.

d. Wrong. Even if you are sure, you can physically overpower this criminal, it could escalate whereas you might be deemed the aggressor, or worse, burned if a spark ignites the gasoline.

16) a. Wrong. Not the best answer. See e. below. Of course, you must be sure the threat is unable to continue the attack either by the removal of his/her weapon or is physically incapable.

b. Wrong. Not the best answer. See e. below. Lest you be mistaken as the bad guy by responding LEOs, your firearm should be secured.

c. Wrong. Not the best answer. See e. below. An immediate call to 9-1-1, establishes you as cooperative. It is imperative to state that you were defending your life.

d. Wrong. Not the best answer. See e. below. You will need legal advice at the earliest opportunity.

e. Correct. All the above and in that order.

17) a. Wrong. This might make you appear as an accomplice requiring legal complications.

b. Wrong. Not the best answer. See e. below.

c. Wrong. Not the best answer. See e. below.

d. Wrong. Not the best answer. See **e.** below. If you're only a witness, legal advice shouldn't be necessary.

e. Correct. Both b. and c. – in reverse order.

18) a. Wrong. Unless the state had appointed you executioner, it's murder.

b. Wrong. You're not a LEO. Allowing him to move makes him a difficult target should he produce another firearm.

c. Correct. Stay hidden until arrival of LE. If he spots you and comes after you, you're in a better position to defend yourself both physically and legally.

d. Wrong. Suppose he awakens before you can access his revolver.

19) a. Wrong. Nothing good can come of being present at his home.

b. Correct. This is a police matter and withholding information is a criminal offense.

c. Wrong. As tempting as exercising an "eye for and eye" is, it will not return your granddaughter to her previous state, and you will be facing murder charges.

d. Wrong. This is most difficult inasmuch as your granddaughter will have to relive the attack for police reports and possibly courtroom trials. Not tendering information to LE, might allow the perp to victimize others.

20) a. Wrong. There is nothing in the Constitution referencing this right.

b. Wrong. Some states have enacted such laws.

c. Correct. Some states – but not all states – have enacted such a law that removes the obligation to flee when confronted with a lethal threat.

d. Wrong. There is no federal Stand Your Ground law.

Scout Scope Mounts

Sorry, the optic pictured here is NOT included with the Scout Scope Mount.

Scout Scope Mounts provide an extremely stable optics base for your SAK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

BERRY'S

Like pretty much everything from Berry's Manufacturing, this 9" x 12" x 10" deep stackable utility box is made in America and covered by a lifetime warranty. The box is designed to stack and is great for storing bulky items. If your gun room/garage looks anything like ours, these will help you get organized. So, whether you're looking to store shooting accessories, ammo components, or car parts (we have more than our share of all of the above) these boxes are ideal. The best part is that they're transparent, so when you fill them, you don't have to open the WHOLE stack to find what you're looking for.

Stackable Utility Box 40194 \$20.99

Tri-Can Triple Ammo Can

The Tri-Can will change your life! The perfect organizational tool to fit any of your needs.

The tough injection molded plastic base and lid, rubber seal gasket, and cam-lock latch keeps your contents safe.

Comes with a strong handle for those who are on the go!

The Tri-Can is made up of three individual cans and can be customized with up to three individual cells.

The individual can dimensions are 9.25" L x 3.125" Base W x 3.125" Top W x 2.5" H

John Marshall on Classic Firearms: The Remington Model 30 Rifle

When World War I ended in 1918, the Remington Arms – Union Metallic Cartridge Company was left with a lot of machinery that been dedicated to producing the .30-06 U.S. Model 1917 “Enfield” rifle and prior to that, the .303 Pattern 14 Enfield for the British. This manufacturing equipment at the plants in Ilion, New York and Eddystone, Pennsylvania was now just sitting around. Since Winchester also manufactured the M1917, the total production of that rifle was impressive. It had become the most-used American rifle on the battlefields of Europe, eclipsing the number of co-existing Model 1903 Springfields that were the official U.S. military standard at that time. Of the 2.2 million produced, 545,541 of these rugged and accurate M1917 rifles were manufactured at the two Remington plants.

Besides the voluminous amount of production equipment now standing idle at Remington, there were leftover tons of unused and unfinished parts such as barrels, receivers, bolts, etc. It was natural to assume that returning veterans might be interested in a sporting rifle with the same basic characteristics as the military rifles with which most were familiar. Therefore, early on, Remington began to modify and adapt their machinery to produce a sporter rifle that might appeal to post-war sportsman

for hunting. Designers C.C. Loomis and C.H. Barnes had been appointed in November 1917 to figure out how to transform the proverbial sow’s ear into a silk purse. Together, they conferred on how to alter a not-so-beautiful war rifle into a new and sleek sporting firearm for civilian use.

The first obvious change decided on was ditching the full-length straight-comb M1917 stock with its

hook-shaped grip, long hand guard, long finger grooves, stacking swivel and bayonet stud. In its place was a sporter stock with a Schnabel tip that extended only about halfway down the barrel. This stock featured a pistol grip and a higher comb. The stock finish was high gloss and checkering was optional. Sling swivel studs were provided fore and aft. The barrel was trimmed down from 26 inches to 24. The protective ears on the M1917’s front and rear sights were removed, and a small quick-adjustable

“Early sales brochures totally omitted any reference to a model name, and some early rifles were not marked with a model number. It was not actually designated as the Model 30 until sometime in 1921.”

peep sight was installed on the now-rounded rear receiver bridge. Instead of the rough wartime finish of the M1917, the receiver and barrel were polished and given a commercial bluing. The buttplate used was a crescent style that was popular at that time. The “dogleg” bolt handle was retained, with its knob located close to the trigger for faster access. The cock-on-closing action was kept, as

Note the absence of any model number markings, the three-digit serial number, the adjustable receiver sight and the presence of the military stripper clip guide.

was the large rotating safety lever at the right rear of the receiver. The two-stage military trigger was continued. As was a feature of the original action, no cocking knob was employed on the firing pin shaft. The deep-bellied magazine of the war rifle was straightened out to be in line with the underside of the stock, reducing the magazine capacity from six to five cartridges. The initially produced rifles were all chambered for the .30-06 round. Very early rifles used modified surplus military parts. As production continued, some minor tweaks in a few parts were made. Later rifles were crafted using newly produced parts. Remington continued to use the same steel and heat treatment as was standard for the wartime guns. All actions were proof tested to 70,000 pounds per square inch of breech pressure. Manufacturing tolerances were tightened. Serial numbers began with number 00001. The rifle pictured is an early one numbered among the initial 600 rifles. It exhibits all the very early features.

First sales of the new rifle that was to be the Remington Model 30 finally began in November 1920. In fact, early sales brochures totally omitted any reference to a model name, and some early rifles were not marked with a model number. It was not actually designated as the Model 30 until sometime in 1921. The first Model 30s produced consisted of about 3,000 units and were offered from 1921 to 1925. Sales were not brisk initially, with the Great Depression being a major factor in the disappointing numbers.

A carbine with a 20-inch barrel became available from 1924 to 1925. Like its longer big brother, the only caliber then available was .30-06. Both early types were superseded in 1926 by the improved Model 30 Express. What was designated as the basic 30A had a 22-inch barrel, and besides the standard .30-06, the additional calibers of .25 Remington, .30 Remington, .32 Remington, .35 Remington, 7mm Mauser and .257 Roberts were offered as options. On these later guns, the aperture receiver sight was replaced with a conventional barrel-mounted open sight.

More elaborate grades subsequently became available. The fancy Deluxe 30S (later to become the 30SL), the

30SR with a Redfield rear sight, the 30SX with a Lyman sight, and the 30SM with a Marble-Goss sight were options. These more well-appointed models could be had with either a 22- or 24-inch barrel and specially selected stocks. In 1927, the Model 30R Carbine was unveiled in calibers .25 Remington, .30 Remington, .32 Remington and .30-06. Also, during this time period the crescent buttplate was abandoned for a more modestly curved shotgun-style type. Stock checkering became standard rather than optional. In 1928-30, Commander Richard Byrd used some .30-06 Model 30 Express models during his South Pole expedition. To help foil Depression-era gangsters, the FBI and a good number of U.S. police departments purchased Remington Model 30s to provide longer-range sniping firepower.

In 1932 and 1933 some noteworthy changes were made. The action was changed to cock-on-opening, and the trigger mechanism was updated to provide a short single-stage pull. By 1939, the receivers were drilled and tapped for receiver sights. Floating barrels were introduced, replacing the previous barrel bedding system that had the barrel contacting the front end of the stock.

The 30 Express models were made continuously between 1926 and 1940, with approximately 22,800 rifles produced. All Model 30 rifles were manufactured exclusively at Remington's Ilion facility. It's worth noting that the Model 30 was Remington's first high-power civilian bolt-action sporting rifle,

Production of the Model 30s came to an end with the advent of World War II in 1940. Remington did manufacture 2,427 similar Enfield-style sporting rifles known as model 720s starting in 1940 for a few years. They then primarily devoted their efforts to producing M1903, M1903A3 and M1903A4 rifles during WWII.

Today, the nostalgic Model 30s are very collectible and prized classic sporting rifles, and when found in nice condition are worth a tidy sum. The rifles in calibers other than .30-06 demand premium prices, as do the earlier versions made prior to the Express models. They are prime examples of notable sporting rifles from the Great Depression era.

DILLON: A MEMOIR

Read the story of Mike Dillon's journey from washing aircraft for a crop-dusting company, to airline pilot, to creator of The World's Finest Reloading Equipment, and ultimately, to the man who revolutionized the M134 Mini-Gun!

Along the way his adventures included restoring a P40 Warhawk, fighting wildfires in WWII-era bombers converted to drop fire retardant and writing articles about flying warbirds for *Air Progress* magazine.

Not content to rest upon his laurels for creating the World's Finest Reloading Equipment, Mike finished out his career by re-engineering the M134 Mini-Gun, helping to arm the US and its allies to fight the War on Terror across the globe.

Mike's memoir is a compelling read: the story of a man who believed he could do anything he set his mind to, and actually did it!

Pictured here are the original 1928 Navy Overstamp Thompson submachine gun Mike inherited from a friend who died in a tragic plane crash and a Star Machine Works reloader with Mike's "Super Star Conversion." These two items inspired Mike Dillon to found his own reloading equipment company. Read the book for details about how it happened.
