ATTENTION DILLON CUSTOMERS: Because of changes to California's Proposition 65 that took effect on August 30, 2018, companies doing business in California are mandated to provide warnings on products that may expose Californians to any one or more of a list of approximately 900 chemicals, including Lead, which are "known to the State of California to cause cancer, birth defects or other reproductive harm." The new regulation states that a warning must be "provided in the catalog in a manner that clearly associates it with the item being purchased." Though we have no reason to believe our products could cause harm when used as intended, we now include the appropriate Proposition 65 warnings on some of our products to meet the California "safe harbor" requirements.

Dillon's Bill of Rights for Reloaders

All of Dillon Precision's customers have certain inalienable rights when they buy a reloading product:

- 1. Right of Quality** – YOU THE CUSTOMER have the right to expect a well-designed product, manufactured with quality materials and workmanship that does what the seller claims it will do.
- 2. Right to Test and Send-Back** – YOU THE CUSTOMER should have the right to test the product on your own reloading bench for at least 30 days, and if it does not live up to your expectations, send it back for a full refund.
- 3. Right of Service** – YOU THE CUSTOMER have the right to free, friendly, expert service and technical advice available through a toll-free phone number. This service should include prompt replacement of broken or bad parts – free of charge.
- 4. Right of Warranty** – YOU THE CUSTOMER have the right to a lifetime warranty on any non-commercial-grade reloading product you purchase. *Unfortunately, we can't offer this warranty on textile products and electrical or electronic components.*
- 5. Right to be Heard** – YOU THE CUSTOMER should have the right to speak to someone of authority anytime you can't get satisfaction through normal channels. If our sales representatives aren't able to help you, our supervisors have a mandate to take customer-satisfaction issues all the way to the owner of the company if necessary.

Editor's Note: The Bill of Rights for Reloaders is Dillon Precision Products' customer-satisfaction policy. It remains very much unchanged from the day the company was founded. The disclaimer about textile products and electrical or electronic components reflects the reality of how those products are produced in today's world. Ultimately, our founder recognized that satisfied customers are our best advertising, and the only thing that differentiated his company from all the others at the time was the warranty and customer service he offered.

We constantly strive to live up to his standards.
Please let us know if we're not succeeding.

All the electrical and/or electronic components of Dillon equipment and all Dillon textiles are covered by a one-year warranty from date of purchase. Any modifications performed to Dillon machines, or the addition of any unapproved equipment, including automated or mechanical add-ons from other manufacturers, is expressly not recommended and will void the Dillon warranty.

CP2000[^]

Dillon's DEDICATED Case-Processing Machine!

- Made in the USA
- Eccentric Roller Bearing Drive System
- Smoother Operation, Less Effort
- Higher Throughput, Lower Cost Per Case
- Heavier Frame for Greater Rigidity
- Seven Threaded Stations for More Flexibility
- Upgraded Primer Pocket Swager
- Primer Pocket Swage Available in Two Stations
- User-Replaceable Swage Rod Tip
- Reinforced Toolhead Bolt & Washer
- Improved Shellplate Indexing System
- Processing Speed up to 2000 Cases Per Hour

Designed to complement our RL1100 and Super 1050, the CP2000 offers higher speed, greater versatility and added case processing capability...all at a much lower cost than dedicating a RELOADING machine to prep brass! If you're loading mass quantities of ammo, the CP2000 will make your task MUCH easier.

Dillon's
RT 1500
shown
installed
on an
XL 650.

The RT1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT1500 is equipped with a

quick-disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT1500 Case Trimmer **62164** is **\$435.00**. (Available only in 110 volt 60 hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, **13141**, are **\$25.00** each. Upper lock rings, **13559**, are **\$9.00** each.

MILITARY BRASS?

**Eliminate the "Grunt Work" with
Dillon's Super Swage 600**

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound

cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

Case Preparation Equipment

CV2001 – The Industry Standard

Dillon's CV2001 Vibratory Case Cleaner is one of the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour. Not only is our capacity greater than most, but our motor is also larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine! The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media. We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners. The solution was an injection molded reversible part. Simple, and it works great. Our device is large, 10" x 14",

Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench. It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon created the CV750 heavy duty Vibratory Case Cleaner for those with limited space. This case cleaner uses the same motor as the CV2001 and is every bit as tough – just more compact. To accompany the CV750, the CM500 does the same job as the larger CM2000 Case/Media Separator; and, like the CV750, handles just about half the capacity of the larger unit. Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Dillon's **D.C.L.** non-aerosol case lube is easy to use. Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

COPPER OUT. ACCURACY IN.

HODGDON CFE POWDERS. ACCURACY RUNS IN THE FAMILY.

Easy-metering Hodgdon CFE powders—three ways to extend hair-splitting accuracy between cleanups. One sure-fire way to prevent copper-fouling buildup for today's most popular pistol and rifle cartridges.

COMBAT CLASSIC: S&W .357 REGISTERED MAGNUM

By Ken Hackathorn

**Revolver: Pre-War S&W .357 Registered Magnum
Blue Press Combat Classic Evaluation Drill Score: 149**

Putting this fine revolver through its paces was a joy. I have owned this particular S&W .357 Magnum for decades. The Smith & Wesson pre-war .357 Registered Magnum revolvers are quite desirable and considered

collector's items. I have only fired this fine old S&W once before as taking any chance of damaging a revolver that is easily worth somewhere north of five grand is always of concern. For this **Blue Press** evaluation drill, 30 rounds of .357 Magnum reloads were assembled with a performance slightly below full-house .357 Magnum ammunition.

Thanks to the craftsmanship of the mid 1930s, every detail of this gun is superb. At a retail price of \$60.00, it was the most expensive handgun made in America at the time. Sales were far beyond what Smith & Wesson expected in the mid-depression years. Even so, sales numbers were limited to only about 5500 guns until production was stopped due to the onset of WWII.

My gun sports a 5" barrel, which was one of the more popular lengths, has a "Call Gold Bead" front sight and is fitted with "Magna" stocks that provided a more pronounced shoulder that mates up with the rear corner of the grip frame. These "Magna" stocks became standard on S&W revolvers after WWII.

A 5" barrel on an "N frame" S&W revolver seems to provide the ideal balance, while not nearly as intimidating as the 3.5" barrel on a .357 Magnum, the 5" barrel makes excellent use of the .357 ballistics. What few people are aware of is just how nicely these pre-war "long action" trigger pulls perform. On the later post-war Smith & Wessons, the actions were shortened up to give the target shooters an easier effort thumb cocking their revolver in the rapid-fire strings of the National Match Course. On the original long actions, the process of starting the heavy cylinder of the heavier "N frame" was much easier. Getting this longer but much softer "flywheel" effect into action has to be experienced to fully appreciate.

The .357 Registered Magnums of Smith & Wesson were popular with lawmen and movie stars alike. Gary Cooper and Clark Gable were fans as well as FBI gunfighters like "Jelly" Brice, Walter Walsh, Hank Sloan, and a host of other professional gunmen.

Shooting Impressions:

All firing was done in double-action mode. The "Call Gold Bead" front sight consists of a simple flat gold (most likely brass) disk fitted flush with the face of a post front sight. Call Gold Bead front sights work great as long as there is light coming from behind... otherwise they are less than ideal. The McGivern domed gold bead front sight is far more desirable as it gathers light from nearly all directions. For a practical self-defense type handgun, I'll take the McGivern bead every time. Once shooting commenced, it was pure joy. Even with "slightly less than full house" .357 Magnum loads, this big "N frame" Smith

was a handful. Some of the time limits on the **Blue Press** Evaluation Drill are just a bit sporty. Even so, this fine revolver proved its merit in the way it pounded 158-grain .357 Magnum bullets into the down zero zone of my IDPA silhouette. I managed to throw one shot out at one o'clock on the weak hand part of Stage 5. With a final score of 149, I felt pretty darn good especially considering the .357 ammo. The era of the large frame .357 Magnum revolver has somewhat passed. Today everyone wants a pocket rocket for ease of carry. When the S&W .357 Magnum was introduced, men were men and packing a large frame magnum wasn't considered a big deal. Today it seems that not all men wish to be men, and S&W "J frame" .357 caliber revolvers have a following. Once you send a few magnum rounds down range in one of these

pocket rockets, most users find the .38 Special round just right.

The S&W .357 Registered Magnum was the gun first offered in 1935 chambered in a cartridge that would effectively penetrate car bodies and bullet proof vests of the day. In many ways the introduction of the .357 Magnum started a "Magnum" trend in handguns that continues to this day. What was most interesting is the "Registered" part of the name. Once purchased, owners could submit a registration card to Smith & Wesson with details of name and address so Smith & Wesson could complete a certificate of registration to the owner detailing the features of their particular revolver and the gun was warranted for life unless subject to misuse or abuse. As one might imagine, that was big deal back in the

day. My "Reg Mag" letters to Minnesota Milling Co. in 1938. My guess, considering the wear which indicates holster use, and it has been shot enough to show a wear pattern on the recoil shield. My call is that it was a payroll guard gun. In America during that era employees were paid weekly... in cash. With a large workforce, large sums of cash were picked up at the bank and brought to the business where employees typically got paid on the last day of the work week.

Considering the number of payroll robberies of that time, a S&W .357 Magnum in the payroll guard's holster was a solid investment... especially if he knew how to use it.

My grade for this "Combat Classic" is an A-plus.

COMBAT CLASSIC EVALUATION

Type: Timed

Rounds: 30 total, 150 points possible

Target: IDPA Silhouette

Range: 3, 5, 7, 10 & 15 yards

Start Position: Low Ready

Procedure:

Stage 1. 3 yards. On signal fire 2 rounds in 1.5 seconds strong hand point shoulder position.

Stage 2. 5 yards. On signal fire 2 rounds to the body and 1 round to the head in 3.0 seconds.

Stage 3. 7 yards. On signal fire 2 rounds in 2.0 seconds. REPEAT for a total of 4 rounds.

Stage 4. 10 yards. On signal fire 2 rounds, reload and fire 2 more rounds. (Start with only 2 rounds in the gun.) Time is 8.0 seconds for auto pistol, 10.0 seconds for revolver.

Stage 5. 10 yards. On signal fire 2 rounds with both hands, 2 rounds strong hand only and then 2 rounds weak hand only. Time is 9.0 seconds.

Stage 6. 10 yards. On signal fire 1 round in 2.5 seconds. Repeat for a total of 5 rounds.

Stage 7. 15 yards. On signal fire 6 rounds in 8.0 seconds.

Directionally Challenged: Dillon SL900 Initial Impressions

By Andrea Bogard – ladyshooterjournal.com, andreabogard.com

I don't follow vague directions well. If you want me

to do something, communicate clearly and in steps. Ambiguous colloquialisms, personalized hand signals and random angry outbursts get you nowhere with me. The same goes for written directions when I'm trying to accomplish something. Don't bombard me with vague instructions that involve parts you didn't send for something that doesn't look anything like the picture on the box.... Don't even get me started on the whole wrong language thing. I will package the whole thing up, send it back to Amazon and open a bottle of wine. I don't need whatever it was that badly to endure the frustration.

A few weeks ago, I got my new Dillon SL900 reloader to review. The first box arrived. My Fed-Ex guy gave me the side eye as I struggled to drag it into the house, as it was nearly my size. A week later, the optional Casefeeder arrived and, while a delightfully

manageable package, added another layer to my directionally challenged dread.

Sill in the post-divorce glow, I am in the process of

building a reloading bench in my office. Reloading bench still not done (waiting on parts and pieces), I decided yesterday was the day. I was going to bolt that baby up to whatever I had and get started. They say the way to eat an elephant is one bite at a time.

I re-opened the box. I had opened it upon receipt and promptly shut it because I had nowhere to put it. I opened it and was greeted by beautiful blue parts, sleek metal, hardware kits and – OMG – directions.

My 8-year-old son was happily playing stick guns in the yard. My chocolate lab, Moose, was snoring next to my desk and I had a few-hour window to just git 'r done. With a prayer for patience and temporary brilliance, I threw my hair in a messy bun, hit my

knees in my sundress next to the open box and dove in.

I started at the beginning. The picture. What is this thing supposed to look like when it's done? I'm super

visual, so the picture helps me a ton. Believe it or not, I suck at puzzles. Mainly by choice. I have no interest.... Moving on.

I looked at angles, orientation, lines, and connection points. I've reloaded for years for shotgun, pistol, and rifle cartridges so I have a rudimentary grasp of the flow of what needs to happen to accomplish a desired result but have never set up a reloading system all on my own.

The first thing I noticed from the picture was how neatly nestled all the parts and pieces appeared to be. "Nestled" is really the only word that comes to mind aside from "snuggled." Snuggled doesn't really sound very bad ass, though, and we are dealing with a pretty sweet piece of equipment. Sticking with "nestled."

All components appeared to perfectly fit in latitude and longitude with one another. There was no wasted space. All components fit beside, above or below one another like the notes in a symphony. Separately, the notes sound out of place, but, when employed in concert create a magnificent and fluid work of art. That's what the SL900 reminds me of. At least in the picture. I haven't put mine together yet, so we'll see.

I've got a grasp of what I'm supposed to come away with. Now, how do I get there? Is this a multi-lingual IKEA nightmare or a clean assembly?

I open the cover. A parts list by number, exploded diagrams of each segment of the loader, how to assemble and how to adjust all burst forth in black and white beauty from the pages.

Sitting cross legged on the

floor of my office, Mr. Moose snoring softly, I walk through the exploded diagrams trying to absorb each configuration, so I understand the function. This is all in faint hope that I can put it together without calling in reinforcements.

Got a grasp, now let's put it together. I grew up on classical music, opera, and musical theater.

"The Sound of Music" is (and always will be) one of my absolute favorites.

"My Fair Lady" runs a close second. As Julie Andrews tells us, you must begin at the beginning. Do, Re, Mi....

Bolts. Hex nuts. Washers. Slowly, carefully, painstakingly I followed each piece. The directions were FLAWLESS.

And I mean PERFECT. The cross reference by part number was impeccable. The pictures and exploded diagrams were spot on and organized beautifully.

Each individual step had pictures (Figures) and referenced part numbers. For someone who struggles with directions, this was priceless. There were figures/pictures outlining each step with part numbers in parentheses. Set up is complete. The next step is adapting settings to begin loading. Based on the ease of set up, I'm anticipating a fun and simple loading process.

While many companies possess great engineering capabilities, very few can communicate usage and execution as well as Dillon Precision has thus far. Give me a Dillon press over an IKEA bookshelf any day.... Stay tuned!

Dillon Automation's DA3000

For Dillon Precision's CP2000 and RL1100

Introducing the new Dillon Autodrive 3000!

- Fully automates the Dillon Precision CP2000 and RL1100.
- Case Preparation rate up to 3000 rounds per hour!
- Reloading rate up to 2000 rounds per hour!
- DA3000 easily installs on your Reloading and Case Prep machines.
- Simply press the "Start" button – no more manual cycling of the machine.
- Adjustable Cycle Rate and Dwell.
- Dillon custom-built Industrial Controller.
- Integrated safety controls and shield.
- Field-tested and proven patented design.
- One-year warranty on the DA3000.
- Maintains your Dillon-Factory machine warranty.
- Made in Scottsdale, Arizona USA.

PRIMER FLIP TRAY

A heavy, high-quality tray large enough for the Federal primer package. 13606, \$33.00 ea.

Dillon's Range Bag[^]

33389 \$139.99

Borrowing design features from Dillon's original range bag, but with upgraded metal D-rings and clips for the shoulder strap, Dillon's "Retro" Gray Range Bag is constructed of heavy-duty ballistic nylon.

The primary compartment measures 14-1/4" x 7" x 8" and features two interior pockets measuring 6-1/2" x 6-3/4" with hook-and-eye closure flaps. An additional interior pocket measures 5" x 7-1/2".

The top cover can be quickly secured via hook-and-loop strips at the end or by two side zippers.

There are two zip-up outer compartments measuring 12" x 8" x 1-1/2". One of the outer compartments features extra padding for carrying a handgun, and the other has an external zippered compartment for pens, pencils, etc.

"Border Shift" Ammo Bag[^]

Dillon's two-compartment ammo bag is constructed with a flexible inner liner that will allow the entire volume to be accessible from either zippered opening. You'll never again mix fired brass with loaded rounds!

Border Shift Ammo Bag, Black	13755	\$35.99
I.D. Card Holder [^]	14575	2.99

Dillon Pistol Case[^]

Our pistol case was designed to hold and protect your pistol *and* carry 200 rounds of ammunition! The back side of the durable, ballistic nylon case features two pockets that will accept Dillon's 100-round ammo boxes. The case features a heavy-duty, locking YKK zipper, closed-cell foam padding and a suede-textured fabric liner to protect your pistol's finish. Measures 14" x 9".

Lighten UP!

Low-Light Self-Defense Tactics

Oleg Volk Photo

By Maureen P. Sangiorgio
NRA-Certified Firearm Instructor/Range Safety Officer

Check out these startling statistics... according to the home security system company ADT, a home burglary happens once every 26 seconds. Over one million homes were broken into in 2019. Burglaries account for \$3 billion in property losses. And just over half of break-ins involve forcible entry.

The most common times for break-ins occur between 10:00 am and 3:00 pm. Rather than being guarded by night, most burglars choose the daytime to attempt a break-in, targeting homes when they believe no one will be present.

But what should you do if you're home at night, fast asleep, and you hear someone trying to break into your house? Follow these tips from one of the country's most renowned self-defense experts, so you can keep yourself and your family safe in the event of a night-time home invasion.

Have a plan. If you and your loved ones get woken up in the middle of the night, chances are you're all going to be half asleep. In a panic situation, even if you're wide awake, it's difficult to think clearly. So, it's best to

have a plan in place, and practice that plan regularly, so you can rehearse what to do if someone is trying to break into your home. The more you rehearse, the deeper it will get set in to muscle memory, which will kick in during a stressful situation.

It's also key to practice self-defense shooting in low-light situations as often as possible. You've got to train your body, mind, and firearm skills to the point where you're under control and you're able to make very difficult, stressful shots. Research has shown that when someone is shooting in a dark, stressful, panic-riddled situation, their shot pattern will

probably be twice as large as their best day at the range.

Look for lots of lumens. When faced with a low-light self-defense situation, the lights on your firearm,

"Low light shooting only means that it's low light before you turn your light on. At no point in time should you press the trigger until you can one hundred percent, absolutely guarantee you know what you're pressing your trigger on."

and in your hand, are incredibly important. “Look for products that are at least one hundred lumens or more,” says Fred Mastison, president of Force Options Tactical Training Solutions, and internationally recognized as one of the top combatives and firearms instructors in the world. “Whether it’s a light on your firearm, or in your hand, you want the light to be high quality, easily accessible, and reliable. And don’t limit yourself to only budget-friendly lights.

My question is, if you’re only willing to spend twenty-five dollars on a weapon light, isn’t your life, and the lives of your loved ones, worth more than that?”

The firearm light market has exploded recently. Now with advances in LED technology, there’s a lot of companies that make very bright lights that don’t cost a fortune. Which is a good thing, because according to Mastison, when choosing a flashlight, or a firearm light, the brighter the better. “First of all, it allows me to truly see everything because you not only want to see the bad guy in the doorway, you want to be able to see beyond,” says Mastison. “Is there anyone with him? Behind him? Is there more than one burglar trying to break into my home? Second, a very bright light is a weapon in and of itself. People instinctively and physically recoil from a super bright light being shone in their eyes. It allows us to burn off their night vision. At night, when exposed to bright lights, their night vision is diminished, which is a benefit to us trying to defend ourselves.”

Know your rights. Contact your local police, or state police, to find out if your state has the Castle Doctrine law. About 45 states have this law, which states that individuals have the right to use reasonable force, including deadly force, to protect themselves against an intruder in their home.

Hunker down. According to Mastison, if a burglar has broken into your house at night, you have two options – either hunker in place, or hunt for the burglar. Unless you have an extremely high amount of professional, tactical training, he suggests you stay put. “If you hear strange noises at night, or any time of the day, and you think someone is trying to break into your home, call 9-1-1 immediately. Then secure your loved ones, family,

children, pets, in a safe room, and instruct them to stay there and lock the door from the inside, no matter what happens.”

Remain calm. Your next step should be to try to calm yourself. “Take deep breaths, clear your mind, so you can think clearly and make rational decisions,” advises Mastison. “Fear is very powerful. You can be the most experienced ninja warrior, but there’s going to be a momentary shock when you realize things could go bad in a hurry. What you need to do then is control yourself. Take slow, deep breaths, stay calm, and practice aiming the gun at a point at the door.”

“In a worst-case scenario, if that door opens, and you are forced to defend yourself and your loved ones against a potentially deadly threat, you have a point of reference. Point at what you can estimate the center mass point of the burglar would be. Prepare your mind because your mind will be the weakest point. The stress on your mind in a low-light, self-defense

situation is incredible.”

According to Mastison, you want to illuminate an entire area downrange so you can visually verify what you’re pointing your gun at. “It’s critical you be able to see what’s going on,” says Mastison. “Low light shooting only means that it’s low light before you turn your light on. At no point in time should you press the trigger until you can one hundred percent, absolutely guarantee you know what you’re pressing your trigger on.”

When Away From Home

If you are away from home, and returning to your car at night, it’s a good idea to keep a small, extra-bright LED flashlight in your pocket or handbag so you can shine the light around, under, and inside your car before opening the door. To save time, when exiting a building, place the flashlight in your hand.

“If you see someone lurking near your car at night, be sure to shine the flashlight directly at their eyes,” says Mastison. “It causes discomfort in the eyes. By using the flashlight in that manner, it’s a distraction tool. It’s very disorienting. If you shine a super bright 500 lumens light right in their face, then move quickly away from them, they have no idea where you are going. It’s a wall of light, a light shield that you can hide behind. When you quickly move away from the threat, you have distance, which is our friend. After you shine the light in their eyes, beat it on foot and get to a safe space. Go back inside where you were, and call for assistance.”

Another safety tip: A mistake victims have made is to unlock their car from a distance with their keyless remote. “You don’t want to unlock your car until you can see all the way around it,” says Mastison. “Unlocking it from a distance allows somebody who’s near your car to slip in without you even knowing it.” Look underneath the car, and inside the car. When inside, take your rearview mirror and dip it down so you can look into the back seat. If someone is hiding there, you can see them. It’s also a good idea to turn the mirror down before exiting your car, so when you return to your car, you can check the rearview mirror from the outside before getting inside.

RL550C[^]

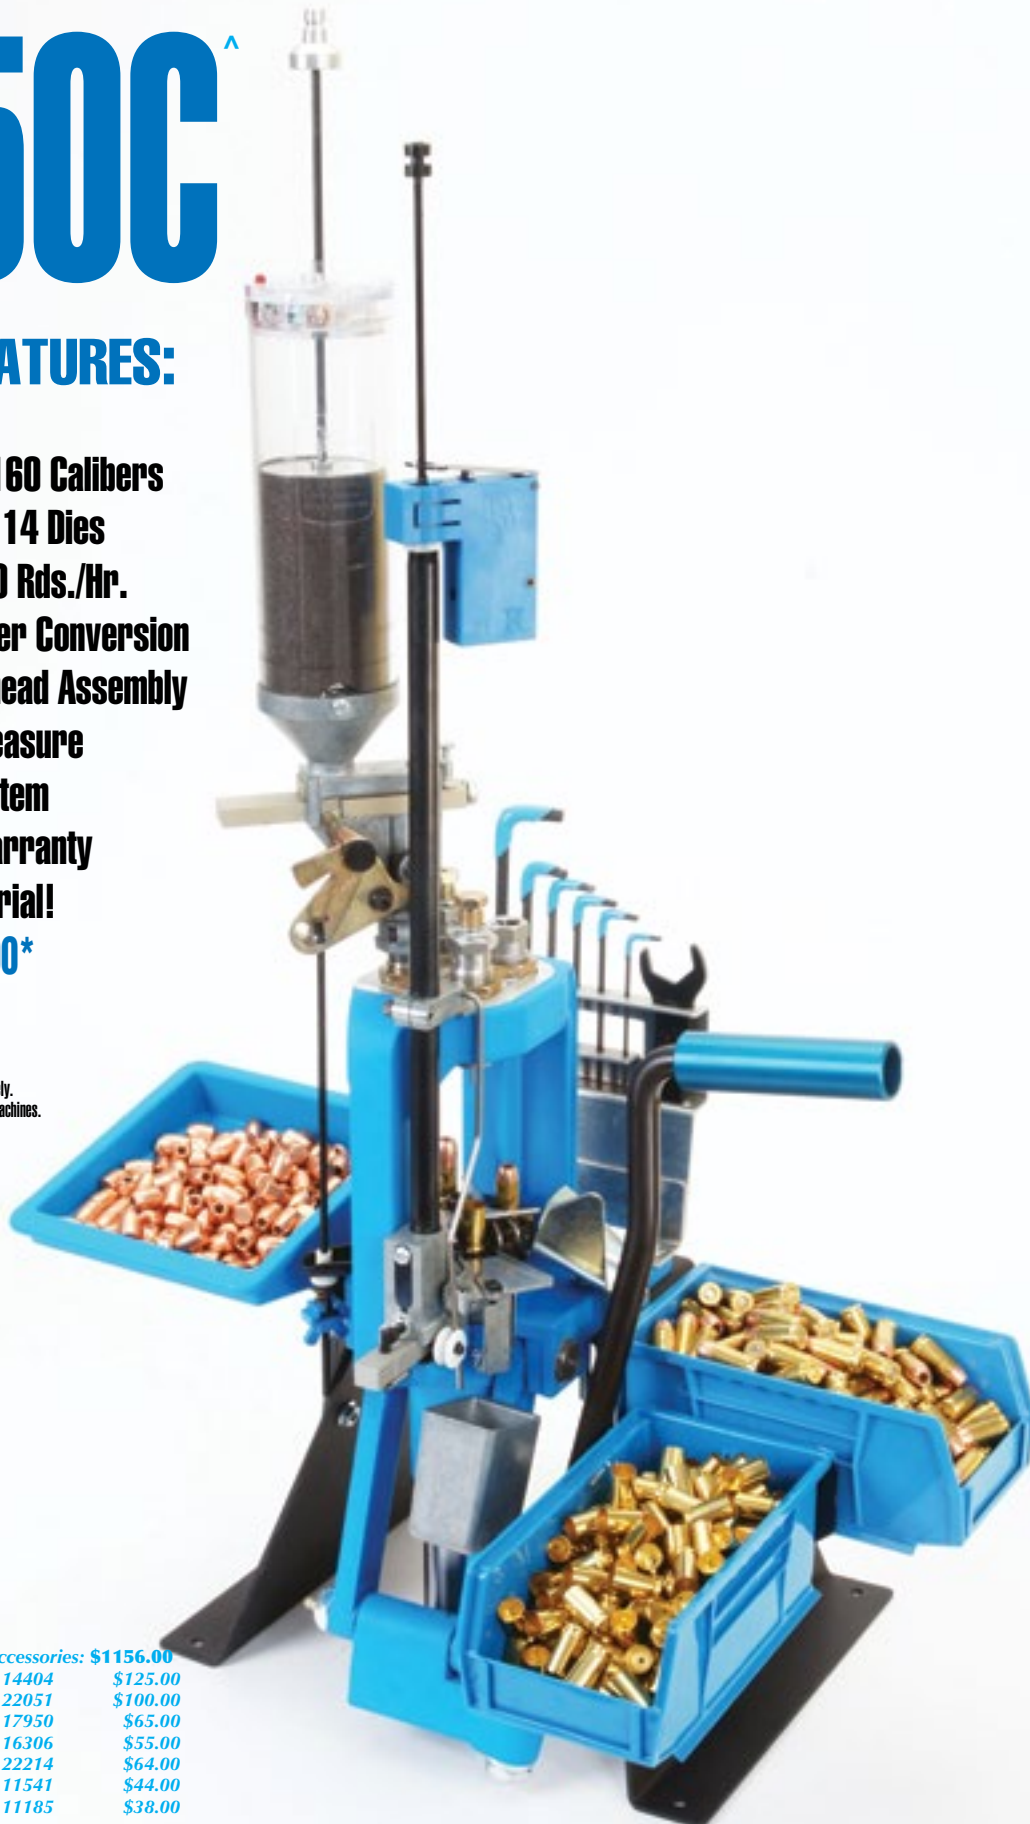

STANDARD FEATURES:

- Made in the USA
- Accommodates Over 160 Calibers
- Uses Standard 7/8" x 14 Dies
- Loading Rate: 400-600 Rds./Hr.
- Comes With One Caliber Conversion
- Interchangeable Toolhead Assembly
- Automatic Powder Measure
- Automatic Primer System
- Lifetime "No-B.S." Warranty
- **RISK FREE 30-Day Trial!**

\$665^{00*}

Dillon Die Sets

Sizing/Depriming Die (Pistol)

Our sizing/depriming dies feature a “floating decap assembly” with a snap spring that throws the spent primer off the pin and eliminates the primer “draw back” that often occurs when decapping military brass. The primary feature of Dillon’s size die design is the long, tapered carbide ring with a radiused opening. That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that’s still only a part of the story.

Bullet Seating Die (Pistol)

Our quick-disassembly seat die allows the user to disassemble and clean the seating die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We’ve incorporated a “flip-flop” seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem. Dillon’s double-ended design makes it simple to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time.

Crimp Die (Pistol)

We’ve made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you’ll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

Spare Decapping Pins

Package of 10	21528	\$9.00
---------------	-------	--------

Sizing/Depriming Die (Rifle)

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for “squeak-free,” effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die (Rifle)

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die (Rifle)

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today’s marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

BL550[^]

Dillon's Basic Loader

\$415⁰⁰
15399

Reloading Dies and Caliber Conversions sold separately
Pictured with optional accessories:
Strong Mount 22051 \$98.00

Dillon's RL550 has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles. The BL550 is essentially an RL550 without the automatic priming and powder systems.

Capable of loading over 160 calibers – just like the RL550 – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL550 loader! The interchangeable toolhead (Page 26) makes it quick, easy and inexpensive to change calibers.

AUTO PRIME SYSTEM[^] 16627 \$125.00

PRIMER SYSTEM EARLY WARNING[^]

Allows you to focus on loading instead of worrying about failing to seat a primer, and is an easy slip-on attachment to the auto prime system. 20302 \$40.00

AUTO POWDER SYSTEM[^]

Accurate to within 0.1 grain, our Automatic Powder Measure is world renowned for its charge-to-charge consistency. 20251 \$139.00

The Biggest Variable We Don't Talk About in Reloading

By Clayton Walker

We've all seen it: in at least one of our reloading manuals, often on a page we've dog-eared or flagged with a post-it note, there's a data table with one of the entries bolded or given an asterisk. "Denotes accuracy load," the entry might read. Or perhaps we come across a shockingly small group posted by someone on a reloading forum, at which point someone will invariably ask for the recipe that produced such a wonderful outcome.

For many intermediate shooters, it seems like the velvet rope has been lifted when they come across information like this: with thousands of different component combinations possible in any particular caliber, why not start in the place where at least one expert has had success?

Readers of these pages will most likely identify *several* areas where such an assumption is problematic: with so many different mechanical variables going on in the testing conditions of component manufacturers or manual publishers, it's fallacious to imagine their results will translate to any particular firearm on a one-to-one basis. To name just one point of possible departure: can one

assume the velocity and accuracy data recorded by a publisher using a 10" test barrel will translate perfectly to a 4" Springfield XD?

Normally, these discrepancies result in intermediate reloaders being instructed by older, wiser peers to grab a chronograph of their own, record detailed notes of velocity and group sizes of how a load behaves out of *their* gun from a solid rest, and to work up from published starting loads. And make no mistake: all of that is unmistakably great advice!

However, I find that there's less discussion about the *non-mechanical* variables that go into load selection or evaluation, especially in those cases where a shooter is firing a gun with their own two hands in a multiplicity of real-life contexts. At this point, I'm going to say something I hope isn't controversial, but here it goes: outside of cases where a firearm is being shot from a Ransom Rest or Caldwell Lead Sled, the most accurate load is the one *you* shoot the best.

For nearly every shooter who *hasn't* dedicated multiple decades to the process of incrementally getting better

– and even for a good number of us who have – I have found this is almost always the load that produces the least amount of recoil and muzzle blast. As I’ve written in these pages before, all of us must contend (at least on some level) with our inner simian/reptile brains freaking out as we produce explosions at arm’s length. As we become more startled, either from the sudden flash and bang of a discharging firearm or from the expectation of impending physical pain, our motor control shifts from fine to gross movements as a result of the fight-or-flight mechanism.

Distilled to its base essence: if we are flinching as a result of our chosen load, it is impossible that the combination of components we selected will ever produce the most accurate results.

Here, physics comes to the rescue in helping us select a load, either for ourselves or for a shooter who might be even more affected by recoil. We might remember from high school that kinetic energy increases exponentially with velocity and linearly with the weight of the projectile. Put simply: shooters can expect more recoil from loads using bullets considered heavy for caliber, but *especially* as they chase max velocity numbers for any particular cartridge.

Let me give a concrete example from my own life. I have described myself as being slight of build and bony in the upper body. When I reload for my Remington Model 30 in .30-06, I am literally spoiled for choice when it comes to components. However, I have found it difficult to shoot elk-slaying loads without at least some trace of a flinch or mash. Even now, I wince a little when thinking about that crescent-shaped metal butt plate slamming back into my shoulder pocket.

For punching paper, where I have zero concerns about terminal ballistics, the most accurate loads *for me* when shooting offhand have been those that utilize H4895 and end up somewhere in the ballistic territory of .30-30, propelling a 150-grain bullet at about 2100 feet per second as opposed to somewhere closer to 3000 fps. Aside from the better groups, it’s also nice not to come back from a range trip looking and feeling like I shoulder-checked a door jamb!

Of course, there is a point of diminishing returns when it comes to trying to boost one’s practical accuracy through the use of low-velocity, moderate-pressure rounds. Consider one of the most ubiquitous “accuracy loads” of all time: the 148-grain .38 Special wadcutter, which is almost always propelled by a small amount of very fast burning powder. With velocity in the neighborhood of 700 feet per second, there’s not much recoil to speak of!

As the saying goes, however, there’s no such thing as a free lunch: slow-moving bullets spend more time in the barrel of the firearm. If any unintentional movement is imparted to the firearm through a sloppy trigger pull, the

shooter heightens his or her chance to pull a round off target. Faultless follow-through and a laser-like focus on one’s technique become veritable prerequisites to shooting .38 “Bullseye” loads to their potential.

Anecdotally, I find I have better luck when I load my .357 wheelguns with moderate-velocity magnum loads that propel a 158-grain SWC somewhere around 1,250 fps. These loads are perfectly pleasant and can be shot all day long without any lingering fatigue or discomfort. The bullets also get out of the barrel before I, the shooter, have too much of a chance to mess things up!

On a technical level, reloaders and shooters of handgun cartridges will also note that while a lot of moderate-to-lower velocity loads do have the effect of generating less recoil, they can introduce another gremlin: ignition uniformity. Especially with revolver cartridges originally designed for black powder, including the .38 Special, .44 Special, and .45 Colt, there can be a significant velocity difference among loads shot “powder forward” or “powder back.”

A warning here: beyond the vertical stringing that can normally be expected from shooting rounds with significantly different velocities, one can also encounter a far more dangerous situation: the squib. Indeed, a starting, target-grade load shot “powder forward” could diminish pressure and velocity to such an extent that the bullet never leaves the barrel. And yes, I have encountered this when loading and shooting published loads from reputable manuals!

All this represents another reminder to use all your senses not just when evaluating loads at the upper end of the performance spectrum, but also those at the lower end as well. Be sure to stop if anything sounds or feels unnaturally light, and be sure to plan out a safe way to check for an obstruction.

In closing: for the great number of shooters who heft our guns with our own arms and hands and use our human index fingers to pull the trigger, the most accurate load is the one that burns most uniformly and gets out of the barrel most expeditiously, but not so fast that it produces an unacceptable level of recoil energy or a bang loud enough to induce a flinch.

Finding this precise balance is easier theorized than it is accomplished! It additionally requires us to treat ourselves as indispensable to the outcome of shooting, not merely a variable to be minimized. Velocity numbers and rested group size data can only tell us so much about the results we might obtain offhand. I would counter that it’s equally important to record your experiences and perceptions with a given load, sloppy and subjective as they might be. When performed in the manner I’ve described, I predict your own experimentation will ultimately lead you to a pet load that validates a very old axiom: almost always, less is indeed more.

Dillon Reloading Accessories

A Strong Mount increases your machine's "footprint" to over 10", spreading the load over the whole bench instead of stressing the leading edge. For XL750/650 owners with limited overhead clearance, the XL750/650-only mount raises the machine 6" above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL550/XL750/650	22051	\$100.00
XL750/650-only	22052	98.00
"SDB"	22223	110.00

These plates bolt directly to your bench top, and are drilled and tapped to allow mounting your reloading machine directly to the top of the mounting plate.

Stock #62005, \$100.00 is for:

XL750, XL650, RL550 and Square

Deal "B". **Stock #62006, \$100.00** is for:

RL1100, CP2000, Super 1050 and RL1050 as well as *any* Dillon reloading machine that is mounted on the Dillon Strong Mount.

Our **Bullet Tray** is a simple, shallow aluminum tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL550 and XL750/650 when equipped with the RL550/750/650 Strong Mount, and a separate kit is available for the RL/Super 1050.

Bullet Tray Kit	22214	\$64.00
1050 Tray Kit	22215	64.00

The **Low Powder Sensor** provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

16306 \$55.00

Our **Toolholders** are available for your reloading machine and ensure that the tools you need to service your reloader are handy and organized. No more digging around your bench trying to find the right size hex wrench!

XL650 with Wrench Set	11555	\$46.00
RL550/XL750 with Wrench Set	11541	44.00
SDB with Wrench Set	19441	43.00

Note: Super 1050 Toolholders include Wrench Set

1050 with bracket	62202	52.00
1050 w/o bracket	62203	47.00
One-Inch Bench Wrench	10842	15.00
SDB-Only Wrench	19970	16.00

Color Coded Aluminum Toolheads for the RL550 and XL750/650 make it easy to tell at a glance which caliber you're set up to load.

Gold RL550	62134	\$48.00
Blue RL550	62132	48.00
Black RL550	62133	48.00
Gold XL750/650	62138	53.00
Blue XL750/650	62136	53.00
Black XL750/650	62137	53.00

The **Square Deal "B" Toolhead Stand** holds your SDB toolhead, powder measure, dies and caliber conversion components (*not included*) in an orderly manner.

62225, \$47.00

Our **Toolhead Stands** for the RL550 and XL750/650 are the ultimate in convenience for keeping your reloading bench clean and uncluttered.

22055, \$30.00 each

Dillon's **1050 Toolhead Stand** is now available to store caliber quick changes for the 1050.

62200, \$60.00

Equipment **Dust Covers** are made of tough packcloth nylon and add security to your loading bench. Your reloader will be protected against more than dust as the machine covers come with a D-ring that allows the heavy duty zipper to be locked.

SDB/550 Cover	13795	\$24.99
XL750/650 Cover	10443	39.99
1050 Cover	13239	39.99
Master lock	13083	6.99
Pictured: SDB/550/650/750 Quick-Change Cover (for use with powder measure)	11143	\$14.99

Our **Primer Flip Tray** is a heavy, high-quality tray large enough for the Federal primer package.

13606, \$33.00 each

Primer Pick-Up Tubes are used to transfer primers from flip tray to priming system. Having extras pre-loaded with primers makes it easy to load a pre-determined amount of ammo without having to stop to pick up primers.

1 Large	22029	\$11.00
1 Small	22028	11.00
2 Small, 2 Large	20056	40.00
4 Large	20050	40.00
4 Small	20049	40.00

"D-TERMINATOR" Electronic Scale

- 1500 grain/100 gram capacity
- Accurate to 0.1 grain/0.01 gram
- Uses four AA batteries (included)
- Comes with its own AC adapter
- 100g scale check weight included

NOTE: Dillon electronic scales are covered by a one-year warranty from date of purchase.

\$149.99
10483

Dillon's **"Belted Magnum" Powder System** features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

97126 \$220.00

The **Powdercheck System** (available for XL750/650 and Super 1050 reloading machines) sounds an alarm if the powder charge in a round is out of limits either high or low.

21044, \$99.00 each

An **Aluminum Roller Handle** gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

17950 \$65.00

Dillon's **1" Bench Wrench** fits our 1" Die Lock Rings which give you more space on the toolhead.

10842, \$15.00 each

Our **Machine Maintenance Kits** come with everything you need to keep your Dillon loader cleaned and lubricated up to factory specifications. Available alone or in combination with a spare parts kit for your machine.

Maintenance Kit Only	22211	\$40.00
w/SDB Spare Parts Kit	97015	65.00
w/550 Spare Parts Kit	97016	65.00
w/750 Spare Parts Kit	97500	79.00
w/1050 Spare Parts Kit	97018	84.00

RF100 Automatic Primer Filler

The **RF100 Automatic Primer Filler** eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run! In about two minutes the primers are inside the protective metal housing.

Large Primer Filler	97077	\$480.00

Lyman Neck Expander Die

Improves accuracy of cast and jacketed bullet reloads. Extends case life. A "Must-Have" die for the cast bullet or flat-base bullet user. The first step expands the inside of the case neck to just under bullet diameter for precise case neck tension in the finished reload. The second step expands the case mouth to bullet diameter or slightly over. This allows the jacketed or cast bullet to be started perfectly centered in the case mouth and properly aligned with the axis of the case neck. By adjusting the

plug slightly deeper, the second step also provides a slight flaring of the case mouth for reloaders using cast bullets.

Dillon AkroBins[^]

AkroBins are ideal for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL550/XL 650/750 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

WARNING: These products contain lead, which is known to cause birth defects, other reproductive harm and cancer. Handling components, ammunition, cleaning firearms or discharging firearms in poorly ventilated areas may result in lead exposure. Have adequate ventilation at all times and wash your hands thoroughly after exposure.

Shellsorter

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

LabRadar Chronograph

LabRadar is the world's newest technology in obtaining projectile velocities of Rifles, Shotguns (slugs only), Handguns, Pellet Guns, BB Guns, Bow & Arrows, Crossbows, and Paintballs. Doppler Radar is the most precise method of measuring velocities available. Its accuracy is not dependent on light conditions or being exactly parallel to photoelectric sensors resulting in false readings.

- Track and obtain velocities up to 100 yards
- Easy Set-Up
- Get series statistics: Maximum Velocity, Minimum Velocity, Average Velocity, Standard Deviation, Extreme Spread
- Accurate with subsonic, transonic, supersonic projectiles
- Works under any light conditions
- SD card support for virtually unlimited shots and series recording
- Get velocity at multiple distances

11861 \$625.00

LabRadar Protective Case – This custom, padded case is constructed of 600 Denier fabric with a waterproof backing. It's great for storage at home or while going to the range. It includes a full-length zipper with pull tabs, padded sides and a rubber covered web handle. There is a large exterior pocket for storage of extra batteries or accessories that has a Velcro closure. A shoulder strap is included.

11862 \$39.99

LabRadar Battery Pack – A rechargeable USB battery bank is the perfect solution to power LabRadar. While the system works great on AA batteries, you can extend the shooting day with this rechargeable power bank. It is supplied with heavy duty 3M Dual Lock reusable fastening tape to attach the power pack to your LabRadar. A USB cable is supplied to connect to your LabRadar. The power pack is also compatible with cell phones and tablets. The battery also has a Type C connection for charging other devices

11866 \$24.99

Taylor Freelance

Blackened Brass Backstraps

Weight and felt recoil are directly related, so by adding weight, our brass backstrap calms the gun down, creating a smoother-shooting, softer-kicking, more-neutrally-balanced handgun. Adding weight to the frame also reduces the tendency toward "weak wrist" malfunctions common to all polymer frame handguns.

Canik Mete Backstrap	30345	\$59.99
Canik SF/SFX Backstrap	30344	\$9.99
Walther Full-Size Backstrap	30347	\$9.99
Walther PDQ/PDP Compact Backstrap	30346	\$7.99

Taylor Freelance's +6 Mag Extension for the PPQ extends your mags out to the maximum allowed in 3-Gun and USPSA Limited – giving you 21+1 instead of the stock 15. If you shoot a .40, our extension gives you +4+ to +5, for 16 or 17+1. Custom Wolff springs add feed power for reliability. NOTE: Not for use on 18-round magazines. May result in damage to ejector. NOTE: The stock magwell that ships on the PPQ SF Pro will not accept these basepads.

30340 \$39.99

Taylor Freelance's new +3 Mag Extension for the PDP extends your mags out to the maximum allowed in 3-Gun and USPSA Limited competition – giving you 21+1 instead of the stock 18. Fits the full-size 18-round mag (not the compact). IMPORTANT: The Walther PDP and the Walther PDP COMPACT use DIFFERENT magazines. The PDP compact uses Walther PPQ magazines.

30341 \$39.99

Push your Canik's firepower to the maximum with TF 140mm Mag Extensions. Fits the full-size SF/SFX, and the compact SF Elite/Elite Combat! On the SF, get 22+1 capacity that's legal for USPSA/3-Gun competition (meets 140mm limit). Works with stock magazine spring (saving money). **BERETTA 92 USERS!** This basepad fits the Mec-Gar 18-round Beretta 92 magazine.

30342 \$29.99

Mr. Bulletfeeder®

by Double-Alpha

Mr. Bulletfeeder has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy – a world leader in practical-shooting-related product manufacturing and distribution – at the helm. The design allows the bullet collator to be mounted onto the casefeeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

-------------	-------	--------

This holster is designed for an extreme high rise carry and offers the best of both worlds. Not only does it allow you to carry a full-size automatic handgun, it's also totally concealable. The unique design has Mernickle's patented stabilizer flap that goes behind the belt. This prevents the grip of the gun from tipping away from the body while doing daily activities. The high-rise position allows you to sit in chair or vehicle without needing to take the gun out of the holster.

XHR 1911 Holster **19018 \$124.99**

Designed to be the ultimate in concealed carry for those not comfortable with an Outside the Waist Band (OWB) holster – the ISP offers a great carry solution! This holster gives the appearance of a front pocket wallet and breaks up the outline of your gun. The smooth Herman Oak leather inside protects the finish of the gun, but the suede outside ensures that the holster sticks in the pocket.

Sm Auto ISP	19019	\$39.99
Med Auto ISP	19020	39.99
Sm Revolver ISP	19089	39.99

Conceal-Carry Performance Series revolver holsters can be worn strong side, appendix carry or cross draw and are fully molded. Auto holsters are strong-side only.

4-3/4" SAA/Clones	11560	\$109.99
4-5/8" Ruger Blackhawk	15765	109.99

This holster/mag pouch combination was designed for the Single Action Shooting Society's "Wild Bunch" category, incorporating a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy.

1911 Holster	19947	\$175.99
Mag Pouch	19946	49.99

Facts Don't Matter

By Alan Korwin

At a speech planned for the near future, the event sponsor proposed this introduction:

"Having written 10 books describing American gun law at the federal and state levels, Mr. Korwin has found many people's thoughts about guns have as much resemblance to reality as lunar rock has to green cheese. He hopes to dispel some of the myths and replace them with a more informed approach."

It's a good start. My goal is to present a case in a way only irrational bluster and gun haters could dispute. History shows there's plenty of both. I begin with some foundational principles, that seem immutable to me:

- Stealing someone's personal property is a punishable crime.
- An unprovoked physical assault on a person or property is a punishable crime.
- It's legal for a woman or man to defend against an unprovoked violent attack, repelling force with force.

**Disarm everyone,
bad guys first.**

Philosophically and spiritually, I would say I'm a *utopian pacifist*—I would like no weapons of any kind on the surface of the Earth, in an era of enduring peace, prosperity and abundance. This is indeed utopian. It's impossible while the four horsemen of human havoc exist – angry, hungry, stupid, and wicked.

So, I support disarming everybody, bad guys first.

Until then, I find it hard to support disarming any innocent person.

If we could wave a wand and make guns disappear, the communist Chinese would make new ones. And the Italians (Beretta), Brazilians (Taurus), Russians (AK-47), Austrians (Glock), indeed all armed nations and basement tinkerers would be in business making the iron river.

It's easy to imagine a gun-free world. Just go back to pre-gun times, and what you get is Genghis Kahn, Julius Caesar, Vlad the Impaler and my favorite – Xena the Warrior Princess. It was a bloody mess, far worse than planet gun.

Most people are misled about all this, because if it's in the news, and it's about guns, it's probably 100-percent

wrong. Yes, 100-percent wrong. For example, four people were shot recently in Philly, receiving saturation media coverage. No – they were *murdered*. Media doesn't like calling it *murder*, placing emphasis on criminal activity. It defeats their constant guns-are-bad narrative. Shooting is a sport. Murder is a crime.

One million DGUs (defensive gun uses) every year (13 separate studies show between 76,000 and 2.3 million annually, NCVS, FBI, Kleck) get virtually no coverage, so the ratio for this story is about 250,000 to one against balance. Then 7,000 inner-city murders annually (with few prosecutions!) are censored. 100-percent deceptive, misleading, wrong.

It's not a political problem, it's medical – hoplophobia – which the DSM (Diagnostic and Statistical Manual) and mainstream media rejects. Media's swift easy focus on guns should be on criminals. We're led to false conclusions – this common thought:

"They should take away all the guns." That's irrational bordering on deranged. Who is "they"? And who makes them give up *their* guns? How?

People arguing from total darkness are often stunned to learn you don't need certification or training to obtain a firearm. That's exactly how books or microphones work – unfringed fundamental rights.

I encourage universal gun-safety training to get a high-school diploma. Train everyone. Other nations do. Our civilian-marksanship law already exists, use it. Public school systems adamantly object.

Gun permits, disparaged as permission slips, should only be issued to criminals. You start to see the oxymoronic paradox.

A common erroneous analogy is often drawn: We license drivers and register cars so why not license gun owners and register guns? At first blush this sounds right, but the analogy isn't parallel. It's a subtle but seductive logical error.

If car-and-driver registration is valid, we should register pilots and planes. *That's* a parallel argument, and we do. By contrast, licensing writers and registering printing presses (basic rights), is also parallel, but obviously we

**"I would like no weapons
of any kind on the
surface of the Earth,
in an era of enduring
peace, prosperity
and abundance... It's
impossible while the four
horsemen of human havoc
exist – angry, hungry,
stupid, and wicked."**

Because Anti-Gunism is a Medical Condition

don't, and should not, unlike dictatorships where spoken words are recognized as more threatening than arms. "We would not allow ourselves to be challenged with guns, why would we allow that with words, when that is far more dangerous." – **Stalin**

Self-defense is honorable, recognized since The Code of Hammurabi (1750 B.C.) and the Bible. Innocent life is precious and must be protected. Self-defense laws and rules are proper, needful and deserve support, especially recognizing inescapable human corruption in leadership and judicial systems. We like to think our nation is above banana-republic corruption, but recent events clearly demonstrate we are not.

The bottom line on this, and it's an individual choice: You can let the lion eat you and your family, or use anything at hand, or the best thing available, to protect yourself and survive – at your option. You remain free to perish at will. Removing that choice from others is pure tyranny.

Corruption in the system increases the imperative for armed self-defense, the ultimate repository of liberty. You can't arm slaves and expect them to remain slaves.

A quick word about following "news": Watch out for "we" and ask yourself, "Who exactly is that?" When you hear the constant phrase "I think..." know that news has ceased, and opinion follows.

In my advanced program, we can look at the true roots of the rights to arms: Balance of power, Colonial-era "savages," hi-powered assault weapons like the long bow, crossbow, trebuchet; and assault is behavior, not a type of hardware.

The struggle for gun rights is a small piece of the larger struggle for the rights of all humans.

Alan Korwin, a national columnist, award-winning author of 14 books and veteran of more than 1,000 radio and TV interviews, has been writing as The Uninvited Ombudsman since 2006. His next book, Why Science May Be Wrong, is underway. Reach him at GunLaws.com. 

Wild West Guns High Performance Lever Action Upgrades

The Original Big Loop that started it all, built for big guns, big guys, and gloved hands to give you the smoothest and most reliable lever-action throw available! Tested Alaskan tough and built to last, WWG Big Loop Levers are precision wire cut and CNC machined to be the perfect fit for your Marlin Rifle! Don't be fooled by imitations, WWG big loops are ergonomically designed to be cycled while you're still looking down the sight making for a faster more accurate follow-up shot because charging bears won't slow down for you to reload! Wild West Guns Big Loop Levers fit Marlin 1895 Straight Stock and Pistol Grip and are also compatible with 336 models, available in Blue and Stainless.

Machined out of spring stock, WWG Bear Proof ejectors live up to their name by being tough enough to handle the recoil of the big bore loads! The Bear Proof ejector fits all modern Marlin lever-action rifles. Bear Proof Ejector, Blue 21178 \$35.00
Bear Proof Ejector, Silver 21179 35.00

KynSHOT

Hydraulic Recoil Buffers

The KynSHOT™ hydraulic buffers reduce recoil, muzzle rise and shoulder fatigue allowing for quicker target acquisition after the trigger is pulled. In addition, the KynSHOT buffers control the bolt carrier group operation thereby reducing excessive wear and tear on the mechanical cycling components.

KynSHOT hydraulic buffers are manufactured with premium seals, materials, and components in an aerospace grade manufacturing facility that is dedicated to quality. Each and every one of our product designs have undergone extensive impact, functionality, and life testing to ensure unmatched performance. This results in a product that can withstand and perform in harsh environments, including temperatures from -30°F to 150°F. The patented design and damping technology make the KynSHOT buffers the industry leading recoil mitigation buffer.

HIPERFIRE® High Performance AR Triggers

Competition HIPERTOUCH®

- Designed for the Ultimate In AR Performance
- HIPERFIRE®'s Most Popular Trigger
- Virtually No Take-Up/Pre-Travel,
- Very Smooth
- Cam-Over Toggle Engine™
- Very Hard Hitting Hammer Soft-Start Lock-Up™ for Pre-Ignition Stability
- You-Adjust Pull Weights of 2-1/2 and 3-1/2 lbs.
- Radical Sear Mechanics™
- Straight Trigger Bow
- HIPERSHOE® Finger Pad Revolution™
- Changes the Trigger Lever Length for Fine Weight Adjustment

Reflex HIPERTOUCH®

- Everyman's AR Trigger
- Virtually No Take-Up/Pre-Travel, Very Smooth
- Similar to the Competition except with Curved Trigger Bow
- As Run by Keanu Reeves in John Wick 2
- Cam-Over Toggle Engine™
- Very Hard Hitting Hammer Soft-Start Lock-Up™ for Pre-Ignition Stability
- You-Adjust Pull Weights of 2-1/2 and 3-1/2 lbs.
- Radical Sear Mechanics™
- Semi-Auto Single-Stage
- Curved Trigger with a Backbone™
- Crisp, Clean, Trigger Break

HIPERFIRE® PDI™

- Power Drop-In Trigger
- 2-lb. Pull
- MIL-Grade Hammer Strike, No LPS, Ever
- H&M BLACKNITRIDE+™ Finish
- Exceptionally Smooth Feel
- Enhanced Corrosion Protection
- Polished Look
- PCC Blowback Tough
- Hammer Collision Bumper
- Disconnecter Crash Protection
- Disconnecter Spring Crush Protection
- Curved Trigger Bow with a Backbone™
- HIPERSHOE® Finger Pad Revolution™
- Changes the Trigger Lever Length for Fine Weight Adjustment
- Changes the Trigger Lever Length to Further Adjust Pre-Travel
- Position Your Finger in the Same Place Every Time

HIPERFIRE® X2S™ MOD-2

- Two-stage AR trigger
- Minimal, user adjustable, 2 – 3-pound first stage
- Minimal second stage wall with a 1-1/2-pound weight
- Total 3-1/2 – 4-1/2-pound pull with green or red springs respectively
- Distinct wall between first and second stages allows for effective “prepping” of the trigger for added control
- Clean, effortless break
- Weightless, imperceptible overtravel
- Cam-Over Toggle Engine allows for lighter pull weights without losing hammer strike energy
- Soft Start Lock-Up aids in eliminating rifle “flinch” after the break for more accurate shots at distance

The Specialized Dynamics AR-15 Emergency Repair Kit includes: three gas rings, extractor spring, firing pin retaining pin, buffer retaining pin/spring, hammer/trigger pin, take down dent and spring.

19460 **\$19.99**

MAGPUL PMAG Drums

MAGPUL's PMAG drum magazines are durable, lightweight, highly reliable and made in the USA. The unique drum configuration keeps the height of the magazine manageable and allows for prone firing and easier storage. Features an easy-to-use loading lever, paint pen dot matrix for easy marking, and a rear window for instant capacity indication.

Regarding GLOCK pistol version: It is recommended that you install a new OEM magazine release on Gen 1-3 GLOCK handguns to support the extra weight of the magazine. Gen 4 GLOCK handguns will require an aftermarket metal magazine release. Installation of a new recoil spring assembly to ensure reliable feeding is strongly recommended. Individual variations between firearms may result in an extra power recoil spring being required. Use of the D-50 GL9 in pistol caliber carbines (PCC) is not recommended, because the increased length of the feed tower will be partially unsupported in most pistol caliber magazine wells. This unsupported condition may cause premature wear on the feed tower magazine catch, and (in firearms which deviate from factory magazine well specifications) may result in improper round presentation and failures to feed.

All-in-One Torque Driver Kit

Featuring the Fix It Sticks All-in-One Torque Driver. Tighten down your scope rings, mounts, actions screws, etc. while in the field, at the range, or at home.

Kit includes: All-in-One Torque Driver (15 - 65 inch lbs); T-Way T-Handle Wrench; 15 different bits: T10, T15, T20, T25, [hex 3/32, 5/64, 1/8, 5/32, 3/16, 2.5mm, 3mm, 4mm, 5mm], P1, slotted #5; 1/2" Socket and 1/4" bit adapter set; and Zippered case with Molded Holder.

29835 \$112.00

Replaceable Edition Shooting/Hunting Kit

This kit offers unmatched portability, functionality and versatility. Two Fix It Sticks (which combine to form a T-Handle) and 16 bits are held in a molded bracket for portability/storage. Extra room on each end can hold two additional bits. Includes two sticks, bracket, and 16 different bits: 2.5mm Hex, 3mm Hex, 4mm Hex, 5mm Hex, T-10, T-15, T-20, T-25, T-30, 1/8" Hex, 5/64" Hex, 3/32" Hex, 5/32" Hex, 3/16" Hex, Slotted #5, and Phillips #1.

29843 \$40.00

Mini All-in-One Torque Driver

Tighten scope rings, red dot sights, mounting plates, etc. Just turn the drive handle until the hash mark lines up with the torque value you need (from 6 - 25 inch-lbs).

29837 \$55.00

All-in-One Torque Driver

Tighten scope rings, mounts, action screws, etc. Just turn the drive handle until the hash mark lines up with the torque value you need (from 15 - 65 inch-lbs).

29836 \$60.00

Scope Bubble Level Set

Level your optics with machined aluminum levels, featuring precise UK-sourced bubble vials. Kit includes: Magnetic level, NATO/Pic rail level/anti-cant device, and Protective foam carrier with pouch.

29839 \$50.00

Scope Jack

A new way to level your optic, the Scope Jack works with Any 1/4 inch driver to quickly and easily level your scope to your NATO/Pic rail. Just mount the Scope Jack to the rail under your scope and turn the drive handle until the lifting arm engages with the flat section under your turrets. Once the scope is level, maintain pressure while tightening your ring screws to keep optic level throughout the process.

29838 \$44.00

Bolt Carrier Group Scraper

Custom bit that is designed to clean carbon off the various surfaces of the Bolt Carrier Group. Works with any standard magnetic 1/4" driver. Black Isonite finish for increased corrosion resistance and strength.

AR-15 (Top) 29840 \$10.00
AR-10 29841 \$10.00

Glock Tool Kit

Glock tool kit including two custom bits designed to aid in the assembly and disassembly of Glock Handguns / Front Sights. Includes: *Glock Front Sight Tool*, a 3/16" Hex Thin Wall Nut Driver - Integrated magnet holds the screw securely in place. Machined from Solid Steel Bar Stock. Works with any standard 1/4" bit driver. 3/32" Metal Pin Punch - Punch is sized to ensure easy removal of all Glock pins by hand. Machined from Solid Steel Bar Stock.

29842 \$16.00

Remington Bolt Opener

Access your Remington 700 firing pin quickly and easily in the field with our compact custom bit. Levers the firing pin head with a "bottle opener" action. Molded synthetic polymer bushing protects bolt plug from damage.

29844 \$20.00

Master Sight Pusher™

The Real Avid Master Sight Pusher is a professional-grade tool that makes quick work of changing pistol sights while protecting both gun slides and the sights themselves. Heavy-duty, built to last and smartly designed to work on most any modern pistol sights. The oversized, ergonomic Easy Torque™ Handle partners with extra-fine drive threads to provide maximum torque with minimal effort when removing or installing sights. The Universal Press Block features multiple contact surfaces for almost any size and style of press-fit dovetail slots and sight profiles. Adjustable non-marring contact surfaces securely hold both 1911 and flat-bottom pistol slide styles.

Master Sight Pusher

Hex 5/64, 3/32, 7/64, 1/8, 5/32, 3/16

29846 \$20.00

Quality Practice: Structure and Guidelines

**By Christian Sailer, 2022 IPSC World Champion,
Dillon Precision's Sponsored Shooter**

The only way to improve your shooting ability is to practice. How fast you improve is directly correlated with the quality of your practice. We have all fallen victim of going to the range without a plan, shooting a bunch of rounds and not learning or improving. Let's discuss how we can ensure that each practice is a quality practice that takes steps forward rather than back in our shooting progression.

Where we're at in the season dictates the focus of each practice session, but the core outline stays the same. Each of my practice sessions are comprised of a dryfire warm up, cold start, fundamentals check, and then 1-3 drills or scenarios. Let's break it down.

The dryfire warm up is essential to every practice session. You never see baseball or basketball players skipping a warmup, so why should you? IPSC is a dynamic sport requiring athletic performance on demand, and you should treat your body and practice like a high-level athlete. This dryfire warm up should be structured and done before matches, home dryfire sessions, and the dryfire warm up before practice. I always start mine with light dynamic stretching. A few of the exercises include squats, arm circles, hip circles, plank walk outs, lunge torso twists, and hugs into chest expansion. Now that the body is ready to start training, I work into my shortened dryfire routine.

This starts with building the grip without a draw from the holster and slapping the trigger to the rear. This checks that the grip I have will keep the sights aligned in the center of the target with the grip pressure I'm applying throughout an aggressive trigger pull. I then work this into my draw, ensuring I build up a grip conducive to shooting points at a high rate of speed from the holster. Grip is essential to this game and will build confidence as you improve it. Next, I work on target transitions, getting the eyes warmed up to picking a spot in the center of each target and waiting until the red dot or iron sights meet what I'm looking at. I usually have an array of targets up, but

while warming up at a safety table, I pick out spots on the wall or flowers/shrubs in the berm. Keep working draws, target transitions, trigger pulls and other gun handling skills until you feel confident and have a good feel for your vision and manipulation. This isn't the time to go for your fastest reload, just focus on the process, and let your subconscious training take over.

Now it is time to load your gun up with live rounds! But wait, don't just jump right into the drills you've planned, let's take advantage of the "cold start." Many people are nervous about their first or "cold" stage as in

not hot or warmed up yet from shooting rounds. This is like the first stage we face in competitions, and let's treat it as such. Whatever drill you're shooting that day, plan a little run on it, maybe multiple positions, visualize and walk the stage like a match and shoot it as such. This is a great evaluation of where your skills are at on demand and can help shape your next practice session if it exposes any weaknesses.

After the cold start, evaluate how it felt. Was my grip feeling good out of the holster? Were my eyes picking up the center of each target? Was I shooting subconsciously, and did I shoot the plan? Where did I think my shots went, and more importantly, *where* did they actually go? Use this as data for a future training session.

Now we have completed our dryfire warm up and cold start. Depending on where we're at in the season, I'll do a short fundamentals check. Shooting a few pairs at different distances assures I am shooting

at sights pace and my grip is producing a linear sight path. On a day that focuses on movement, using poor fundamentals could reinforce bad habits. This is the reason behind a fundamentals check. Shooting a few magazines to make sure everything is locked in is worth it. It's now time for the meat of my practice session. As a match approaches, I will simulate mini stages and practice executing on demand. Each run I'll pick and memorize a different sequence to shoot. Outside of simulated scenarios before a big match, I primarily focus on single- and multiple-target engagements along

with movement. I'll pick a few various drills or short courses that focus on a particular skill to improve upon. For single-target engagements I'll pick drills that focus on grip/stance, trigger control, or vision, focusing on this heavily early in the season's progression. Multiple-target engagements focus on engaging arrays with accuracy and efficiency. Changing the distance and difficulty of targets and snapping from the center of each uses what I learned on single-target engagements to hit the center. For movement, I focus on how to enter and exit positions and cover the distance in between. I'll use cones or barricades to simulate positions. This is also a good time to practice shooting on the move. That's a basic outline of some of the "meat" of a practice session and days could be spent talking about drills and skills for this, but there are many qualified instructors, series of books, and online series that provide greater detail.

After completing the main portion of my training, I'll always end with right- and left-hand only (strong- and weak-hand) training. I leave 3-4 magazines to dedicate for this training at the end of my practice. Since we shoot 99.99 percent of our shots with both hands, we often neglect training our single-hand shots. Baking this into each practice ensures this skill receives attention and can help separate oneself in the match. I suggest keeping a journal to recap the training session, what was worked on, how many rounds were shot on what gun, and notes for the next practice session. During this time, I think about my upcoming matches and goals for the year.

Now that we've covered the overall structure, it's important to discuss some guidelines and advice for your training. Practice things harder than what you'll see in a match. Practice what you failed on in your last match. Practice what scares you and shakes your confidence. Shooting at 10 yards and hosing rounds across the range may feel great but doesn't help you get better. Constantly pushing your boundaries and working outside your comfort zone is essential for growth. You should prepare

for everything you'll encounter in a match. Practice small steel at distance, prone position, unloaded starts, and you'll find an edge.

Each practice must have a purpose and you must come with a plan. Practice sessions that lack a plan often turn into 10-yard hosing practice, which will stunt your growth. Similarly, every round fired in your practice must have a purpose. After shooting them you must assess how it felt and what you called (meaning where were the sights on the target when the bullet left the barrel and the sights lifted). Before a training session, make sure to come prepared. Make sure your gear is cleaned and magazines are loaded. I pre-load all my magazines before I arrive to maximize my time on the range and focus on the training. I keep a list of accessories and gear to bring to make sure I have everything. Leaving a stapler or target stands at home always makes for a tough practice session.

Video analysis has been helpful for my development. If you train with a partner, have them record runs. If you're shooting solo, a tripod works great. Finding a good training partner (or partners) is great to help keep you accountable, develop range camaraderie, and share ideas. I've been very lucky to train with a group of great people and a few GMs starting out, and now I primarily shoot solo or with a good LE friend of mine. We balance catching up and overall camaraderie while still pushing each other and getting great training.

Training is fun and exciting, but it's also a grind and won't always be fun when you're trying to improve. Failing and making mistakes will happen, but if you aren't, you aren't pushing hard enough. Set goals and create an action plan to reach them. Nothing is better than reaching your shooting goals through dedicated practices and looking back with a smile at your progress. The entire crew at Dillon Precision and I would like to wish you the best in your upcoming training and matches. Make it happen and see you on the range!

MORE KIMBER THAN EVER!

KDS9c FEATURES

OPTICS-READY SLIDE

15+1 ROUND CAPACITY

SUPERIOR ERGONOMICS

REVERSIBLE MAG CATCH

For over 30 years, Kimber has crafted a reputation for superior quality 1911s. With the introduction of the KDS9c, Kimber doubles down on capacity and takes quality to the highest level. From tremendous accuracy to relentless reliability, the KDS9c comes standard with two 15-round magazines that give you the capacity you want and the accuracy you need. 10-round magazines are available in compliant states, and 18-round extended magazines will be available soon. The KDS9c delivers more Kimber than any pistol before it because a Kimber is what all guns should be.

BLADE-TECH Tek-Mount

The Tek-Mount™ is a two-part quick-connect mounting system consisting of a Receiver and a 360 Insert Disk™. This mounting system provides the same function, speed, and ease of use as the Safariland® QLS but with the added ability to cant your holster instantly without the use of screws or posts. The patent pending Tek-Mount mounting system allows for 10-degree cant increments in 360 degrees. The Tek-Mount Receiver is to be affixed to Belt attachments as a belt mount, Molle Attachments, Drop-Leg Platforms, and more. While the Tek-Mount 360 Insert Disk is to be affixed to your OWB holster, mag pouch, knife sheath, or any other carried gear. *NOTE: Hardware included with all below.*

DILLON RIFLE COMPANY

The OPAR Operator Trigger is a complete-assembly pre-stage drop-in trigger purpose built to provide improved trigger pull weight, reset, clean feel, precision, and safety for day-to-day users, military and law-enforcement members and agencies. The trigger's form enhances precision capabilities through its Area-of-Engagement design. This is accomplished by helping shooters build muscle memory for their trigger-finger placement in a simple and natural way.

It has a clean 5.0 to 5.5-pound trigger pull weight with a short trigger reset. The OPAR Operator's patent pending pre-stage trigger mechanism design has an inset secondary trigger providing an additional safety mechanism to reduce the chances of an accidental discharge. The OPAR Operator is compatible with AR-15 and HK416 rifles using the Mil-Spec 0.154-inch pins.

Dillon Rifle Company AR-15 OPAR Operator Trigger, Curved

The Jalapeño

You shoot a lot and your gun gets hot. Then, without thinking about it, you put your rifle into its case or someplace else equally tender. I have mauled several rifle cases, burned a car seat, and have at least one scar from doing exactly this. This is why we created The Jalapeño. Actually, we made the original The Jalapeño for the Minigun. With it, we could dump 3000 rounds in a minute or so, slip The Jalapeño over the barrel group, pull the gun off the mount and stow it right away. 23.5 in. (l) x 8 in. (w), Made in the U. S. A.

CED Edge Dual PCC Rifle Case

The CED Dual Rifle case gives you two in one! Two rifles and three modes of carry, all in one great PCC rifle case. Excellent protection for your expensive competition PCC and AR rifles, this case includes storage for two pistols and lots of magazines as well.

Comes with a handle, shoulder strap, and

backpack-style shoulder straps, which tuck away when not in use or can be removed if not needed.

The MOLLE PALS system across the front of the case, allows the user to add optional accessory cases to the rifle case itself.

The case measures 35.43" x 11.81" inside the main compartment.

10977 \$99.99

CED PCC Mag Storage Pouch

The perfect companion for your range bag, rifle case or backpack! Holds up to six extended PCC straight magazines of up to 42 rounds and can accept magazine lengths up to 10 inches.

Measurements are: 12.75" Wide x 11.5" High closed (open approximately 12.75" x 19.0"). The pouch pocket length is 6.25."

10978 \$15.99

CED PCC Rifle Sleeve

The CED PCC Rifle Sleeve is the ideal companion for competition stage use. It's a lightweight, water-resistant neoprene zippered sleeve that folds up easily to fit into a range bag or backpack. Perfect for covering and protecting your PCC rifle when carried in a trolley or wagon at the range. Weighs only 8 ounces and measures 33" inside.

Nighthawk Custom Drop-In 1911 Trigger System

When looking to upgrade the performance of a 1911 pistol, a common improvement sought by shooters is a high-quality trigger job, with a crisp, clean break. Until now, a high-quality trigger job has never been in the realm of a "drop-in" upgrade. Nighthawk Custom has changed that with the introduction of its Drop-In Trigger System (DTS) for 1911 pistols.

An all-in-one unit, the DTS replaces your existing hammer, hammer strut, sear, disconnector, and sear spring. Your existing sear pin and hammer pin will be retained for use with the DTS, but no other parts are necessary for installation. With a steel housing securing the unit, the DTS features all Fully Machined™, stainless steel internal components. The traditional three-pronged sear spring is no longer necessary as the springs for the disconnector and sear are built into the unit. A single-leg grip safety spring is included with the DTS to replace the existing sear spring.

The DTS is designed for use in most 1911 models, and installation is simple enough that minimal gunsmithing skills are necessary.

RMR Bullets: Jacketed

By Duane Thomas

There are various sorts of bullets available today: bare lead, plated, polymer-coated, and jacketed. No one disputes that, certainly when it comes to accuracy out of autopistols, jacketed bullets are best. However, among serious shooters – the sort of people who shoot thousands of rounds a year – probably the most popular choice for bullets to load into practice ammo has been, for decades, plated bullets. Many people run plated for practice, jacketed for matches, for one simple reason:

affordability. Jacketed bullets typically cost significantly more than plated bullets. Wouldn't it be great if there were a company out there selling high-quality jacketed bullets at plated bullet prices? And even better, what if they threw free shipping into the deal, as well? Enter RMR Bullets (rmrbullets.com).

JACKETED ADVANTAGES

Before we get into RMR Bullets in particular, let's discuss why shooters, in a perfect world, if we could subtract cost as a consideration, would like to be running jacketed bullets for everything.

Pretty much no one disputes that jacketed bullets are the best for high-volume pistol shooting – better than bare lead (absent a sport like Cowboy Action Shooting that absolutely mandates bare lead bullets for reasons of historical authenticity), coated or plated, especially if the ammo will be fired in an autopistol and accuracy is a huge concern. But why is that? In order to answer that question – and since, for decades, the go-to among serious shooters for bullets to load into practice ammo has been plated – let's look at how plated bullets differ from jacketed bullets. (For purposes of discussion, we will leave aside bare lead and polymer-coated, since bare lead is less-than-optimal for reasons of smoke and potential lead poisoning, and pretty much everything I'm going to say about plated bullets, on a functional level, applies to polymer-coated, as well.)

Plated bullets have had particles of copper electrochemically bonded to a lead core; the resulting plating is fairly thin, typically .003" to .004" thick. Thin plating, combined with the fact that bullet platers typically also hold down cost by using really soft lead for the core, means plated bullets can be easily deformed while feeding through an autopistol's action. Actually, it's not at all unknown for the plating to be pierced and scraped away, exposing the soft lead underneath, during the handloading process.

Typically, a true bullet jacket is about three times as thick as plating, around .012". RMR jackets are about .015" thick on the walls for both a round-nose or hollowpoint (also .020" at the nose for a round-nose, and .020" at the base for a hollowpoint). The lead core used in RMR bullets runs 8-10 on the Brinell scale; this is quite hard by lead standards.

I was very fortunate while researching this article to be able to get input from Jake Wilcox, the president and owner of RMR Bullets. Jake commented, "We use a harder core mostly because it helps us get a more consistent weight and cleaner core from our core machines. However, it does seem to translate into a better bullet. We've got a Lee hardness tester that says it's 10-12 BHN, but we've had customers tell us they test it out at 8, so I'm not really sure what it actually is."

In any event, my own experiences show absolutely no deformation of RMR bullets loaded into 9mm cases, even after being hand-cycled into and out of a chamber numerous times. Having a thick, hard bullet jacket around a hard lead core prevents the bullet from deforming during feeding, in a way that bare lead, soft polymer, and thin plating (the latter two typically applied over soft lead) does not. This means better accuracy, also it means bullets that survive handloading unscathed much more readily.

Bullets at Plated Prices!

RMR BULLETS

RMR Bullets is a fairly young company. "RMR" stands for Rocky Mountain Reloading. Located in Lewiston, Idaho, they've only been around since 2007. Currently they make exactly 15 products for sale. (Their website also sells some stuff made by other companies.) Ten of those are 9mm bullets: round-nose and flat-nose in 115-, 124-, 135- and 147-grain weights, as well as 115- and 124-grain hollowpoints. 135- and 147-grain 9mm hollowpoints are planned for introduction sometime in 2024.

RMR sells two bullets for .357 Magnum, though they're very honest about the fact these are simply their 124- and

147-grain FP 9mm bullets run through a .357" die instead of .355". (As an interesting – I think – note, RMR actually sizes their 9mm bullets to .3555" to help ensure a good gas seal as they're traveling down the bore.) Also, a 95-grain .380 RN. They make some hollowpoint slugs for airguns, as well – so I guess you could say they make more than 15 products.

RMR also makes match/hunting bullets for .223 Remington. Sized to .224", and available in both 69- and 75-grain weights, the bullet jacket starts out at .032" at the base, the side walls are held to .026" then as it hits the ogive it instantly thins to .013". These bullets are intended for bigger game than varmints, for instance coyotes. Jake Wilcox said, "We have a pretty large customer base that uses them for pig hunting with good results. We call the .224 bullet the 3GH, which stands for 3-Gun Hunter. Kind of a catchy way to help people remember this is both a match bullet and a hunting bullet." Honestly it took me a moment to figure that one out, then I thought, "Okay, 3-Gun equals competition, then Hunter equals hunting. Got it."

By the time you read this, RMR will have released their first .45 ACP bullet, naturally a 230-grain RN. "They all fall to hardball!" Currently they're working on .45 bullets in 185- and 200-grain weights, also .40-caliber bullets in 155-, 165- and 180-grain weights, all of which should be released at the same time, hopefully in October 2023. The .45 bullets will all be RN first, with FP to be released later. The .40s upon release will be FP only.

You could say that RMR Bullets is in the process of growing their product line.

JACKETED BULLETS AT PLATED PRICES

The great attraction to RMR's bullets, in addition to their quality, is of course their price. Not only do their jacketed bullets cost what we're used to paying for plated, they even throw in free shipping.

Jake Wilcox commented, "Occasionally someone will say to me, 'Well, you say you sell jacketed bullets at plated prices, but I saw that <fill-in-the-blank bullet company> is selling <fill-in-the-blank bullet> and their price is better than yours!' My response is, 'Yes, <fill-in-the-

blank bullet company> may actually have a price *slightly* lower than ours. But that's before they sock you with at least \$25 worth of shipping. We don't do that.' Customers often call me to ask what the shipping charge will be, and I always tell them, 'What you see is what you pay. We don't hide shipping until you get through checkout. You can purchase shipping insurance at checkout if you want, but even that you don't have to.'"

SUMMARY

As I type this, I have put about 6,000 RMR bullets through various 9mm pistols, about half-and-half their 124-grain and 147-grain FPs. To say I've been pleased with their performance would be an understatement. Previous to this, I was using <fill-in-the-blank bullet company>'s plated bullets. The RMR jacketed bullets' resistance to deformity during both handloading and actual shooting, and the resultant accuracy, makes the plated bullets I was previously using

look sad. There's something about knowing, if we do our part, the ammunition can hold up its end too, that engenders good performance.

Given all that, I'm really seeing nothing not-to-love here. As I said to start, no one who wants to be taken seriously disputes that jacketed bullets are the best. People only go for less-desirable bullets for financial reasons. Really, who wouldn't prefer to be buying jacketed bullets at plated prices?

Swab-its

No s#!+, there I was...in my office, cleaning my revolver when the boss walks in with that "whiskey-tango-foxtrot" look on his face. "Hi," I said (*thinking fast*), "I'm trying out these Bore-tips before I write the **Blue Press** copy for them. They work GREAT!" The **Bore-tips Swabs** REALLY DO work. What you can't see under the foam is a plastic jag sized for a tight bore fit which provides for the uniform application of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reusable.

29033 **\$39.99**

The 1911 Smart Wrench's ergonomic design fits comfortably in your hand while you remove the barrel bushing, and the strategically placed cavity catches the spring. Removes the barrel bushing from the Officer's and Government model 1911s.

11656 **\$12.99**

The Chamber Boss –AR15™ All-In-One AR15 Chamber Cleaning Kit. Every tool you need to easily eliminate baked-on carbon from the AR15 chamber.

21778 **\$29.99**

Installing a pivot pin is a small step that can quickly become a giant pain in the neck. Meet the AR15 Pivot Pin Tool – the one tool guaranteed to take the nail biting, pin-launching task of installing a pivot pin and turn it into something you might actually look forward to. Align the guide, insert the spring and detent pin, slide the pivot pin into place. Click. Snap. Done.

29034 **\$11.99**

Carbon Boss™ – AR15. This is the most comprehensive carbon removal multi-tool ever built. Extremely versatile, it has 12 precision surfaces to clean the most critical parts of your bolt, bolt carrier, cam pin, and firing pin. It's the enemy of your AR15's worst enemy.

29039 **\$34.99**

The unique Accu-Grip™ Picks and Brushes get the job done, feel good in your hand, and won't scratch your firearm. Eight profiles dig gunk out of the places that even the sun don't shine. They're tough on the crud but tender on the metal. A better designed, better built detailing kit that just might make your dentist jealous.

29036 **\$11.99**

The AR15 Brush Combo™ contains the critical components you need to keep your AR15 chamber and bore carbon free. It contains a star chamber brush and star chamber mop for cleaning inside the hard to reach star chamber. Star chamber pads help collect left-over carbon while applying the perfect amount of oil or solvent. The .223/.56mm bore brush scrubs baked on carbon from lands and grooves.

29037 **\$9.99**

There's no easy way to scrape carbon out of the star chamber of an AR15 unless you're a surgeon. That's why you use a star chamber brush to loosen the carbon then remove it with these star chamber cleaning pads. Done deal. Now get back to shooting. 20 wool chamber pads per package.

29038 **\$12.99**

Real Avid Gun-Cleaning Chemicals

BORE-MAX™ BORE FOAM

Powerful gun-metal grade foaming solvent is specially formulated to expand and penetrate within the gun bore, rapidly and effectively dissolving performance inhibiting copper and powder fouling.

12oz. can Bore-Max **40215** **\$13.99**

FOUL-OUT™ GUNK BLASTER

Foul-Out Gunk Blaster blows away grease and grime fast. This powerful gun-metal grade solvent quickly strips gun actions of burnt powder, oil and grease, eliminating malfunctions of moving parts due to fouling and build up. Quickly cleans chambers, actions, trigger groups, bolt groups, slides, choke tube threading, semi-auto gas ports, extractors, ejectors and other hard to reach areas.

12oz. can Foul-Out **40216** **\$13.99**

GUN-MAX™ GUN OIL

Gun-Max's advanced gun-metal grade formula sets a new standard for protecting, lubricating and cleaning modern guns. Powerful inhibitors displace moisture delivering extended corrosion protection. Advanced anti-friction additives bond to metal surfaces for longer lasting lubrication of moving metal parts. Maximizes performance of semi-auto guns with high cycle rates. Formulated to excel in sub-zero temperatures and harsh operating conditions.

12oz can Gun-Max **40214** **\$13.99**

THE FAST, EASY WAY TO ACCURATELY BORE SIGHT YOUR RIFLE.

Viz-Max™ is a revolutionary, yet uncomplicated, next generation V instrument. No more fumbling with extra pieces and underpowered lasers to find your mark. Housed in the rugged and protective exoskeleton is a precision machined, factory calibrated laser. The laser projects a powerful green dot providing maximum visibility and quick acquisition. The bore attachment is fast and easy with the hold-fast neodymium magnet.

10134 **\$129.99**

Real Avid Smart TORQ™

The most precise and technically advanced torque driver for guns. Specifically developed for optics mounting and gun builds. Discrete inch-pound-increment settings provide spot-on torque adjustments. Comfortable ergonomic grip with Force Assist makes tool manipulation a breeze. The functionally intuitive torque setting with visual, tactile and audible feedback provides confident assurance. To get you started, Smart Torq comes with 12 of the most commonly used gun bits. Never over-torque a scope ring again!

Real Avid MASTER GUN VISE™

MULTI-AXIS BENCH-MOUNT VISE WITH TORQ-LOK™

One vise to rule them all. The first real bench vise made exclusively for guns and gun tools. Whether you're building and customizing, repairing and cleaning or mounting scopes and accessories, this vise improves every part of the GUN DIY® experience. Quickly reposition your gun to any orientation without ever removing it from the vise. Insert the Torq-Lok pin for applying heavy force. Use the removable and reversible Gun-Fit jaw sleeves (*not pictured*) for a specific gun grip or turn the leveling knob for simple scope mounting and leveling. Build. Customize. Repair. Mount. Clean. All hail the King....

Real Avid AR15 Bolt Catch Pin Starter & Pin Punch Set

Two punches, one simple solution to the difficult-to-access bolt catch retaining pin. The orientation of the pin, close proximity to the lower receiver, distance required to safely punch a pin, and the difficulty in getting the pin started makes it a real pain with standard punches. Our simple solution is specially designed to fit flush against the receiver without damaging it, and is long enough to reach the pin. It features a roll pin punch for removing pins and a magnetized roll pin starter punch that eliminates the need for a third hand. Smart, simple, frustration free.

Real Avid LUG-LOK® Upper Vise Block

Real Avid designed an upper block that leverages the strongest part of the gun – the barrel lugs inside the star chamber. The Lug-Lok is precision machined and precisely fits into all Mil-Spec uppers. It mates perfectly with the barrel lugs, while allowing you to rotate the upper to be able to work on different sides. The Lug-Lok is the safest, easiest and smartest way to lock down an AR15 or AR10 upper into a bench vise.

Real Avid Level-Right™ PRO

A level reticle is critical to long-range accuracy. For longer shots a canted reticle will pull or push a bullet's trajectory off of vertical center. It gets worse the more the distance increases. A level scope means that the reticle will be perfectly aligned with the rifle bore. Balancing small levels on a scope turret and gun receivers has been a commonly accepted

practice for years. Not only is this a clumsy process, it's wrong. The turret on most scopes is not perfectly aligned with the reticle, so even if your turret is level to the gun, your scope may not be. Level-Right PRO simplifies scope alignment in four easy steps. Accurate and intuitive, this instrument quickly aligns the actual scope reticle to the horizontal gun plane, which is key to the long-range accuracy of your rifle. Level-Right PRO helps you quickly and confidently mount a scope for maximum accuracy.

Real Avid ARMORER'S MASTER KIT™

This kit of Master Grade Tools and how-to information equips you to confidently tackle everything from building your own gun from the ground up to customizing or modifying an existing gun. With better tolerances, materials and expanded capability, every tool is carefully designed to make each job as simple and easy to execute as possible. Housed in a professional tool case and equipped with step-by-step instructions, you will be able to work smarter and create better guns regardless of your experience level.

31401 \$279.99

ARMORER'S MASTER WRENCH™

The Real Avid Armorer's Master Wrench features best-in-class strength, precision fitment and ergonomic intelligence. Wrenches seat squarely for a no-slip fit on stubborn barrel nuts, castle nuts, muzzle brakes, or fixed stock receiver extensions. Industry first torque wrench attachment location is optimally positioned to provide consistent torque for all nuts. As a bonus, interchangeable hammer heads make the Armorer's Master Wrench a "Master" hammer as well! This is the right tool for the job... and for you.

31402 \$79.99

BORE BOSS®

The single piece Dual Action Cable with integrated phosphor bronze brush and braided mop wraps around the unique Flex-Case Handle to keep the system stowed and organized. To use, simply flip, feed, clip and pull. Throw it in your pack, or put it in your pocket. It's the next best thing to a self-cleaning gun.

AR15 FRONT SIGHT ADJUSTER TOOL

This smartly designed tool makes front sight adjustments quick and easy. The stainless steel shaft is knurled to create no-slip leverage when turning tight posts. It works on both A1 & A2 front sights and the compact design won't clutter up your bag.

31403 \$9.99

THE AR15 SCRAPER™

PRECISION, MULTI-FUNCTION CLEANING TOOL FOR AR15 BOLT CARRIER GROUPS

A dirty bolt carrier group (BCG) is the number one cause of AR15 malfunctions. Carbon is the enemy and it quickly builds up in hard-to-clean areas. This precision-made tool gives you the power to easily demolish carbon from 12 surfaces on the bolt carrier, bolt, bolt cam pin and firing pin. Clean it fast, clean it right.

31404 \$19.99

THE AR10 SCRAPER™

PRECISION, MULTI-FUNCTION CLEANING TOOL FOR AR10 BOLT CARRIER GROUPS

A dirty bolt carrier group (BCG) is the number one cause of AR10 malfunctions. Carbon is the enemy and it quickly builds up in hard-to-clean areas. This precision-made tool gives you the power to easily demolish carbon from 11 surfaces on the bolt carrier, bolt, bolt cam pin and firing pin. Clean it fast, clean it right.

31405 \$19.99

Slip 2000 Products

725 Gun Cleaner Degreaser

should truly be called Super Degreaser. This water-based cleaner will cut through the toughest cosmoline, carbon, grease and grime! Its super strength allows it to degum and degunk the dirtiest of gun parts when sprayed on or used in parts washers or solvent tanks! **NOTE:** To help prevent rusting, users must apply a gun lubricant immediately after cleaning to disperse any moisture in parts.

16 Oz. 19237 \$24.00

Slip 2000 Carbon Killer

provides you with a safe, effective way to clean carbon, lead and plastic wad fouling. Unlike other gun cleaners, this product is non-flammable, non-hazardous and biodegradable. Designed for soaking metal parts with baked on carbon, Carbon Killer dissolves carbon and lead on contact. **NOTE:** Carbon Killer is for cleaning internal metal gun parts with baked on carbon by soaking them. It is an aggressive cleaner and should not be used to clean the outside of your gun. It can damage and even remove some finishes.

15 Oz. 19234 \$24.00

Slip 2000's **Extreme Cleaning System** contains 2 Oz. bottles of: Carbon Killer Bore Cleaner, 725 Gun Cleaner Degreaser, and EWL Extreme Weapons Lubricant.

11652 \$28.00

Slip 2000's **AR Cleaning System** contains a 7 Oz. bottle of Carbon Killer Bore Cleaner, a 15cc syringe of Extreme Weapons Grease, and a 1 Oz. bottle of EWL Extreme Weapons Lubricant.

11676 \$22.00

Slip 2000 **Extreme Weapons Lubricant** (EWL) was designed for use on chain guns and machine guns like the MP5 and the 249SAW. It contains a proprietary Anti-wear agent that reduces friction and wear by 90-95 percent. It is an excellent CLP and is able to clean, lubricate and protect.

4 Oz. 11644 \$21.00

Slip 2000 **EWL30** has the same properties as EWL, except it is a lot thicker. It contains a proprietary thickening agent that makes this lubricant consistency like a 30-weight motor oil. It was designed for those who want or need a lubricant that will not migrate at all and don't want to use a thick grease.

4 Oz. 11645 \$24.00

Slip 2000 **Copper Cutter** is specially formulated to remove copper, lead, powder residue and plastic wad fouling from bore surfaces with little scrubbing! **NOTE:** It is a water based, ammonia enhanced product and will remove all lubrication or oil protection, so always re-lube all parts cleaned.

4 Oz. 11646 \$14.00

Each Slip 2000 **Gun Wipe** packet contains one 5" x 8" wipe treated with Slip 2000 Synthetic Gun Lube. Perfect for wiping your guns down after a day on the range or while out on a hunt. Apply to all metal surfaces. Great for light carbon cleaning. Safe for all firearm stocks and grips.

20 Pack 11674 \$17.00

MIL-COMM Extreme Performance Lubricants

TW-25B is the choice of leading firearms manufacturers, armorers, pro shooters and gun enthusiasts, and is recognized as the world's best all-purpose weapons lubricant/protectant. It is now widely specified by the U.S. military for their most critical performance weapons systems. Environmentally safe, non-carcinogenic, non-ozone-depleting.

Justified Defensive Concepts, LLC

Shooters who compete in several disciplines can now use one target to practice USPSA, IDPA and ICORE or train with various dot-torture and bullseye arrays. The National Target Company, Inc. is offering the Justified Defensive Concepts, LLC Multi-Use Training Target. Sized 22.5" x 35" on lightweight paper, this target's versatility is almost unparalleled for handgun, pistol-caliber carbine and rifle training or practice. It comes in a package of 50 targets and just might be the ONLY target you'll need for your shooting session.

TCRT

Advanced Ballistic and Engineered Solutions

TCRT targets are made of Linagard® Ballistics FR™ rubber, a purpose designed ballistic rubber.

The TCRT targets can be shot with solid pistol, rifle and shotgun ammunition – from .177 to 00 buckshot.

- Safe for indoor and outdoor use
- Self-healing – Extreme stretch of over 833%
- Can be painted to further highlight hits
- Will withstand very high shot count before requiring repair
- UV and ozone stable

Dillon Precision's XL750:

My Move to the Progressive Side of Reloading

By Mike Hardesty

I have reloaded ammo for close to 50 years. I spent all that time working with two reloading presses (if you don't count the old Lee "whack-it-with-a-hammer" handheld kit). They include a 45-year-old RCBS Jr. single-stage and a Lee turret press. I have, however, always wanted a truly progressive press... one that would produce a loaded round with each pull of the handle, once set up and going. Dillon Precision granted that wish and sent me their excellent XL750 with some optional goodies, in 9mm caliber. If you were like me before I'd gotten the press, you might have some questions about reloading on a full progressive machine versus one of the other types. Let's examine how using a progressive differs.

To Begin With...

Before we get into that, let's take a look at the press itself and its setup. I found the setup to be very different than what those other two presses required, definitely more involved.

It comes shipped in a sturdy box with layered molded foam inserts to keep things separate and safe during shipment. I got the press, the electric casefeeder, and the bullet tray in and proceeded to set it up. I couldn't decide which workbench to set it up on, so I put most of it together before bolting it down. (I know, the manual says to bolt it down first, but I found it easier to attach some of the items on it by turning it sideways. This worked for me, but please follow the directions.) I'm not the most mechanical guy in the room, so I used every advantage I could get. It IS bolted down now, though, and that makes it way easier to use.

How Is It Different?

Coming from the reloading background that I come from, I had to adapt to the new progressive method. I was used to either doing many repetitions of one operation at a time (single stage) or producing a loaded round with four pulls of the handle (turret). Listen up, all you out there that are used to those other methods... the XL750 will kick your butt if you don't pay attention! (Trust me. My butt was well and truly kicked until I figured things out!).

For example, let's look at a case as it moves through the cycle. Remember that a new case will drop every time you operate the handle so that each of these operations will happen to all cases, once the shellplate is fully loaded. Pay attention to what you're doing, or things can go south on you quickly. Remember that

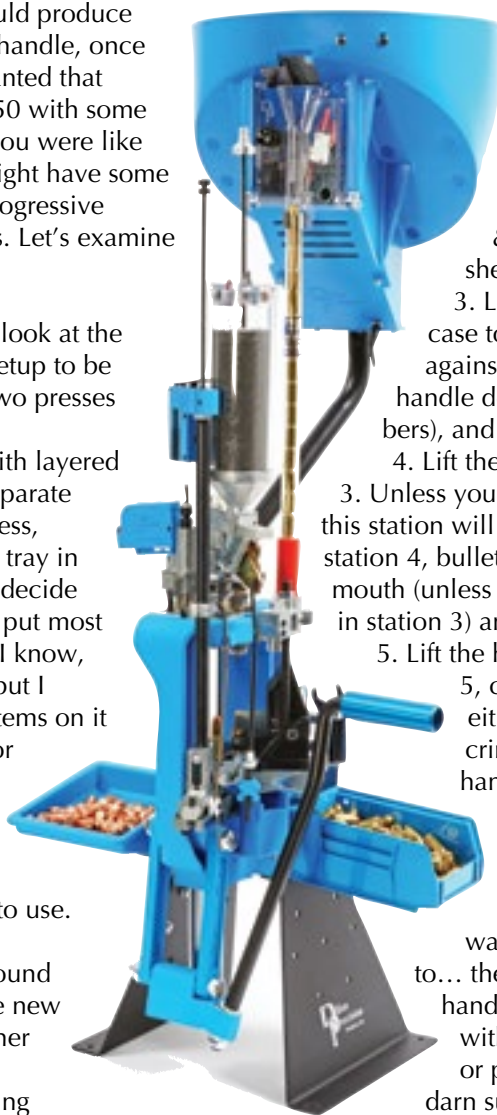

(like most presses) pulling the handle down moves the ram/shellplate up and vice versa.

1. Drop a case from the feeder by moving the handle up (to the back).
2. Operate the handle and resize & decap (handle down) the case in shellplate station 1.
3. Lift the handle again and move the case to station 2. Press the handle forward against its stop and seat a primer. Move the handle down, bell the case mouth (pistol calibers), and drop the powder charge.
4. Lift the handle and rotate the case to station 3. Unless you have the powdercheck die accessory, this station will be empty in the toolhead. Move to station 4, bullet seating. Place a bullet in the case mouth (unless you have an automatic bullet feeder in station 3) and pull the handle down to seat it.
5. Lift the handle and the case moves to station 5, crimping. Press the handle down and either a roll crimp (revolver) or taper crimp (semiauto) is applied. Move the handle up and the completed cartridge is ejected into the collection bin.

As I just said above, remember that each time you cycle that handle, a new case is fed into station 1. This was the thing that I am still getting used to... the fact that every time you operate the handle, a loaded round appears – with or without the proper primer seating depth or powder charge. It's up to you to make darn sure you have things set so that the rounds are loaded properly. Once set, you can load 800 – 1000 rounds per hour. I'm still wrapping my head around that!

Here are a few tips that I discovered...

1. Read through the entire set-up process in the manual

before you start. This will give you a good idea of what's next, and if there's something you need to alter. For example, the bullet case feed support tube. They have you put that on after you've attached the mount for the loaded cartridge collector bin. I had trouble getting my big mitt in there to hold the nut for the bottom case feed support tube bolt. I'm not sure, but it might be easier to put that tube on before you attach the collector bin mount. Read ahead.

2. Set it up in a well-lit area. I had to put mine in one of the darker areas of my garage, so I ordered a light kit. These little LED lights will provide plenty of light to see what's going on.

3. Buy extra primer pick-up tubes and the bullet tray. The extra tubes will allow you to keep going without stopping to refill the one that comes with the machine, and the tray is an ergonomic blessing – it puts bullets literally at your fingertips.

4. If you can, buy the electric casefeeder. This will greatly increase your productivity.

5. Use FULL handle strokes. Go to the stops, both up

and down, otherwise, primers won't be seated properly, and old primers may not get knocked out.

Conclusion

Are you a single-stage or turret-press junkie who is thinking about taking the Dillon Precision plunge? The

XL750 is a great way to break into the progressive side of reloading. It is about midway in their loader lineup, has a lifetime warranty, and handles both rifle and handgun calibers (61 and 24, respectively, not counting the multiple calibers that some of the dies will handle).

If you're thinking that \$1500 or so seems like a lot to invest in a reloader, think again about that. Using the 9mm as an example, I did the math and found that you can recoup your investment (what you would spend on factory 9mm target ammo at around \$20 for a box of

50) in about 4.6 hours of reloading, given current component costs. That's not a very long break-even time.

If you want the best reloader around and are ready to move to the progressive side of things, take the Dillon Precision plunge – you won't regret it!

"Are you a single-stage or turret-press junkie who is thinking about taking the Dillon Precision plunge? The XL750 is a great way to break into the progressive side of reloading."

Henry Big Boy .357 Revolver

By Oleg Volk

When Henry Repeating Arms announced a revolver to complement their .357 Magnum carbines, the brand fans were excited. Everyone else wondered how a company with no track record in this field would do in a very specialized design task. Early prototypes confirmed the expected: blued steel and brass revolvers had the distinctive Henry visual style. On the outside, the 4-inch gun resembled 1877 Colt Lightning, with a pronounced flat horizontal line above the grip. An unshrouded but partly recessed ejection rod brings to mind Hi-Standard rimfire models. Internally, this revolver is all original, with an unusual floating coil mainspring that's not attached to the backstrap. The non-firing prototype arrived for photos: playing with it, I was undecided on how well I liked it. Eventually, a production sample showed up and went to the backyard range with me.

Metal-to-metal and metal-to-wood fit and finish are very good. The only part to have two non-chamfered edges is the hammer, but in a way that never contacts the hands. The laser-engraved markings likewise feel textured to the touch, but they're all in spots untouched by the shooter's hands. My sample has a square grip, a bird's head grip variant is also manufactured. Since the serialized frame is separate from the brasslite grip, I suspect that the two grip styles can be interchanged. The left-side wooden grip is properly relieved for speedloader use. The cylinder diameter appears to be a fraction under S&W

L-frame dimensions, so L-frame leather holsters fit it quite well. L-frame speedloaders can be used but imperfectly. Ruger GP100 speedloaders should fit more closely. The ejector rod head is generously sized, so it's easy to kick fired cases clear of the chambers. The lockup is quite tight, and the cylinder gap seems quite small for a field gun. I don't have gap gauges, but the modest gap blast is consistent with the impression.

The rear sight is a squared groove in the receiver. Despite my theoretical trepidations, the curved sides of the receiver next to it didn't affect the sight picture at all in actual use. The front sight is a smooth ramp. Again, I had apprehensions about the visibility of the sight picture: in reality, a very clear light sight blade remained plainly visible in the rear notch with just a little air on both sides to aid alignment. The front sight is held to the barrel by one large screw. Taller and shorter front sights are included with the gun. I found that the default medium height produced very close points of impact out to about 12 yards but fell low past that. The short front sight was good out to 100 yards at least.

The greatest unknown in this design was the trigger. I've seen it rated at 3.5 pounds for single action, but my gauge indicated 6 pounds even. Double action was heavier than the gauge 10-pound limit, probably around 12. That said, the subjective trigger weight felt closer to 3.5-4 single action and 9 double. Double-action pull is smooth and consistent throughout. A heavily curved

trigger provides excellent leverage, but it also makes accuracy contingent on getting used to the let-off. At 10 yards, shooting single action slow fire, hits can be just about overlapped. Excellent accuracy can be achieved past 100 yards with two-handed holds and past 50 one-handed. For double action, my own limit is 30 with two hands and no more than 15 one-handed. I could not get consistent leverage to handle the heavy trigger without the support hand. This revolver doesn't just borrow looks from single-action cowboy guns; it has similar ergonomics. The flat hammer strikes the firing pin through a transfer bar, so the design is drop-safe.

The cylinder locks up in the center in the back and on the front of the crane. The front of the frame is smoothed in every edge, making it easier on the hands than just about any other swing-out cylinder revolver on the market. The flat, notched release latch is pushed forward to unlock the action. The star in the back of the left-rotating cylinder is very robust. The cylinder notches are offset from the thinnest portions of the cylinder walls. Disassembly for cleaning is toolless, using the notched release latch inside the trigger guard on the front. It cannot be depressed by accident.

The proof of usefulness is in the performance. Being recoil shy, I first ran through 50 rounds of American Eagle 130-grain ball. Recoil: negligible. Accuracy: excellent. Point of impact: right on at 10 yards, substantially low at 50. Switching to Norma 158-grain ball didn't raise the point of impact much, nor did shooting Federal .357 Magnum 125-grain JHP. Shooting the magnums, while slightly louder, made very little difference in felt recoil. Subjectively, shooting full-power .357 Magnum

defense loads in Henry Big Boy felt like touching off a .38 Special target load in a S&W K frame! While only an ounce heavier than S&W Model 10 at 35 oz, Henry Big Boy feels more substantial and acts much easier on the hands during recoil. Swapping the medium front sight blade for a short one regulated the point of impact to point blank inside a hundred yards. I could keep both .38s and .357s inside a steel silhouette at 100 quite easily. With a little concentration, still standing unsupported, I could hit a 12-inch gong at the same hundred yards with 125-grain .357 hollow points. Not bad for a 4-inch barrel and fixed sights. Fortunately, horizontal regulation of the sights was perfect even that far out. I noticed that the gun heated up quite quickly: after 24 shots, the cylinder was rather warm to the touch. Effective point shooting proved harder than aimed fire. I'm looking forward to the rimfire version of this revolver to practice more extensively in unsighted firing. Shooting even a hundred rounds in a row isn't at all tiring with Big Boy, but my ammunition stash isn't unlimited.

Since the front sight is easily swappable, I expect aftermarket high-visibility sights to become available. Although classic and even quaint in appearance, the Big Boy impressed me as an eminently viable defensive and hunting revolver. The removable grip and front sight provide opportunities for aftermarket parts, while its stock configuration matches the classic Henry carbine look and feel. The ability to land accurate hits past a hundred yards is a definite reflection of the quality of the design and the manufacturing process. The high degree of comfort without excessive weight makes this design a good option for the range and the outback alike.

John Marshall's book **101 Classic Firearms: A Chronological Foray into the Golden Years of Firearms Development**, is a compilation of the author's popular articles appearing in *The Blue Press* since 2007. **101 Classic Firearms** is sure to be a prized addition to the library of any serious firearms enthusiast. Published by Dillon Precision, and printed and bound in the USA, **101 Classic Firearms** is a high-quality full color 11.5" x 9" hardcover with 224 pages packed full of insights and history on some of the world's most important firearms. John Marshall is an accomplished photographer and freelance writer whose articles have appeared in *The Blue Press*, *Gun Digest*, *Guns & Ammo's Handguns*, and *American Gunsmith*. An expert on firearms, he is also a member of the Remington Society of America, the Smith & Wesson Collectors Association, the Smith & Wesson Historical Foundation and the American Gunsmithing Association.

DILLON: A MEMOIR

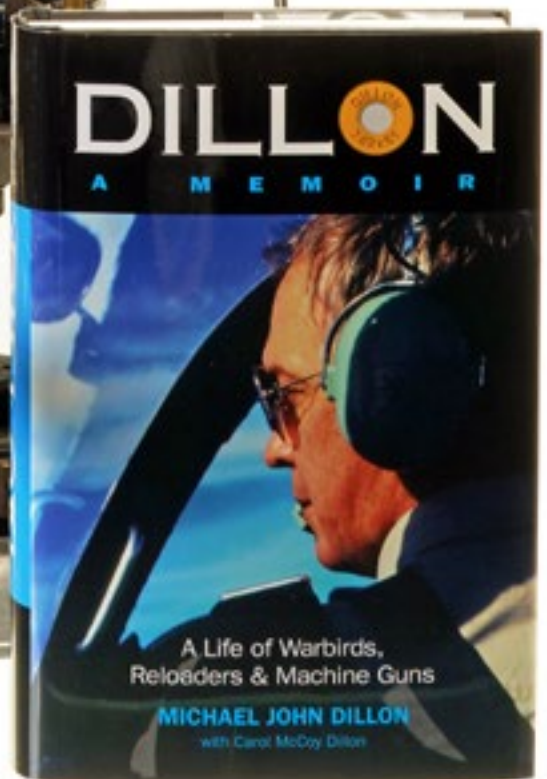

Read the story of Mike Dillon's journey from washing aircraft for a crop-dusting company, to airline pilot, to creator of The World's Finest Loading Equipment, and ultimately, to the man who revolutionized the M134 Mini-Gun!

Along the way his adventures included restoring a P40 Warhawk, fighting wildfires in WWII-era bombers converted to drop fire retardant and writing articles about flying warbirds for *Air Progress* magazine.

Not content to rest upon his laurels for creating the World's Finest Loading Equipment, Mike finished out his career by re-engineering the M134 Mini-Gun, helping to arm the US and its allies to fight the War on Terror across the globe.

Mike's memoir is a compelling read: the story of a man who believed he could do anything he set his mind to, and actually did it!

Pictured here are the original 1928 Navy Overstamp Thompson submachine gun Mike inherited from a friend who died in a tragic plane crash and a Star Machine Works reloader with Mike's "Super Star Conversion." These two items inspired Mike Dillon to found his own reloading equipment company. Read the book for details about how it happened.

Schuster Mfg. Inc. Adjustable M1/M1A Gas Plugs

All Schuster Mfg. Inc. adjustable gas plugs are made in the U.S.A. from hardened tool steel, Parkerized and feature a lifetime factory warranty. By adjusting the volume of gas, you change the speed of the op rod and the barrel harmonics. If you're working up your own handloads, a quarter of a turn WILL affect your group size. Includes instructions and the adjustment tool (Allen wrench).

Dillon Shooting Mat

Dillon's shooting mat is made of tough ballistic-weave nylon fabric, with a large skid-resistant elbow pad area. The "ground" side is moisture resistant and wipes clean easily. The padding is dense, closed-cell foam to provide both shooter comfort and a stable shooting base. The mat is equipped with a shoulder strap, a carry handle and two straps with snap-release buckles. Dimensions: 66" x 27.75"
