ATTENTION DILLON CUSTOMERS: Because of changes to California's Proposition 65 that took effect on August 30, 2018, companies doing business in California are mandated to provide warnings on products that may expose Californians to any one or more of a list of approximately 900 chemicals, including Lead, which are "known to the State of California to cause cancer, birth defects or other reproductive harm." The new regulation states that a warning must be "provided in the catalog in a manner that clearly associates it with the item being purchased." Though we have no reason to believe our products could cause harm when used as intended, we now include the appropriate Proposition 65 warnings on some of our products to meet the California "safe harbor" requirements.

Dillon's Bill of Rights for Reloaders

All of Dillon Precision's customers have certain inalienable rights when they buy a reloading product:

- 1. Right of Quality** – YOU THE CUSTOMER have the right to expect a well-designed product, manufactured with quality materials and workmanship that does what the seller claims it will do.
- 2. Right to Test and Send-Back** – YOU THE CUSTOMER should have the right to test the product on your own reloading bench for at least 30 days, and if it does not live up to your expectations, send it back for a full refund.
- 3. Right of Service** – YOU THE CUSTOMER have the right to free, friendly, expert service and technical advice available through a toll-free phone number. This service should include prompt replacement of broken or bad parts – free of charge.
- 4. Right of Warranty** – YOU THE CUSTOMER have the right to a lifetime warranty on any non-commercial-grade reloading product you purchase. *Unfortunately, we can't offer this warranty on textile products and electrical or electronic components.*
- 5. Right to be Heard** – YOU THE CUSTOMER should have the right to speak to someone of authority anytime you can't get satisfaction through normal channels. If our sales representatives aren't able to help you, our supervisors have a mandate to take customer-satisfaction issues all the way to the owner of the company if necessary.

Editor's Note: The Bill of Rights for Reloaders is Dillon Precision Products' customer-satisfaction policy. It remains very much unchanged from the day the company was founded. The disclaimer about textile products and electrical or electronic components reflects the reality of how those products are produced in today's world. Ultimately, our founder recognized that satisfied customers are our best advertising, and the only thing that differentiated his company from all the others at the time was the warranty and customer service he offered.

We constantly strive to live up to his standards.
Please let us know if we're not succeeding.

All the electrical and/or electronic components of Dillon equipment and all Dillon textiles are covered by a one-year warranty from date of purchase. Any modifications performed to Dillon machines, or the addition of any unapproved equipment, including automated or mechanical add-ons from other manufacturers, is expressly not recommended and will void the Dillon warranty.

CP2000[^]

Dillon's DEDICATED Case-Processing Machine!

- Made in the USA
- Eccentric Roller Bearing Drive System
- Smoother Operation, Less Effort
- Higher Throughput, Lower Cost Per Case
- Heavier Frame for Greater Rigidity
- Seven Threaded Stations for More Flexibility
- Upgraded Primer Pocket Swager
- Primer Pocket Swage Available in Two Stations
- User-Replaceable Swage Rod Tip
- Reinforced Toolhead Bolt & Washer
- Improved Shellplate Indexing System
- Processing Speed up to 2000 Cases Per Hour

Designed to complement our RL1100 and Super 1050, the CP2000 offers higher speed, greater versatility and added case processing capability...all at a much lower cost than dedicating a RELOADING machine to prep brass! If you're loading mass quantities of ammo, the CP2000 will make your task MUCH easier.

Rapid Trim 1500 Case Trimmer[^]

Dillon's
RT 1500
shown
installed
on an
XL 650.

The RT1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1500 is equipped with a

quick-disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT1500 Case Trimmer **62164** is **\$435.00**. (Available only in 110 volt 60 hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, **13141**, are **\$25.00** each. Upper lock rings, **13559**, are **\$9.00** each.

MILITARY BRASS?

**Eliminate the "Grunt Work" with
Dillon's Super Swage 600**

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

Case Preparation Equipment

CV2001 – The Industry Standard

Dillon’s CV2001 Vibratory Case Cleaner is one of the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour. Not only is our capacity greater than most, but our motor is also larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no “hobby” machine! The bowl and base are constructed of 7/32” thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media. We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners. The solution was an injection molded reversible part. Simple, and it works great. Our device is large, 10” x 14”,

Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You’ll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won’t weaken brass cases!

Rapid Polish 290

8 oz. bottle.	13804	\$9.99
Case (20 pc.)	20255	149.99

Dillon’s **D.C.L.** non-aerosol case lube is easy to use. Simply lay your cases out, spray lightly with one or two passes and you’ve done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge cases and you’re ready to load. Try a bottle. You’ll never use a grease pad again.

CM500 Case/Media Separator ^	21045	\$89.00

and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18” x 22”. The tub keeps the mess off the floor and bench. It’s fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon created the CV750 heavy duty Vibratory Case Cleaner for those with limited space. This case cleaner uses the same motor as the CV2001 and is every bit as tough – just more compact. To accompany the CV750, the CM500 does the same job as the larger CM2000 Case/Media Separator; and, like the CV750, handles just about half the capacity of the larger unit. Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

COPPER OUT. ACCURACY IN.

HODGDON CFE POWDERS. ACCURACY RUNS IN THE FAMILY.

Easy-metering Hodgdon CFE powders—three ways to extend hair-splitting accuracy between cleanups. One sure-fire way to prevent copper-fouling buildup for today's most popular pistol and rifle cartridges.

MV

The Webley Mk VI is a large-frame, but surprisingly lightweight, six-shot revolver chambered for the .455 Webley cartridge.

.455 Webley Mk VI

By Duane Thomas

For as long as I've been aware of its existence, I've wanted a really nice example of Webley Mk VI chambered in its original cartridge, .455 Webley. Not one of those poor, abused, desecrated .45 ACP conversions, I wanted a REAL .455 Webley Mk VI. Recently, that decades-long dream came true.

THE MK VI

There were six "Marks" of the Webley military revolver. The final, and ultimate, version, the Mk VI was introduced in 1915, a year into World War I. Total years of production were from 1915 to 1926 (by Webley from 1915-1923, and Enfield from 1921-1926, with that few-years overlap, 1921-1923, when it was being built by both companies). It was Britain's primary-issue service pistol through the Great War, and after its end, all the way through till 1932, and substitute-standard through World War II, until finally being pulled from service in the late 1940s. A big, honkin', beautiful (at least I think so), top-break, military revolver firing fat, slow, heavy bullets.

And my God, could that thing LOOK any more British?

CARTRIDGE HISTORY

Please bear with me while we go through a bit of British military revolver cartridge history. I promise this will all become important shortly.

The Mk VI's ancestor, the Webley Mk I, was officially adopted by the Brits in 1887. It wasn't until 1891 we saw a cartridge named .455 Webley. In the interim, guns were loaded with the previous service revolver cartridge, .476 Enfield. Despite the ".476" and ".455" designations, both cartridges fired .455" bullets; the .476 Enfield's name comes from measuring the diameter of the cartridge case, not the bullet diameter. Overall case length of .476 Enfield was .870".

The first .455 Webley load (also called the Mk I, not to be confused with the Mk I revolver), used black powder like the .476 Enfield before it, and had a case length of .886". With the changeover to smokeless powder, it was discovered that a charge weight small enough to give the desired low velocity (circa 650 feet per second), rattling around inside that long, black powder appropriate case gave very inconsistent ignition, with correspondingly erratic velocities and poor accuracy. In short order, with the .455 Webley's Mk II loading, case length was shortened to .770", where it stayed for all subsequent ammo Marks, as well.

Interesting fact: While they shortened the .455 Webley ammo's cartridge case, THEY NEVER SHORTENED THE GUNS' CHAMBERS. From the Mk I Webley revolvers all the way through Mk VI, they all had Mk I cartridge case length chambers.

This made sense, if you think about it. If you happened to be a British soldier running your Webley revolver in, let us say, India, it didn't matter whether your wonderful military supply system managed to provide you with .476 Enfield ammo OR .455 Webley Mk I OR .455 Webley Mk II OR any of the later Marks – your gun could still chamber and fire any of them.

The fact that .455 Webley revolvers all have chambers considerably longer than .455 Webley Mk II-and-later cases would become very important to the gun's history in the United States.

THE .45 ACP HORROR

The British are notorious for the small amount of ammunition they ever turned out for their military guns. And they certainly weren't building any to support civilian ownership of military weaponry before, during and after wartime. Fear

The Webley Mk VI was adopted by the British military in 1915, served through World I, and was substitute standard through World War II before finally being pulled from service in the late 1940s.

The extremely large British broad arrow "crow's foot" engraved into the revolver's top-strap, and a small N on top of the frame behind the hammer, show this gun was issued to the Royal Navy.

of civilian insurrection has always been at the heart of a lot of British political decisions. Bottom line, .455 Webley ammo was almost nonexistent even in England, and certainly not available in any sort of real quantity in other countries.

When the British removed Webley revolvers from service, rather than doing what Americans would do, sell them as surplus on the civilian market, they exported them, primarily to the United States. Gotta get those guns out of the country! Can't have the serfs owning military weapons, even old military revolvers. The very idea. How BARBARIAN. I say, Muffy, it simply isn't DONE.

Since .455 Webley was not a common cartridge in the United States (or anywhere else), the vast majority of .455 Webley revolvers ever imported into the US had the cylinders shaved to accept moon clipped .45 ACP. "Half-moon clips," invented and patented by Smith & Wesson to allow their Model 1917 military-issue revolvers to fire the American service pistol cartridge, .45 ACP (later at the Army's request S&W allowed Colt to use the same approach in their military revolvers likewise called Model 1917s) were, and are, a thin piece of sheet steel, which would snap into the autopistol cartridge's extractor groove, and held three rounds. Two half-moon clips equaled one gunload. The clips prevented rimless autopistol cartridges from simply falling down into the chambers, out of reach of the firing pin. Also, they gave the extractor star something to push against to clear empties. Decades later, "full-moon clips" would hold six cartridges, and even later still we would see clips holding only two rounds. During the time frame under discussion, full-moon and two-round clips did not yet exist, it was half-moon clips all the way.

The bulk of the clip, plus the .45 ACP's case rims behind

it, was too thick to allow the Webley's cylinder to close and turn. Therefore, there needed to be material removed from the rear of cylinder to open up a gap between it and the breech face sufficient to accept moon-clipped .45 ACP. Though the case length of .45 ACP (.898") was longer than .455 Webley Mk I (.886"), the moon clips held the cartridges far enough to the rear, they *de facto* shortened case length, thus .45 ACP would chamber and fire in a Webley.

Okay, I get it. I'm not unsympathetic to the companies importing milsurp Webleys into the U.S. in the post-World War II era. They knew no one would buy guns for which ammunition was unavailable. Since .455 Webley ammo was made of pure Nonexistium, and .45 ACP was common, and the bore diameter for the two cartridges was close enough to work, and the long Webley chambers would accept moon-clipped .45 ACP, shaving the cylinders to take .45 ACP made a lot of sense. Still, I've always felt that was a horrible thing to do to such great guns.

MY GUN

Recently, an employee at Dillon Precision wound up managing the estate of a serious military gear collector. Entire pallets, literally thousands of pounds of super-cool old guns were being trundled into the offices at Dillon Precision. Most of them would be sold at auction; a few were being bought by lucky individuals at Dillon.

Blue Press editor Mark Pixler said to me, over the phone between him in sunny Arizona and me in cloudy Washington state, "One of the guns he had was this .455 Webley Mk VI in amazing condition. Gary [Kieft, Dillon Precision's general manager, and a walking gun nut encyclopedia] looked it over, and he said it's the nicest Webley Mk VI he's ever seen."

My gun acquisition sense went on high alert. "Is it in the original .455 Webley? It hasn't been converted?"

"No, it's a .455."

"Is it still there?"

"I think it's already gone out to the auction house."

"Marrrrrk! Why didn't you call me? I've always wanted a really nice example of Webley Mk VI in the original .455 Webley. In fact, if someone were to ask me, 'If you could have any gun that's ever been made, what would it be?' that would be my answer."

"Well, I didn't know it was one of your Grail guns."

"This is THE Grail gun. Can you get it back from the auction house?"

"I'll see what I can do."

Mark hung up, two minutes later he called me back and said, "You just bought yourself a .455 Webley Mk VI." It had not yet gone out to the auction house. If it had, I would have been out of luck. I felt the hand of Fate on my shoulder.

My gun was made in 1916. Now, I'm not going to claim this is some flawless museum piece. There's minor finish wear to places like the front of the muzzle, the steel "wings" in front of the cylinder, and the domes of the higher screws. Obviously, this gun had been in and out of a holster. A couple of nice scratches to the bottom of the right grip panel. There's a mottled area along the left barrel flat that looks like, at one point, the steel had been wondering if it should rust there and decided not to. A few nicks here and there. But the bore was pristine; if this gun had ever been fired, it didn't show. All the screws were unbuggered. The vast majority of the finish was there. For a 106-year-old, World War I-era, military-issue firearm, it was in shockingly nice shape.

And it was mine. **MINE!**
BWAH-HAH-HAH-HAH-HAH!

NAVY GUN

The large "broad arrow" engraved into the top strap, as well as the "N" marking on the frame behind the hammer, shows this gun was issued to the Royal Navy. Which explains why it's in such great shape. Not only did it never see the trenches, it also probably spent World War I, and possibly through World War II, as well, locked in a ship's armory, being shot very little if at all. Then it was surplused into the U.S., instantly bought by the aforementioned collector, and never shot thereafter. That's my story, and I'm sticking to it. Given how little the Brits shot their guns in training, it's not outside the realm of possibility I was the first person to ever fire this gun since it left the factory 106 years before.

DESIGN

The Webley revolver design has a lot of positive qualities. For instance, its cylinder has gas seals at the front and rear. These prevent gas, unburned flakes of powder, lead, brass shavings, dirt, mud, or, well, anything from getting inside the cylinder, between the cylinder and the ejector rod, and causing them to bind up. Also, inside the cylinder, the ejector rod doesn't actually touch the cylinder anywhere but at the front and rear; instead, the spring that powers the automatic extractor star serves as a buffer between the cylinder and ejector rod; this also does its bit to cut friction and ensure the cylinder will still rotate, when the gun is out there in the mud, the blood 'n' the beer.

The Webley breech face is a replaceable part. Should it become cratered with use, or the firing pin hole seriously opens up, both of which would deadline other revolvers, on the Webley one can simply swap the old breech face for a new one.

Compared to most other revolvers, the Webley's trigger guard is fairly huge, and allows it to be fired even while wearing gloves (granted the gloves aren't ridiculously thick, mind you).

On most revolvers it's necessary to hit the ejector rod to remove empty casings. The Webley's spring-loaded extractor does it for you. Depress the barrel latch, which doubles as the rear sight, and break the action, the extractor star snaps out, sending empties flying, then snaps back into place. I do find it necessary to turn the gun to the side while breaking the action activating the extractor, to ensure cases clear the gun smartly; this avoids the occasional instance of a case trapped under the extractor star which can occur otherwise.

On most revolvers, removing the cylinder for cleaning requires having a screwdriver with a tiny head to unscrew the pin retaining the cylinder. On the Webley, it's freed-up by

rotating a pivoting lever, which is in turn retained by a large screw with a slot so wide it can be turned with a coin.

Revolver fixed sights are generally non-adjustable. The Webley Mk VI's front sight is removable/replaceable with units of different heights to zero the gun for elevation. In shooting my gun, it proved perfectly zeroed for windage. Those of you with experience firing fixed-sight revolvers know how rare that is. It did shoot a bit high at distance, however. Sadly, the supply of those different-height front sights seems to have dried up over the decades. Ah, well, it is what it is.

The grips on typical military revolvers do not fill in the area behind the trigger guard, which allows the gun to

The author's Webley Mk VI is marked with, among other things, its year of manufacture.

plunge in the hand when being fired, seriously screwing with shot-to-shot speed. On the Webley, an extension off the rear of the trigger guard fills in that area, preventing the gun from plunging under recoil.

The Webley Mk VI's grip is small but hand-filling. For a large-frame gun, its trigger reach is notably short, and works well even for my own medium-small hands.

Plastic grips on military pistols are notorious for shrinking with age. My gun's grips are 106 years old and haven't shrunk at all.

No one will ever accuse the Webley Mk VI of having awesome, high visibility sights. Or does it? Personally, I find that square front post and V-notch rear works amazingly well, and is WAY more visible than you'd think, when shooting fast.

Military holsters of the era tended to be made of cheap, floppy leather. The cylinder on a revolver is considerably wider than the barrel/frame, and on the typical revolver is fairly squared-off in front. This can all make reholstering the gun difficult. On the Webley, angled "wings" in front of the cylinder on either side, combined with the fact the front of the cylinder was generously beveled, made reholstering easy.

The only serious negative to the Webley Mk VI relates to its long-term durability, specifically the fact it uses V-springs for the mainspring and latch spring. The latch spring in particular is prone to breakage, and a known failure point on the gun if you use a Webley at all hard.

TRIGGER PULLS

Trigger pulls on Webleys are famously heavy, but also famously smooth. According to my NRA weight set, single action trigger pulls on my gun started at 7-3/4 pounds, then wore-in to 7-1/2 pounds. Double action trigger pulls started out at 15-3/4 pounds and have stayed there. However, the trigger pulls *per se* are EXTREMELY slick. I have seen the term "creamy" used to describe Webley Mk VI triggers pulls. And that's a darn good way to put it, actually.

WEIGHT

Let's not kid ourselves, the Webley Mk VI is a big gun. Shockingly, for its size, it's really not a terribly heavy gun. Compared to the United States military, which loads its soldiers down like pack mules then and now, the Brits seemed to have had a much clearer understanding that weight was, shall we say, contraindicated when an infantryman had to hump his kit.

I have never been a fan of long-barreled revolvers. I still remember the first time I ever held a 6" barreled revolver in my hands, early-on in my shooting career. It was a Smith & Wesson Model 66, and it just seemed to me horribly ill-balanced, with that long, heavy barrel sticking out there

waving in the breeze. The Webley Mk VI, by contrast, is well-balanced, not muzzle-heavy at all.

The Mk VI's barrel is six inches long, but it's been fluted along its top to cut weight. The gun doesn't have an external ejector rod, as do most revolvers, because the mechanism operating the ejector rod is buried inside the frame. Therefore, no ejector rod sticking out under the barrel; no front locking lug for an ejector rod either; certainly, no ejector rod shroud; this all cuts down on weight out front.

According to my postal scale, my Webley Mk VI weighs 38.3 ounces unloaded. In other words, about the same as a 1911 Government Model, maybe a bit less, despite the fact the Webley is a much larger gun. Fully loaded with six rounds of my 260-grain handloads, it goes 43 ounces even.

THE AMMO

For decades there was exactly one company on the planet still making factory-new .455 Webley ammo: Fiocchi of Italy. (Eventually, Hornady and Buffalo Bore would get into the act.) Fiocchi did one small run a year. Boutique ammunition. I'll tell ya what, years ago it was

a big deal for Fiocchi to break loose two 50-round boxes of factory .455 Webley to send me. Ever since, that ammo cooled its heels, sitting there in the ol' Thomas arsenal, patiently awaiting its appointment with destiny. I promised my little self, "One day, I'll get a really nice .455 Webley Mk VI to shoot it out of." Yeah, like THAT was ever really gonna happen. The impossible dream.

RECOIL (OR LACK THEREOF)

After the impossible dream proved not so impossible after all, those two boxes went fast. Fun was had. The first time I ever pulled the trigger on **MY** .455 Webley Mk VI, I was amazed at what a soft-shooting gun/cartridge combination this was. There's just enough recoil to let you know you've accomplished something, you get the sense you've just launched a big, heavy bullet downrange,

but since velocities are so low, it's not abusive at all. My friend, the late gunwriter Bob Shimek, referred to the .455 Webley Mk VI as "a gentle ol' punkin thrower."

Given what factory .455 Webley ammo costs, when you can find it, the only way I was going to be able to continue shooting **MY** .455 Webley Mk VI as much as I wanted was to start handloading for it. Which I have. But that's another story, for another article.

For now, I am the very happy owner of an excellent-condition .455 Webley Mk VI. Of COURSE, I had to put together a full carry rig for it. But again, that's a story for another article.

Damn it! Now I have to come up with another Ultimate Grail Gun. I've already gotten my previous one.

Many more Duane Thomas articles are available for \$5 a month at Patreon.com/DuaneThomas.

The .45 ACP cartridge (right) has a considerably longer case than the .455 Webley (left), though use of moon clips allows it to still chamber and fire in a converted Webley revolver (which the author's is NOT).

Mr. Bulletfeeder[®] by Double-Alpha

Mr. Bulletfeeder has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy – a world leader in practical-shooting-related product manufacturing and distribution – at the helm. The design allows the bullet collator to be mounted onto the casefeeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

A heavy, high-quality tray large enough for the Federal primer package. 13606, \$29.00 ea.

Dillon's Range Bag[^]

33389 \$139.99

Borrowing design features from Dillon's original range bag, but with upgraded metal D-rings and clips for the shoulder strap, Dillon's "Retro" Gray Range Bag is constructed of heavy-duty ballistic nylon.

The primary compartment measures 14-1/4" x 7" x 8" and features two interior pockets measuring 6-1/2" x 6-3/4" with hook-and-eye closure flaps. An additional interior pocket measures 5" x 7-1/2".

The top cover can be quickly secured via hook-and-loop strips at the end or by two side zippers.

There are two zip-up outer compartments measuring 12" x 8" x 1-1/2". One of the outer compartments features extra padding for carrying a handgun, and the other has an external zippered compartment for pens, pencils, etc.

"Border Shift" Ammo Bag[^]

Dillon's two-compartment ammo bag is constructed with a flexible inner liner that will allow the entire volume to be accessible from either zippered opening. You'll never again mix fired brass with loaded rounds!

New-Reloader XL750 Package

You've made the decision that loading your own ammunition is right for you. You're ready to pull the trigger, but uncertain of exactly what you need. Dillon has taken the work out of this.

We have assembled a New-Reloader Package, featuring our XL750 reloading machine, with the most popular machine options, along with the accessories you'll need to begin reloading immediately.

This package is available in 9mm, .223/5.56mm, or BOTH.

9mm 750 Package:

XL750 in 9mm
9mm Die Set
Bench Wrench
Small Pistol Casefeeder
XL 750/650 Strong Mount
Bullet Tray Kit
Roller Handle
9mm Case Gage
D-Terminator Digital Scale
Primer Flip Tray
4 Small Primer Pickup Tubes
Digital Calipers
The Complete Reloading Manual for the 9mm Luger

NEW 750 PACKAGE 9: \$ (Please Call)

.223/5.56mm 750 Package:

XL750 in .223/5.56mm
.223/5.56 Die Set
Bench Wrench
Small Rifle Casefeeder
XL 750/650 Strong Mount
Bullet Tray Kit
Roller Handle
.223/5.56 Case Gage
Dillon Case Lube
D-Terminator Digital Scale
Primer Flip Tray
4 Small Primer Pickup Tubes
Digital Calipers
The Complete Reloading Manual for the .223 Remington

NEW 750 PACKAGE 556: \$ (Please Call)

Combo Package (.223 Conversion Pictured at Right) Includes the 9mm Package Above, Plus:

.223/5.56 Conversion Kit
.223/5.56 Die Set
XL750 Quick Change
.223 Case Gage
Dillon Case Lube
Small Rifle Casefeed Plate
The Complete Reloading Manual for the .223 Remington

NEW 750 PACKAGE COMBO: \$ (Please Call)

**New-Reloader Package,
XL750 9mm**

Combo Package .223 Conversion

Dillon Die Sets

Sizing/Depriming Die (Pistol)

Our sizing/depriming dies feature a “floating decap assembly” with a snap spring that throws the spent primer off the pin and eliminates the primer “draw back” that often occurs when decapping military brass. The primary feature of Dillon’s size die design is the long, tapered carbide ring with a radiused opening. That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that’s still only a part of the story.

Bullet Seating Die (Pistol)

Our quick-disassembly seat die allows the user to disassemble and clean the seating die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We’ve incorporated a “flip-flop” seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem. Dillon’s double-ended design makes it simple to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time.

Crimp Die (Pistol)

We’ve made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you’ll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

Package of 10	21528	\$9.00
---------------	-------	--------

Sizing/Depriming Die (Rifle)

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for “squeak-free,” effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die (Rifle)

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die (Rifle)

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today’s marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

BL550[^]

Dillon's Basic Loader

\$415⁰⁰
15399
 Reloading Dies and Caliber Conversions sold separately
 Pictured with optional accessories:
 Strong Mount 22051 \$98.00

Dillon's RL550 has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles. The BL550 is essentially an RL550 without the automatic priming and powder systems.

Capable of loading over 160 calibers – just like the RL550 – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL550 loader! The interchangeable toolhead (Page 25) makes it quick, easy and inexpensive to change calibers.

AUTO PRIME SYSTEM[^] 16627 \$125.00

PRIMER SYSTEM EARLY WARNING[^]

Allows you to focus on loading instead of worrying about failing to seat a primer, and is an easy slip-on attachment to the auto prime system. 20302 \$40.00

AUTO POWDER SYSTEM[^]

Accurate to within 0.1 grain, our Automatic Powder Measure is world renowned for its charge-to-charge consistency. 20251 \$139.00

OPTIONAL MAGNUM RIFLE POWDER BAR

21353 \$47.00

AUTO EJECT SYSTEM[^]

Greatly increases your ammo production capabilities and adds a Cartridge Chute/ Bracket and a Cartridge Bin to your reloader.

22120 \$45.00

BL550 POWDER DIE[^]

Extra powder dies for your BL550 make it easier to set up additional toolheads for loading different calibers.

Powder Die: 16629 \$28.00

Oversize Die: 16626 30.00

Plastic Funnel: 16617 9.50

POWDER MEASURE ADAPTER

If you load rifle cartridges with long-grain extruded powder, you can now use any manufacturer's powder measure with 7/8" x 14 threads on your RL450, AT500, BL550 or RL550. (Requires the use of an RL450 powder die – see below.) 20029 \$35.00

RL450 Powder Die 20308 35.00

COLD STEEL

Cold Steel Kukri Machete – The extra wide blade is black powder coated with a baked-on anti-rust coating. Made from heat treated 1055 high-carbon steel. The full tang is completely injection over molded with a fine-textured high-impact polypropylene handle that will not shrink, warp, tarnish or rot. Fast and lively in the hand, and wide enough to chop through small vines or saplings, clear brush and perform in many survival or bushcraft duties. Blade Length: 13 in. Overall Length: 18.375 in.

#11851

\$39.99

KERSHAW

Kershaw Camp 10 – Kershaw Camp Series knives are ideal for clearing paths, cutting through brush and brambles, making kindling, removing and breaking down branches, cutting fodder for livestock, breaking down brush piles, and for a wide variety of tasks around the campsite. Includes glass-filled nylon sheath with gear straps and belt loop. Blade Length: 10 in. Overall Length: 16 in.

#55012

\$59.99

Shooting Mat

Dillon's shooting mat is made of tough ballistic-weave nylon fabric, with a large skid-resistant elbow pad area. The "ground" side is moisture resistant and wipes clean easily. The padding is dense, closed-cell foam to provide both shooter comfort and a stable shooting base. The mat is equipped with a shoulder strap, a carry handle and two straps with snap-release buckles.

Dillon Reloading Accessories

A **Strong Mount** increases your machine's "footprint" to over 10", spreading the load over the whole bench instead of stressing the leading edge. For XL 750/650 owners with limited overhead clearance, the XL 750/650-only mount raises the machine 6" above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL550/XL750/650	22051	\$100.00
XL750/650-only	22052	98.00
"SDB"	22223	110.00

These plates bolt directly to your bench top, and are drilled and tapped to allow mounting your reloading machine directly to the top of the mounting plate.

Stock #62005, \$100.00 is for:

XL 750, XL 650, RL 550 and Square Deal B. **Stock #62006, \$100.00** is for:

RL1100, CP2000, Super 1050 and RL1050 as well as any Dillon reloading machine that is mounted on the Dillon Strong Mount.

Our **Bullet Tray** is a simple, shallow aluminum tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL550 and XL750/650 when equipped with the RL550/750/650 Strong Mount, and a separate kit is available for the RL/Super 1050.

Bullet Tray Kit	22214	\$64.00
1050 Tray Kit	22215	64.00

The **Low Powder Sensor** provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

16306	\$55.00
--------------	----------------

Our **Toolholders** are available for your reloading machine and ensure that the tools you need to service your reloader are handy and organized. No more digging around your bench trying to find the right size hex wrench!

XL650 with Wrench Set	11555	\$46.00
RL550/XL750 with Wrench Set	11541	44.00
SDB with Wrench Set	19441	43.00

Black XL750/650	62137	53.00

The **Square Deal B Toolhead Stand** holds your SDB toolhead, powder measure, dies and caliber conversion components (*not included*) in an orderly manner.

62225, \$47.00

Our **Toolhead Stands** for the RL550 and XL750/650 are the ultimate in convenience for keeping your reloading bench clean and uncluttered.

22055, \$30.00 each

Dillon's 1050 Toolhead Stand is now available to store caliber quick changes for the 1050.

62200, \$60.00

Equipment Dust Covers are made of tough packcloth nylon and add security to your loading bench. Your reloader will be protected against more than dust as the machine covers come with a D-ring that allows the heavy duty zipper to be locked.

SDB/550 Cover	13795	\$24.99
XL750/650 Cover	10443	39.99
1050 Cover	13239	39.99
Master lock	13083	6.99

Our **Primer Flip Tray** is a heavy, high-quality tray large enough for the Federal primer package.

13606, \$29.00 each

Primer Pick-Up Tubes are used to transfer primers from flip tray to priming system. Having extras pre-loaded with primers makes it easy to load a pre-determined amount of ammo without having to stop to pick up primers.

1 Large	22029	\$11.00

"D-TERMINATOR" Electronic Scale

- 1500 grain/100 gram capacity
- Accurate to 0.1 grain/0.01 gram
- Uses four AA batteries (included)
- Comes with its own AC adapter
- 100g scale check weight included

NOTE: Dillon electronic scales are covered by a one-year warranty from date of purchase.

\$149.99
10483

Dillon's **"Belted Magnum" Powder System** features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

97126 \$220.00

The **Powdercheck System** (available for XL750/650 and Super 1050 reloading machines) sounds an alarm if the powder charge in a round is out of limits either high or low.

21044, \$99.00 each

An **Aluminum Roller Handle** gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

17950 \$65.00

Dillon's **1" Bench Wrench** fits our 1" Die Lock Rings which give you more space on the toolhead.

10842, \$15.00 each

Our **Machine Maintenance Kits** come with everything you need to keep your Dillon loader cleaned and lubricated up to factory specifications. Available alone or in combination with a spare parts kit for your machine.

Maintenance Kit Only	22211	\$40.00
w/SDB Spare Parts Kit	97015	65.00
w/550 Spare Parts Kit	97016	65.00
w/750 Spare Parts Kit	97500	79.00
w/1050 Spare Parts Kit	97018	84.00

RF100 Automatic Primer Filler

The **RF100 Automatic Primer Filler** eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run! In about two minutes the primers are inside the protective metal housing.

Large Primer Filler	97077	\$480.00

Lyman Neck Expander Die

Improves accuracy of cast and jacketed bullet reloads. Extends case life. A "Must-Have" die for the cast bullet or flat-base bullet user. The first step expands the inside of the case neck to just under bullet diameter for precise case neck tension in the finished reload. The second step expands the case mouth to bullet diameter or slightly over. This allows the jacketed or cast bullet to be started perfectly centered in the case mouth and properly aligned with the axis of the case neck. By adjusting the

plug slightly deeper, the second step also provides a slight flaring of the case mouth for reloaders using cast bullets.

Dillon AkroBins[^]

AkroBins are ideal for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550/XL 650/750 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Shellsorter

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

Bullet Profile:

Does it Really Matter?

By Kenzie Fitzpatrick

Part of reloading is finding the best bullet profile for the gun you're reloading for. There are many types of bullets to choose from, and sometimes, the only way to really know if something's going to work is by trying it. However, suppose you're reloading for a popular gun model from a major firearm manufacturer. In that case, you can bet there are a ton of people in online forums, Facebook groups, and in your shooting community that already have load data worked up for the gun.

WHAT TO CONSIDER WHEN CHOOSING A BULLET Weight

The weight of the bullet affects the velocity, the bullet's trajectory, the felt recoil of the gun, and more. Let's take three types of 9mms, for example, 115-, 124-, and 147-grain bullets. The fastest velocity out of these three bullet weights (ignoring powder charge temporarily) will be the 115-grain since they're lighter and are propelled by the gases quicker. While maybe not a huge step up, the 124-grain bullets will move slightly slower than their 115-grain counterparts. Where you see the biggest difference in velocities is between 147-grain and 115-grain bullets. The heavier bullets are slower moving through the barrel and have a much slower velocity rate as a result.

With the gap between the velocities of a 115- vs. a 147-grain bullet, the difference in felt recoil is noticeable. The heavier projectiles move slower, decreasing muzzle rise and returning your sights to alignment faster than using the lighter bullets. In polymer-framed pistols especially, using heavier bullets can make managing recoil much easier. The heavier bullets shot through a steel-framed pistol will have it feeling like you're shooting a .22LR gun.

There are pros and cons to both high and low velocities. The distance a bullet can travel before dropping is affected by bullet weight, and wind can affect the accuracy of a bullet, also dependent upon its weight. When it comes to shooting .223 rounds out to, say, 500 yards, a 75- or 77-grain bullet will perform better than a 55-grain. What you lack in velocity, you make up for in wind drift or lack thereof.

The weight of a projectile is also a personal preference. It can affect how quickly the gun recovers and what the shooter feels behind it. Let's use a pistol caliber carbine for this example. A tricked-out competition PCC usually has a competition buffer system or roller-delayed system and includes some sort of compensator that cuts down even more so on felt recoil. Plus, you're already shooting a rifle instead of a pistol, so it's much easier to control and hang onto. The preferred bullet weights for me and other competitive shooters are the 115- or 124-grain instead of the 147-grain projectiles. The faster projectiles leave the barrel quicker, cycle the bolt back faster since PCCs are blowback, and don't hold the shooter back waiting to fire the next shot. The 147-grain bullets can feel slow and, at the highest level of competition, really can make a difference.

Coated and Plated and Jacketed, Oh My!

Being in competitive shooting sports is fun, as I hear shooters argue over whether coated or non-coated bullets are better. In the end, if they run and are accurate, does the coating really matter? Sure, there are some differences in types of bullets, but if and when you find a load your gun likes, don't let someone bully you into telling you you're wrong for choosing something different than most. Jacketed bullets are for sure on the more

expensive side of the scale and shoot most accurately. Plated bullets vary in quality as the plating can come off while reloading and are most sensitive to the crimp process because of this. Coated bullets are on the cheaper end of the scale and, when loaded properly, can be deadly accurate. They do move slightly slower than lead bullets.

The largest complaint I hear and have myself with coated bullets is the increase in needing to clean your gun. The plus side, and what can make it fun, is that the pretty coating colors can make it simple to tell if your gun is dirty and needs a cleaning or if it's good to go. Overall, coated bullets are huge cost savings, feature various shapes, and are accurate to shoot. Something to be aware of is whether or not your gun will feed coated bullets. This is mostly a non-issue, but I have seen picky PCCs, and custom-built pistols jam up with coated bullets. Some popular brands of coated bullets in USPSA include Blue Bullets, Brass Money Bullets, Black Bullets, and SNS Coated, to name a few.

All Shapes are Beautiful

There are so many shapes to bullets, including your common round-nose projectiles, conical-shaped bullets, flat point, and truncated cone. Bullet shapes don't affect accuracy. The shapes can improve or impair proper feeding into the chamber. I'm going to use the pistol caliber carbine example again. I own PCCs made with barrels with a feed ramp and without a feed ramp. Because there is so much variance between PCC gun models, there could be several factors at play regarding feeding issues. That said, the bullet shape must be compatible with the gun's barrel.

Frangible vs. Hollow Point vs. FMJ

We all probably know by now the difference in types of ammunition, but the type of bullet profile you want to use

largely depends on the purpose of the rounds you're reloading. No "one design" of hollow points exists, but these projectiles are designed to expand upon impact. The expansion of many of these bullets looks like a flower bloom. They are intentionally designed for self-defense everyday carry, so if you ever have to defend yourself, the bullet will expand upon impact in the body and cause the most damage to neutralize the threat. Hollow points are expensive, but they are made to help save your life, and you most likely won't be buying these in bulk or loading them very often.

Frangible bullets are designed to disintegrate into tiny pieces when they impact a target.

They are not meant for penetration. If you plan to shoot steel targets, especially at close distances, frangible bullets are a good idea. These types of bullets are also good for training around other people and in close quarters to reduce the number of ricochets that hit other people.

Full metal jackets are among the most commonly used and popular bullets. They are the most reliable in terms of accuracy. They don't lose a lot of speed once fired. The jacket on FMJ bullets makes them feed reliably from the magazine to the chamber and upon ejection. These projectiles are also more clean shooting, not leaving as much fouling in the barrel.

FMJs are ideal for target shooting and competition shooting as they do not expand on impact.

Time to Experiment!

You know what gun you're reloading for and what purpose you're shooting for (defense, for fun, competition). Now, it's time to experiment with bullet profiles. You can make some assumptions about how your gun will feed and what bullet weight you might want to try first, but don't be discouraged if the first bullet you choose doesn't perform quite as you expected it to. Enjoy the process because achieving your desired result can take a while!

DILLON RIFLE COMPANY

The Tucker Rifle Case

This fine specimen is made with top-shelf materials that combine a classy composite quilting pattern with a rugged, laminated cotton and waterproof outer shell. The suede-like interior is adorned with fully adjustable hook and loop retention straps to keep your weapon in place at all times. It features a solid hook and loop inner spine that allows for quick attachment/detachment of the DRC Pods (sold separately). In our opinion, it has the best of both worlds, beauty and brains, what we like to call a bonafide stunner.

39 in. (l) x 3 in. (w) x 12.5 in. (h)

Made in the U. S. A.

Basic Black	40292	\$220.00
Above Average Grey	40290	\$220.00

Mag Pod

Modular, compact and perfect for organization. The Mag Pod can hold three 30-round AR style magazines or your eye pro...or some candy bars (no judgement). It features a hook and loop strip along the bottom side so it can be nestled onto the inner spine of The Tucker Rifle Case and has a coated webbing grab handle for rapid attachment/detachment. This is the perfect Pod for organizing all your gear.

The Jalapeño

You shoot a lot and your gun gets hot. Then, without thinking about it, you put your rifle into its case or someplace else equally tender. I have mauled several rifle cases, burned a car seat, and have at least one scar from doing exactly this. This is why we created The Jalapeño. Actually, we made the original The Jalapeño for the Minigun. With it, we could dump 3000 rounds in a minute or so, slip The Jalapeño over the barrel group, pull the gun off the mount and stow it right away.

23.5 in. (l) x 8 in. (w), Made in the U. S. A.

Dopp Kit

What is a Dopp Kit you ask? Well, it is perhaps our most versatile pouch. The DRC Dopp Kit (or more commonly known as a toiletry bag) is a larger pouch with a triangular construction that allows it to stand alone. It can fit up to 1000 loose 9mm rounds, your ear pro, toiletries or any other range-day items. Made with waterproof, laminated cotton and features a large, coated webbing handle. It's the one Dopp Kit to rule them all.

13 in. (l) x 4.5 in. (w) x 5 in. (h), Made in the U. S. A.

DILLON RIFLE COMPANY

The OPAR Operator Trigger is a complete-assembly pre-stage drop-in trigger purpose built to provide improved trigger pull weight, reset, clean feel, precision, and safety for day-to-day users, military and law-enforcement members and agencies. The trigger's form enhances precision capabilities through its Area-of-Engagement design. This is accomplished by helping shooters build muscle memory for their trigger-finger placement in a simple and natural way.

It has a clean 5.0 to 5.5-pound trigger pull weight with a short trigger reset. The OPAR Operator's patent pending pre-stage trigger mechanism design has an inset secondary trigger providing an additional safety mechanism to reduce the chances of an accidental discharge. The OPAR Operator is compatible with AR-15 and HK416 rifles using the Mil-Spec 0.154-inch pins.

Dillon Rifle Company
AR-15 OPAR
Operator Trigger, Curved
#11312 \$265

CED Edge Dual PCC Rifle Case

The CED Dual Rifle case gives you two in one! Two rifles and three modes of carry, all in one great PCC rifle case. Excellent protection for your expensive competition PCC and AR rifles, this case includes storage for two pistols and lots of magazines as well.

Comes with a handle, shoulder strap, and

backpack-style shoulder straps, which tuck away when not in use or can be removed if not needed.

The MOLLE PALS system across the front of the case, allows the user to add optional accessory cases to the rifle case itself.

The case measures 35.43" x 11.81" inside the main compartment.

10977 \$99.99

CED PCC Mag Storage Pouch

The perfect companion for your range bag, rifle case or backpack! Holds up to six extended PCC straight magazines of up to 42 rounds and can accept magazine lengths up to 10 inches.

Measurements are: 12.75" Wide x 11.5" High closed (open approximately 12.75" x 19.0"). The pouch pocket length is 6.25."

10978 \$15.99

CED PCC Rifle Sleeve

The CED PCC Rifle Sleeve is the ideal companion for competition stage use. It's a lightweight, water-resistant neoprene zippered sleeve that folds up easily to fit into a range bag or backpack. Perfect for covering and protecting your PCC rifle when carried in a trolley or wagon at the range. Weighs only 8 ounces and measures 33" inside.

10979 \$19.99

MAGPUL PMAG Drums

MAGPUL's PMAG drum magazines are durable, lightweight, highly reliable and made in the USA. The unique drum configuration keeps the height of the magazine manageable and allows for prone firing and easier storage. Features an easy-to-use loading lever, paint pen dot matrix for easy marking, and a rear window for instant capacity indication.

Regarding GLOCK pistol version: It is recommended that you install a new OEM magazine release on Gen 1-3 GLOCK handguns to support the extra weight of the magazine. Gen 4 GLOCK handguns will require an aftermarket metal magazine release. Installation of a new recoil spring assembly to ensure reliable feeding is strongly recommended. Individual variations between firearms may result in an extra power recoil spring being required. Use of the D-50 GL9 in pistol caliber carbines (PCC) is not recommended, because the increased length of the feed tower will be partially unsupported in most pistol caliber magazine wells. This unsupported condition may cause premature wear on the feed tower magazine catch, and (in firearms which deviate from factory magazine well specifications) may result in improper round presentation and failures to feed.

All-in-One Torque Driver Kit

Featuring the Fix It Sticks All-in-One Torque Driver. Tighten down your scope rings, mounts, actions screws, etc. while in the field, at the range, or at home. Kit includes: All-in-One Torque Driver (15 - 65 inch lbs); T-Way T-Handle Wrench; 15 different bits: T10, T15, T20, T25, [hex 3/32, 5/64, 1/8, 5/32, 3/16, 2.5mm, 3mm, 4mm, 5mm], P1, slotted #5; 1/2" Socket and 1/4" bit adapter set; and Zippered case with Molded Holder.

29835 \$112.00

Replaceable Edition Shooting/Hunting Kit

This kit offers unmatched portability, functionality and versatility. Two Fix It Sticks (which combine to form a T-Handle) and 16 bits are held in a molded bracket for portability/storage. Extra room on each end can hold two additional bits. Includes two sticks, bracket, and 16 different bits: 2.5mm Hex, 3mm Hex, 4mm Hex, 5mm Hex, T-10, T-15, T-20, T-25, T-30, 1/8" Hex, 5/64" Hex, 3/32" Hex, 5/32" Hex, 3/16" Hex, Slotted #5, and Phillips #1.

29843 \$40.00

Mini All-in-One Torque Driver

Tighten scope rings, red dot sights, mounting plates, etc. Just turn the drive handle until the hash mark lines up with the torque value you need (from 6 - 25 inch-lbs).

29837 \$55.00

All-in-One Torque Driver

Tighten scope rings, mounts, action screws, etc. Just turn the drive handle until the hash mark lines up with the torque value you need (from 15 - 65 inch-lbs).

29836 \$60.00

Scope Bubble Level Set

Level your optics with machined aluminum levels, featuring precise UK-sourced bubble vials. Kit includes: Magnetic level, NATO/Pic rail level/anti-cant device, and Protective foam carrier with pouch.

29839 \$50.00

Scope Jack

A new way to level your optic, the Scope Jack works with Any 1/4 inch driver to quickly and easily level your scope to your NATO/Pic rail. Just mount the Scope Jack to the rail under your scope and turn the drive handle until the lifting arm engages with the flat section under your turrets. Once the scope is level, maintain pressure while tightening your ring screws to keep optic level throughout the process.

29838 \$44.00

Bolt Carrier Group Scraper

Custom bit that is designed to clean carbon off the various surfaces of the Bolt Carrier Group. Works with any standard magnetic 1/4" driver. Black Isonite finish for increased corrosion resistance and strength.

AR-15 (Top) 29840 \$10.00
AR-10 29841 \$10.00

Glock Tool Kit

Glock tool kit including two custom bits designed to aid in the assembly and disassembly of Glock Handguns / Front Sights. Includes: *Glock Front Sight Tool*, a 3/16" Hex Thin Wall Nut Driver - Integrated magnet holds the screw securely in place. Machined from Solid Steel Bar Stock. Works with any standard 1/4" bit driver. 3/32" Metal Pin Punch - Punch is sized to ensure easy removal of all Glock pins by hand. Machined from Solid Steel Bar Stock.

29842 \$16.00

Remington Bolt Opener

Access your Remington 700 firing pin quickly and easily in the field with our compact custom bit. Levers the firing pin head with a "bottle opener" action. Molded synthetic polymer bushing protects bolt plug from damage.

29844 \$20.00

Master Sight Pusher™

The Real Avid Master Sight Pusher is a professional-grade tool that makes quick work of changing pistol sights while protecting both gun slides and the sights themselves. Heavy-duty, built to last and smartly designed to work on most any modern pistol sights. The oversized, ergonomic Easy Torque™ Handle partners with extra-fine drive threads to provide maximum torque with minimal effort when removing or installing sights. The Universal Press Block features multiple contact surfaces for almost any size and style of press-fit dovetail slots and sight profiles. Adjustable non-marring contact surfaces securely hold both 1911 and flat-bottom pistol slide styles.

Master Sight Pusher

Hex 5/64, 3/32, 7/64, 1/8, 5/32, 3/16

29846 \$20.00

KynSHOT

Hydraulic Recoil Buffers

The KynSHOT™ hydraulic buffers reduce recoil, muzzle rise and shoulder fatigue allowing for quicker target acquisition after the trigger is pulled. In addition, the KynSHOT buffers control the bolt carrier group operation thereby reducing excessive wear and tear on the mechanical cycling components.

KynSHOT hydraulic buffers are manufactured with premium seals, materials, and components in an aerospace grade manufacturing facility that is dedicated to quality. Each and every one of our product designs have undergone extensive impact, functionality, and life testing to ensure unmatched performance. This results in a product that can withstand and perform in harsh environments, including temperatures from -30°F to 150°F. The patented design and damping technology make the KynSHOT buffers the industry leading recoil mitigation buffer.

5.11 Tactical®

Double Duty TDU®

Trainer

Operator

The Double Duty TDU® belt is metal-detector friendly and offers two color options. Both the Trainer and Operator belts feature 6,000-pound-test buckles and heavy, reinforced stitching, therefore can be quickly converted into secure tie downs, secondary carry straps or emergency harnesses. All 5.11 tactical belts are made of strong nylon webbing and provide a stable support for carrying firearms and accessories. According to 5.11 Tactical, belt sizes run small, so they recommend you order one size up for the best fit.

BLADE-TECH™

The Blade-Tech Ultimate Carry Belt by Nexbelt is specifically designed for those who carry a firearm daily for personal defense. The PreciseFit ratchet system allows you to quickly tighten or loosen the belt in 1/4" increments up to 6" for the perfect fit – no matter how you carry. Rest assured, this will be the most comfortable and fastest adjusting belt you will ever own. The Ultimate Carry Belt has a water-resistant backing that helps prevent moisture from penetrating the outer surface and allows for extra strength and durability. **One size – adjusts to fit all.**

Large Tek-Loc™ Universal Belt Clip
40029 \$12.99

This holster is designed for an extreme high rise carry and offers the best of both worlds. Not only does it allow you to carry a full-size automatic handgun, it's also totally concealable. The unique design has Mernickle's patented stabilizer flap that goes behind the belt. This prevents the grip of the gun from tipping away from the body while doing daily activities. The high-rise position allows you to sit in a chair or vehicle without needing to take the gun out of the holster.

XHR 1911 Holster 19018 \$99.95

Designed to be the ultimate in concealed carry for those not comfortable with an Outside the Waist Band (OWB) holster – the ISP offers a great carry solution! This holster gives the appearance of a front pocket wallet and breaks up the outline of your gun. The smooth Herman Oak leather inside protects the finish of the gun, but the suede outside ensures that the holster sticks in the pocket.

SAR K2-45

CLASSIC LINES, BIGGER BORE

By Oleg Volk

A certain number of CZ75 fans have been heard saying, "Great gun, even though it's not a 45." The just-discontinued CZ97B didn't quite fit the bill: it was bulkier, held only 10 rounds, cost quite a bit more than the classic model 75, and had a more complicated take-down. Turkish gunmaker Sarsilmaz answered the call for a large-bore 75 with the K2-45, an outward clone of the classic 75B holding 14+1 of the hefty .45 cartridges.

On the outside, the K2-45 looks just like the gun that inspired it, the main difference being a wider bore. Internally, it features the same tilt-barrel lockup and DA/SA trigger. The pull weights are 4.5lbs single action and 15lbs double, compared to 5.3lbs and 12lbs of the CZ75B original. Though heavy, double action is quite smooth and can be used without a detriment to accuracy inside of 25 yards, though right-handed people with smaller hands may find a slight bias to the right. From the half-cock hammer position, double-action weight drops to 10lbs. The deep curve of the trigger provides excellent leverage for a smooth pull. Single action has a slightly mushy take-up followed by a very crisp second-stage release. With the streamlined but textured and easily accessible thumb safety lever, I'd be inclined to run this pistol in

single-action mode, reserving double action for left-hand use. The safety lever is on the left side only.

The similarity of the external dimensions is perfect, so all boned leather and molded Kydex holsters fit exactly. Although slimmer than the CZ97B, this pistol is a couple of ounces heavier. Felt recoil is, not surprisingly, entirely uneventful. With the half-inch shorter barrel and slim dust cover producing a lighter muzzle, it shows slightly more flip, but that's compensated for by faster pointing and the greater ease of holding the gun on target. K2-45's weight is almost identical to a 1911. The loss of 1/3 inch of barrel length is compensated for by the major increase in capacity, from 7+1 or 8+1 to 14+1. Lightly textured plastic grips and a wider backstrap reduce felt recoil to below the level produced by the classic 1911. K2-45 is essentially a carry equivalent of a 2011 configured for defense. The main handling differences are as follows: the safety doesn't lock the slide in battery, and the slide rides inside the frame rails. This improved the pistol's balance by lowering the center of mass but reduces the area on the slide available for grasping during racking.

Magazines proved easy to load to full capacity by hand. The mag brake leaf spring present in the CZ75B is gone, so the magazines drop free. The gun ships in a

hard plastic case with a fitted foam insert, cleaning tools and two magazines are included. Additional magazines run \$35 each, a nice break from what 2011 equivalents would have cost. The gun itself retails for only a hundred or so less than a CZ, so the larger caliber rather than the price difference is the main attraction.

The proof is in the performance, so we took this pistol to the outdoor range to go the distance. At 15 yards, all shots overlapped into one smear on steel regardless of the ammunition used. Going farther out to 50 and 60 yards, I discovered that the curved trigger makes the point of impact very dependent on the technique. All my shots were on steel, but I tended to have a noticeable vertical spread with almost no horizontal dispersion. A more competent friend got smaller and more even groups but reported that consistency of the point of impact depended very much on a firm grip on the gun. We have not discovered any real variation in accuracy between ammunition types. My guess is that the combat sights and trigger are the limiting factor more than the mechanical limitations of the gun itself. Standard white-dot sights work fine in daylight, but a luminous upgrade may be in order

for defensive carry. The pistol ran reliably with a wide variety of loads, from plastic/metal dust ARX range ammo to powder-puff 200-grain plated target HP to regular 230-grain ball to high-pressure 185-grain defensive JHP. Recoil was mild enough to be a non-issue. Follow-up shots were about as quick as with the 9mm variant, and faster than with a 1911. Up close, rapid fire proved effective as the muzzle returned to point of aim consistently and quickly, without sideways or vertical bias. The micro-adjustable rear sight makes regulating to specific ammunition at long range quick and easy, but the sight assembly remains streamlined and snag-free.

The K2-45 proved to be a competent reimaging of the classic CZ75 concept in a large bore. After the first couple hundred shots, the internals showed no signs of wear or "working in," suggesting that all clearances and parts fitting were done right from the factory. Fit and finish are good, a step above the original Czechoslovak CZ75 pistols. If you like European pistol design but prefer the orthodox American .45 caliber, this gun is for you. Going from 9mm to 45 ACP with the loss of only one or two rounds of capacity strikes me as a pretty good deal.

Nighthawk Custom Drop-In 1911 Trigger System

When looking to upgrade the performance of a 1911 pistol, a common improvement sought by shooters is a high-quality trigger job, with a crisp, clean break. Until now, a high-quality trigger has never been in the realm of a "drop-in" upgrade. Nighthawk Custom has changed that with the introduction of its Drop-In Trigger System (DTS) for 1911 pistols.

An all-in-one unit, the DTS replaces your existing hammer, hammer strut, sear, disconnector, and sear spring. Your existing sear pin and hammer pin will be retained for use with the DTS, but no other parts are necessary for installation. With a steel housing securing the unit, the DTS features all Fully Machined™, stainless steel internal components. The traditional three-pronged sear spring is no longer necessary as the springs for the disconnector and sear are built into the unit. A single-leg grip safety spring is included with the DTS to replace the existing sear spring.

The DTS is designed for use in most 1911 models, and installation is simple enough that minimal gunsmithing skills are necessary.

*AFC = Anti-Friction Coating

My “Priceless” \$150 Revolver

By Jimmi Bonavita, Photo by Chris Columbus

Vincenzo Bonavita, my grandfather, though small of stature, was a fiercely independent and a resourceful individual of immense physical and psychological strength. He emigrated (illegally) to the United States in 1901 from Avellino, Italy (oddly the same town where HBO’s fictitious Sopranos family were supposedly from). He began his journey as a stowaway on a cargo ship out of Naples, was discovered *en route*, and dropped off on the island of Trinidad off the Venezuelan coast, where he then hired on as a crew member on a cattle ship bound for New York. Once in sight of the Ellis Island, however, being “without papers” (the origin of the ethnic slur “WOP”), he jumped overboard and swam to the Jersey shore. There he connected with contacts in the Newark area (Again, the very same New Jersey community where the HBO’s fictitious Sopranos also supposedly lived!).

Once settled, he started his construction company, employing only his closest family members, and eventually including his in-laws. Many of the houses and businesses that burned down during the Newark riots July 12-17, 1967, were built by his construction company consisting of my grandfather, father, uncles, great uncles and cousins. My immediate family just happened to be there on summer vacation at the time, and we were all at my “Uncle” Bob Russo’s TV shop on Bloomfield Avenue where the riot began. I saw it all happen in real time, and trust me, it left quite an indelible impression on my developing, fourteen-year-old brain!

Born and raised in Southeastern Virginia-Northeast North Carolina, where my mother’s family settled in the 17th Century, I spent every Thanksgiving, many Christmases, and half of each summer holiday with my father’s family in and around the Newark, New Jersey area. No two different worlds ever existed: the people, language, sights, sounds, food, and especially the subject of firearms! In Virginia, I was presented my first rifle and taught to shoot by my dad at six years old in the summer

before I started the first grade. I already had a decent gun collection begun by the time I was ten years old, which was about the same time I started professional instruction at the feet of several champion U.S. Navy and Marine Corps shooting team members in Norfolk, setting the course of my lifetime passion. In New Jersey, if you owned any firearms, you didn’t talk about them because they were probably illegal, and therefore usually well-hidden somewhere in the basement, or between two attic joists, only to be removed when needed. Although I own “many” firearms today (“if you know how many you have, you don’t have enough”), like most reading this, I have one that holds a special place in my heart that soars high above all the rest. And wouldn’t you know, it

happens to be the cheapest, seemingly least-desirable firearm in my entire collection!

Born on February 28, 1913, my father, Michael James Bonavita was the third of the five children of Vincenzo and his wife, Grandma Rose Marie Maino. Grandma worked in her parent’s Italian bakery/pastry shop in Plainfield, New Jersey. It was always Grandma’s policy to keep each of her

successive infant children in a crib close by her in the bakery while she worked. In the spring of 1913, when my father was only a couple of months old, he was in his crib one morning when a group of Romani Gypsies (often referred to as “Roma” by Europeans) entered the store. Yes, I’m talking about the same nomadic, garishly dressed, tambourine-banging Gypsies of the Werewolf movies, complete with the ornate, horse-drawn wagons they traveled and lived in. They immediately and excitedly started ordering a multitude of different pastries and cakes, most of which were not on display, shouting and pointing and necessitating that my grandmother go into the back room to get additional containers and try to assemble their order. When my grandmother noticed that things had gotten unusually quiet in the shop, she came out of the back room to find all the Roma Gypsies gone, along with my father!*

As there were very few automobiles (certainly none in our family), and very few phones (my family didn't have any of these, either), my Grandma had to run on foot across town to my grandfather's construction site to summon him. After frantically explaining what had happened, my grandfather decisively (and most characteristically) appropriated a nearby horse and buggy and made tracks to their home where he retrieved his handgun, a nickel plated "Thames" (Hopkins & Allen) .32 S&W caliber five-shot revolver. After arming himself, he backtracked to the bakery and started tracking (literally) the Gypsy wagons that by now had several hours' head start. The story goes that even though the trail was cold, my grandfather eventually was successful in locating the whereabouts of the Gypsy camp, where festivities were underway, sometime the next day. He stopped the buggy in an inconspicuous place on the edge of the camp, drew his revolver and went searching for the "headman" in charge. As the story goes, he located the leader in short order, grabbed him in the powerful grip of one hand and placed the barrel of the revolver against the man's temple with the other, and while increasing pressure on the trigger, demanded his son to be returned to him, "Or else." My grandfather was not a very humorous man, and although short, he was very heavily muscled and very serious. Everyone who knew him agreed he was not a man to be trifled with, nor one who bluffed. There is no doubt in my mind that the headman's life hung by a thread. As ordered, several hysterical Gypsy women retrieved my father forthwith, still wrapped in the blanket from his crib, and brought him to my grandfather, who held my father in one hand and continuing to point the revolver in the other, slowly backed his way to the horse-drawn buggy, climbed aboard, exited the camp, and headed immediately home. It was very late that night or early the next morning when he arrived home with Dad in tow. Of course, by this time my grandmother was a basketcase, never expecting to ever see my father again.

Beginning in 1950, before I was born, my parents started visited our relatives in New Jersey several times a year, and after I was born in 1953, we spent every Thanksgiving vacation, many Christmases and New Year's, and part of each summer vacation with them in Newark, Belleville or Nutley, New Jersey, usually at my grandmother's house. The Morella family, consisting of my Uncle Pat, Aunt Molly, and cousins Joey and Patty, lived with her. Our Buick Sport (station) Wagon was always piled high with luggage and crates of food from Virginia: Smithfield hams, burlap sacks of sweet potatoes and black-eyed peas, items that were not then available up north, but that we brought to our Italian relatives in New Jersey that had acquired tastes for them! Of course, we would then return to Virginia with equally large quantities of canned Italian tomatoes, tomato paste, Italian pastries, New York cheese-cakes and other ethnic goodies likewise unavailable in

Virginia in those days! One of my fondest recollections of arriving at my grandmother's house in New Jersey was the sight and sound of grandma at the front door laughing and shouting "The Virginia Gypsies are here! The Virginia Gypsies are here!" alternately in Italian and broken English, until we made it up to the front steps!

I had always thought she called us "The Virginia Gypsies" because we looked so much like a band of Gypsies traveling in a car stacked high with packages. But in the summer of 1969 when I was 16 years old, I asked my uncle Patrick Morella why she always referred to us that manner? Typical of a man of few words, my uncle simply asked me to "follow him down to the cellar" where he dug around in the bottom of an old, dusty trunk, and withdrew a moth-eaten towel, lovingly wrapped around my grandpa's old revolver, which he presented to me. (Many, if not most firearms, then as now, are kept thusly hidden in New Jersey!) There, in the dim light and dank air of the basement, he recounted the above story in great detail. I was so sure that he was spinning me a tall tale that I asked all my other relatives for confirmation. My aunts Molly and Louise (Florio) another of dad's sisters, my Uncle Carmine (dad's older brother) and my Grandma all repeated the very same story... verbatim. They further explained that growing up, my father was often referred to as "The Gypsy." I then realized that "Virginia Gypsies" was actually in reference to my father. My aunts further explained (between giggles) that, whenever dad would get into mischief at school or in the neighborhood as a child growing up, Grandma would approach Grandpa and accuse him of kidnapping back the wrong baby! "You brought me back a Gypsy baby!" my grandmother would scream! Thus, we were always... the "Virginia Gypsies."

My little 19th Century Thames/Hopkins & Allen Hammerless .32 S&W revolver, serial number #4128, is without a doubt, the most coveted firearm in my collection. It occupies a special place in my safe, and in my heart. I literally wouldn't sell it for a million dollars. It is priceless... my \$150 revolver.

** It needs to be mentioned here that the kidnapping of children by Roma Gypsies, especially in Europe in the late 19th and early 20th Centuries, was rumored to have been a fairly common occurrence. As close-knit and exclusive as the Gypsy community was, the story usually goes, there was little opportunity to introduce "new blood" into their closed society, and inbreeding was a constant concern. It was (and still is) very common for Italian parents to scare their children and grandchildren by insisting they are in constant danger of being kidnapped by "Roma Gypsies." I heard it many times growing up in the 1950s and 1960s myself. However, some writers today, such as Peter McGuire of the Huffington Post (re: "Do Roma 'Gypsies' Really Abduct Children?" published 10/24/13) dismiss it as nothing more than folklore and myth. Maybe Mr. McGuire should have consulted with my family before publishing his article, because it certainly happened once right here in the United States of America... in the State of New Jersey! Really!*

Real Avid Gun Tools & Cleaning Gear

Smart Mats™ are cleaning mats on steroids. The no-slip backed padded mat features an oil-resistant surface. It allows you to properly clean your gun without ruining the kitchen table and is large enough to handle field-stripped guns. The ingenious magnetic parts tray ensures your pins, screws and springs are never lost again. This is real world gun cleaning taken to the next level.

Real Avid MASTER GUN VISE™

MULTI-AXIS BENCH-MOUNT VISE WITH TORQ-LOK™

One vise to rule them all. The first real bench vise made exclusively for guns and gun tools. Whether you're building and customizing, repairing and cleaning or mounting scopes and accessories, this vise improves every part of the GUN DIY® experience. Quickly reposition your gun to any orientation without ever removing it from the vise. Insert the Torq-Lok pin for applying heavy force. Use the removable and reversible Gun-Fit jaw sleeves (*not pictured*) for a specific gun grip or turn the leveling knob for simple scope mounting and leveling. Build. Customize. Repair. Mount. Clean. All hail the King....

10135

\$299.99

Real Avid AR15 Bolt Catch Pin Starter & Pin Punch Set

Two punches, one simple solution to the difficult-to-access bolt catch retaining pin. The orientation of the pin, close proximity to the lower receiver, distance required to safely punch a pin, and the difficulty in getting the pin started makes it a real pain with standard punches. Our simple solution is specially designed to fit flush against the receiver without damaging it, and is long enough to reach the pin. It features a roll pin punch for removing pins and a magnetized roll pin starter punch that eliminates the need for a third hand. Smart, simple, frustration free.

\$79.99
119.99

Real Avid Level-Right™ PRO

A level reticle is critical to long-range accuracy. For longer shots a canted reticle will pull or push a bullet's trajectory off of vertical center. It gets worse the more the distance increases. A level scope means that the reticle will be perfectly aligned with the rifle bore. Balancing small levels on a scope turret and gun receivers has been a commonly accepted

practice for years. Not only is this a clumsy process, it's wrong. The turret on most scopes is not perfectly aligned with the reticle, so even if your turret is level to the gun, your scope may not be. Level-Right PRO simplifies scope alignment in four easy steps. Accurate and intuitive, this instrument quickly aligns the actual scope reticle to the horizontal gun plane, which is key to the long-range accuracy of your rifle. Level-Right PRO helps you quickly and confidently mount a scope for maximum accuracy.

Level-Right PRO

Slip 2000 Products

725 Gun Cleaner Degreaser

should truly be called Super Degreaser. This water-based cleaner will cut through the toughest cosmoline, carbon, grease and grime! Its super strength allows it to degum and degunk the dirtiest of gun parts when sprayed on or used in parts washers or solvent tanks! **NOTE:** To help prevent rusting, users must apply a gun lubricant immediately after cleaning to disperse any moisture in parts.

16 Oz. 19237 \$24.00

Slip 2000 Carbon Killer

provides you with a safe, effective way to clean carbon, lead and plastic wad fouling. Unlike other gun cleaners, this product is non-flammable, non-hazardous and biodegradable. Designed for soaking metal parts with baked on carbon, Carbon Killer dissolves carbon and lead on contact. **NOTE:** Carbon Killer is for cleaning internal metal gun parts with baked on carbon by soaking them. It is an aggressive cleaner and should not be used to clean the outside of your gun. It can damage and even remove some finishes.

15 Oz. 19234 \$24.00

Slip 2000's **Extreme Cleaning System** contains 2 Oz. bottles of: Carbon Killer Bore Cleaner, 725 Gun Cleaner Degreaser, and EWL Extreme Weapons Lubricant.

11652 \$28.00

Slip 2000's **AR Cleaning System** contains a 7 Oz. bottle of Carbon Killer Bore Cleaner, a 15cc syringe of Extreme Weapons Grease, and a 1 Oz. bottle of EWL Extreme Weapons Lubricant.

11676 \$22.00

Slip 2000 **Extreme Weapons Lubricant (EWL)** was designed for use on chain guns and machine guns like the MP5 and the 249SAW. It contains a proprietary Anti-wear agent that reduces friction and wear by 90-95 percent. It is an excellent CLP and is able to clean, lubricate and protect.

4 Oz. 11644 \$21.00

Slip 2000 **EWL30** has the same properties as EWL, except it is a lot thicker. It contains a proprietary thickening agent that makes this lubricant consistency like a 30-weight motor oil. It was designed for those who want or need a lubricant that will not migrate at all and don't want to use a thick grease.

4 Oz. 11645 \$24.00

Slip 2000 **Copper Cutter** is specially formulated to remove copper, lead, powder residue and plastic wad fouling from bore surfaces with little scrubbing! **NOTE:** It is a water based, ammonia enhanced product and will remove all lubrication or oil protection, so always re-lube all parts cleaned.

4 Oz. 11646 \$14.00

Each Slip 2000 **Gun Wipe** packet contains one 5" x 8" wipe treated with Slip 2000 Synthetic Gun Lube. Perfect for wiping your guns down after a day on the range or while out on a hunt. Apply to all metal surfaces. Great for light carbon cleaning. Safe for all firearm stocks and grips.

20 Pack 11674 \$17.00

MIL-COMM Extreme Performance Lubricants

TW-25B is the choice of leading firearms manufacturers, armorers, pro shooters and gun enthusiasts, and is recognized as the world's best all-purpose weapons lubricant/protectant. It is now widely specified by the U.S. military for their most critical performance weapons systems. Environmentally safe, non-carcinogenic, non-ozone-depleting.

0.5 Oz. Syringe	15732	\$14.99
1.5 Ounces	15731	18.99

Brian Enos' Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it. Slide-Glide Standard is for use in warm weather (F60°+), Lite is a thinner viscosity for lower temperatures (F30°+).

Slide-Glide Standard	15571	\$7.99
Slide-Glide Lite	15572	7.99

Sweet's 7.62

Sweet's Australian 7.62 Solvent easily removes powder residue and stubborn copper fouling. It's harmless to steel, a non-acid formula with five percent ammonia.

John Marshall on Classic Firearms: The Springfield Model 1866 Rifle and the Wagon Box Fight

The open trapdoor action of the
Springfield Model 1866

By John Marshall

In 1866, the year after the U.S. Civil War had ended, the individual weaponry carried by our soldiers on the western frontier was pretty much the same as that used during the Civil War. The standard long arms were muzzle-loaders, with a maximum rate of fire of about three shots per minute. Reloading and ramming powder and bullet down the bore of a very long rifle usually required the soldier to stand up, exposing himself to enemy fire.

On December 21, 1866, the disadvantages of these antiquated weapons contributed to a disastrous defeat for U.S. soldiers facing Native American warriors in the territory of Wyoming. Since then, it's been widely known as the Fetterman massacre. A detachment of 81 soldiers was ambushed and completely wiped out. It was the worst military disaster ever suffered on the plains until that time.

The soldiers faced a group of Lakota, Cheyenne and Arapaho tribes when the U.S. was on a military mission that was intended to protect travelers on the Bozeman Trail. Their main detachment was based at Fort Phil Kearny, Wyoming. The setup for this tragic conflict involved a plot by the tribes to lure soldiers into an ambush.

Chief Red Cloud and other leaders, having had successes with ambushes before, decided to launch a large operation against Fort Kearny before the winter snows. They chose a force that would be adequate to destroy any detachment of soldiers that might be sent to chase a small decoy group. That force probably numbered more than 1,000 warriors. Gathering about 10 miles north of Fort Kearny, they decided the best place for an ambush

was along the Bozeman Trail north of Lodge Trail Ridge. It was a location out of sight, and about 4 miles north of Fort Kearny. The Cheyenne and Arapaho took up positions on the west side of the trail and the Lakota on the east. The trap for ambush was set by young chief Crazy Horse and a small group of 10 warriors. They revealed themselves to a group of soldiers on picket patrol with a group guarding a wagon train that was collecting lumber for construction and firewood.

Flag signals from soldiers on picket duty at the top of nearby Pilot Hill alerted Fort Kearny that a wagon train was probably vulnerable to attack. A relief party was ordered to investigate the scene. By claiming seniority as a brevet Lt. Colonel, Captain William J. Fetterman asked for and was given command of that party, which numbered 81 officers and men. The infantry was ordered to move out. The cavalry had to retrieve their mounts before they could join them and failed to get started before the ambush began. Heavy firing was heard back at the fort, and then silence.

A force of about 75 men then set out to find the Fetterman group. As they advanced to the top of Lodge Trail Ridge, a few warriors approached the soldiers and taunted them. Another 42 soldiers soon joined that force, and they went on with their quest. Then the tribes in the valley slowly dispersed and disappeared. The dead bodies of Fetterman and all his men were found in the valley. They had been stripped naked and mutilated. That afternoon, wagons were sent to bring the bodies back to Fort Kearny.

Needless to say, changes had to be made to make the

U.S. forces better equipped to face superior numbers in the field. It appeared that the use of breech-loading rifles would enable greater firepower.

In early 1867, seven hundred new rifles were issued to the troops at Fort Kearny. The new gun was the U.S. Springfield Model of 1866. The rifle was the brainchild of Springfield Armory master armorer Irskine S. Allin. After experiments with converting Model 1863 muzzle-loading rifles to breechloaders with the short-lived .58 rimfire "trapdoor"-breeched Model of 1865, Allin devised a similar but more efficient breech system that used a U-shaped spring for a snappy ejector, replacing a gear-driven device that was not well accepted. The .58 caliber barrels of the Model 1863s were bored out to accept a brazed-in liner that was then bored and rifled for .50 caliber centerfire cartridges, today known as .50/70s. The Model 1866 breech was a "trapdoor" design similar to the that used on the Model of 1865 that pivoted the breechblock up and down into a hollowed-out section at the rear of the barrel. The breechblock was secured by a hinge strap fastened to the barrel with two screws and solder. A lever on the side of the breechblock locked it into place and released it. The spring-loaded firing pin in the breechblock was struck by a flat-faced hammer. This was a relatively simple conversion to breechloading and enabled skilled users to fire a dozen or more shots per minute. This rifle was the very first standard breechloading center-fire rifle to be issued to our military services.

The first significant combat test of this new rifle occurred on August 2, 1867. It was at a battle that became known as the Wagon Box Fight, a six-hour event of the Indian Wars that has become legendary in U.S military history.

The hundreds of infantry and cavalry soldiers based at Fort Phil Kearney needed a constant supply of wood from the forests on the slopes of the Bighorn Mountains not only for further construction at the fort, but also for fuel for cooking and winter heating. The job of protecting the contracted civilian woodcutters was a prime mission for the soldiers. The main wood line in the area was about six miles from the fort. Wagon trains, woodcutters and their soldier guards were constantly subjected to small harassing Indian attacks during the two years that the fort existed.

The Indian warriors, having succeeded handily with the Fetterman massacre, decided to go for another large attack. They held a considerable advantage because the woodcutters and soldiers had been splitting into two groups. The woodcutters usually stayed at a camp near the wood line, about a mile from a corral the soldiers had put together from 14 wagon boxes, removed from their running gear and set on the ground. Logs were routinely

run from the woodcutters' camp to Fort Kearny resting directly on only wagon running gear.

The wagon box corral served as a refuge from possible attacks in the field. Each wagon box was ten feet long, two and a half feet high and four and half feet wide. The wood making up the sides of each box was only about an inch thick. Chief Red Cloud decided that making a successful attack on any group in this makeshift corral would be a pushover.

Captain James W. Powell was in command of the protective forces at the woodcutting site, and he deployed his men at the corral. Early on August 2, Powell sent 13 men out to guard the woodcutter's camp, and another 14 to escort logs being carried to the fort. Remaining at the corral were Powell and Lt. John C. Jenness together with 26 enlisted men. There were joined there by two civilian teamsters who had left the fort earlier to hunt deer. These teamsters had seen Indian smoke signals, so they abruptly left their hunting activity and quickly ran to the corral.

The Indians moved forward. They first scattered the woodcutters' mule herd and set fire to their camp. In the process, three soldiers and four civilian contractors were killed. Powell diverted the Indians' attention by launching an attack on the rear of the Indian force by some soldiers from the corral. This allowed most of the men at the camp to hide in the forest and then retreat to Fort Kearny. In short order an estimated 800 Indians on horseback and hundreds more on foot surrounded Powell and his men back at the wagon box corral. The men at the corral were now armed with their recently delivered Springfield Model 1866 breechloaders, and the group had approximately 7,000 cartridges on hand. Although they had devoted little time to target shooting since the guns were issued, most of these men had handled and familiarized themselves with their new weapons in the weeks since they had been issued.

The soldiers had punched holes in the wooden wagon boxes so they could fire through them. Anything available – kegs, bags of grain, yokes and other equipment were stacked between the wagons. Besides using the holes in the wagons, some men fired over the tops of them. Some covered themselves and the wagon tops with blankets to hide their positions. Despite the blazing sun, many men removed their hats, filled them with cartridges and kept them nearby. At a signal, hundreds of warriors on horseback led by Red Cloud's nephew charged the wagon boxes.

While most of the Indians were armed with bows and arrows, lances and war clubs, a good number had firearms captured months prior during the Fetterman massacre. However, their ammo supply was not extensive. In addition to the withering heat from the sun, the wagon box

group had to put up with really foul odors. Some of the Indians had coated their arrows with burning pitch that set fire to hay and mule and horse dung.

Surprised by the vastly improved firepower of the new rifles, the initial wave of mounted Indians retreated about 600 yards from the corral and over the course of the next several hours, separate futile attacks were made on foot.

The soldiers reported that a small number of Indians made it to about five feet from the corral, but none made it through. Captain Powell commanded at one end of the corral while Lt. Jenness was in charge at the other. Lt. Jenness was sadly shot through the head and killed. Two privates also lost their lives during the continuing assault on the wagon boxes.

Teamster R.J. Smyth later related Jenness' bravery. "Lt. Jenness had just cautioned me not to expose my person, and to hold my fire until I was sure of getting an Indian at each shot. He had moved a few feet from my box when he was shot through the head; I think he died instantly. He was a grand, good man, and a fearless officer. I told him to keep under cover. He stated that he was compelled to expose himself in order to look after his men."

One man, 18-year-old Sgt. Samuel S. Gibson (the youngest man at the corral), recorded the following: "The whole plain was alive with Indians shooting at us, and the tops of the boxes were ripped and literally torn to slivers by their bullets. How we ever escaped with such slight loss I have never been able to understand, but we made every shot tell in return and soon the whole plain in front of us was strewn with dead and dying Indians and ponies. It was a horrible sight. The Indians were amazed at the rapidity and continuity of our fire. They did not know we

had been equipped with breech-loaders and supposed that after firing the first shot they could ride us down before we could reload."

Powell expected that another band of several hundred Indians who had been watching the battle would join in. However, he heard a howitzer shell hit, and then saw a rescue party of about 100 men led by Major Benjamin Smith approaching. Although the shell fell short of the Indians, a number of approaching mounted Indians were startled and they turned and fled. Quickly thereafter, the remaining Indians all retreated.

Major Smith was shocked that most of the men in the corral had survived. "It was a hard lot to look at. The smoke from their guns had colored their faces and they looked as though they had used burnt cork on their faces." The men were elated to find that the post surgeon had brought along a keg of whiskey and shared a big drink of it with each man.

Accounts of the battle varied widely, but a Sioux medicine man later stated that the total of Indian dead and injured was 1,137, a number later verified by a similar estimate from Red Cloud in 1885.

Examples of the Springfield Model 1866 rifle are still around and are considered classic firearms from the Indian Wars era, mostly due to their employment at the Wagon Box fight. Both the United States Army and Native Americans learned lessons from this event. Those lessons undoubtedly influenced the outcome of another significant battle at the Little Bighorn in Montana in 1876. You may have heard of it and a particular cavalry officer who died with the main force of his men there – George Armstrong Custer.

America's Problem Is NOT Guns

It's the Abundance of Homicidal Maniacs

By Alan Korwin

The new-fangled left-wing system of drastically reducing law enforcement and criminal prosecutions makes a bad situation worse and helps hide ugly truth. Biased story selection helps leftists blame guns for crime – instead of criminal perps who are frequently on the left. Meanwhile, the right side gets little ink, for self-defense and crime deterrence. Media's focus on aberrant social misfits distorts the nation's perspectives.

One popular T-shirt says, "America's 100 million gun owners killed no one today." Virtually all American gun owners can truthfully point out that, "My guns have never killed anyone." You know that when mass media reports about shooters, they're not talking about you, going to the range to practice. You think of yourself as a shooter, doing the right thing, sharpening your skills.

No, you know when the media misuses that word shooters, they're talking about murderers, homicidal maniacs, psychopaths and violent criminals on a killing spree, not you. They use your word that describes

something good, to demean and denigrate all of us, and help equate us with killers in the public eye. They use righteous people who keep and bear arms to promote civilian disarmament. Shame on them.

When asked why
the Associated Press
doesn't cover self-
defense stories, the
answer was abhorrent.
They don't want to
encourage copycats.

The Second Amendment Foundation, without so much as a whisper from lamestream press, is running nearly 50 cases against jurisdictions that, with impunity, have enforced unconstitutional edicts against the precious right to keep and bear arms. So many of the inconsistent, illogical and flat out infringing policies and statutes can no longer stand, with the High Court setting the record straight in *NYSRPA v. Bruen*. The Second Amendment is not a second-class right. It cannot be judged under intermediate or rational-basis scrutiny, both legal metaphors for, "We can do whatever we like, you have no rights unless we deem it so." Our right to arms is a fundamental right, and must be viewed under strict scrutiny, no tomfoolery allowed.

How we wish the vaunted NRA could vigorously fight back against the tide of unlawful gun restrictions, that are now overturned by the U.S. Supreme Court decision in *Bruen*. But that

organization has become so beleaguered by legal assaults on their structure, finances, leadership and very concept, they can barely keep their heads above water, let alone mount multiple cases now that Bruen has changed the playing field. The playing field is now level, with constitutional rights holding their proper place in the scheme of things. Corruption on the left is made all the more apparent, as they shuck and jive attempting to do an end run around rights, law, history and the clear wording of the Bruen decision itself.

So many of the crime stories reported by the media, mislabeled mass shootings to instill fear and vilify gun ownership, happen so far from you they are barely relevant. Do criminals committing murder 2,000 miles away really need ink in your hometown? Life would be different if the “national news” stuck to national affairs and left the local crime blotter to local affiliates and local rags (a term of endearment for locally based print outlets). That’s rhetorical, of course the nation would be better off.

The Uvalde and Buffalo psychotic school tragedies, reported so widely and constantly that you know what those cities now refer to, missed the best part of those stories. Within weeks of each event, armed citizens shot and stopped psychopaths about to act out in crowds. Countless lives were saved, tragedies avoided, and long-winded stories featuring (praising? promoting?) villains were quashed. When asked why the Associated Press doesn’t cover self-defense stories, the answer was abhorrent. They don’t want to encourage copycats.

What do they think they are doing by running saturation coverage on school assaults? Exactly – they know full well. By promoting murderers endlessly, they help assure an ample supply of more. If self-defense stories would inspire copycats (a good thing), the logical

conclusion is that senseless brutality stories encourage more of that (a very bad thing).

Seeking fame and 15 minutes of glory, kids, numbed to death about death and destruction through video games and modern culture, plus insanely violent movies and TV – of course some will act out. Denying this to protect reporters’ turf is practically criminal collusion. These bad actors – murderers – typically lack parental controls and family norms, especially from missing Dads. They are encouraged, yes encouraged, to steal guns, or get them

legally from someone who can make a retail purchase, then act out in hopelessly immoral ways. They’ve never learned about morality, which might touch on a Higher Power and consequences, so has been banned from the school system, now institutionally corrupt. There certainly is precious little that constitutes good moral values available in the pop culture foisted upon our youth.

Crime reports never include the positive and desirable daily uses of firearms. Ask a reporter, “Do you ever cover the good that guns do?” A typical response is, with raised eyebrow, “What do you mean ‘the good that guns do’?” They don’t know. They unethically cover one side only. It happens enough that police have a term for criminals shot by citizens – the good-ride dance factor.

For many years, April was Ethics Week, led by The Society of Professional Journalists

(spj.org). Like ethics themselves, Ethics Week (and SPJ!) has atrophied. It’s time to bring it back, restore faith in mass media, and present a realistic image of crime, guns and good citizenship.

Award-winning author, writer, consultant and musician Alan Korwin has written 14 books, ten of them on gun law, and has advocated for gun rights for nearly three decades. Now writing his 15th book, Why Science May Be Wrong, see his work or reach him at GunLaws.com. 

The Second Amendment Foundation, without so much as a whisper from lamestream press, is running nearly 50 cases against jurisdictions that, with impunity, have enforced unconstitutional edicts against the precious right to keep and bear arms.

DILLON: A MEMOIR

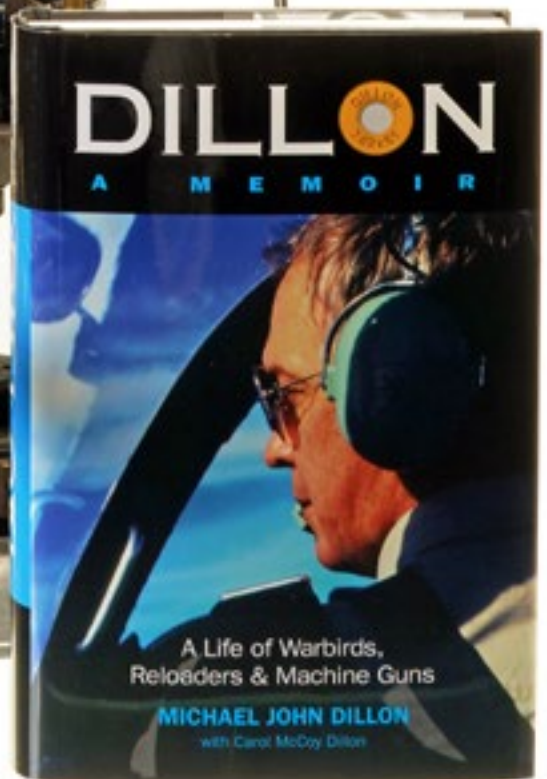

Read the story of Mike Dillon's journey from washing aircraft for a crop-dusting company, to airline pilot, to creator of The World's Finest Reloading Equipment, and ultimately, to the man who revolutionized the M134 Mini-Gun!

Along the way his adventures included restoring a P40 Warhawk, fighting wildfires in WWII-era bombers converted to drop fire retardant and writing articles about flying warbirds for *Air Progress* magazine.

Not content to rest upon his laurels for creating the World's Finest Reloading Equipment, Mike finished out his career by re-engineering the M134 Mini-Gun, helping to arm the US and its allies to fight the War on Terror across the globe.

Mike's memoir is a compelling read: the story of a man who believed he could do anything he set his mind to, and actually did it!

Pictured here are the original 1928 Navy Overstamp Thompson submachine gun Mike inherited from a friend who died in a tragic plane crash and a Star Machine Works reloader with Mike's "Super Star Conversion." These two items inspired Mike Dillon to found his own reloading equipment company. Read the book for details about how it happened.

ERADICATES COPPER FOULING AT ANY VELOCITY.

TEMPERATURE STABILITY AT ITS FINEST.

Legendary IMR Enduron® powders are engineered to eliminate copper fouling, regulate insensitivity to temperature changes, and give the ideal loading density, all while staying friendly to the environment. These versatile, match-grade propellants are the slow-burning, copper-crushing magnum powder shooters want.
