Presenting XL 750

Page 20
YOUR OWN AMMUNITION FACTORY...

XL 750

• Made in the USA
• RISK FREE 30-Day Trial!
• Lifetime “No-B.S.” Warranty
• Automatic Indexing
• Uses Standard 7/8” x 14 Dies
• Loading Rate: 500-800 Rounds Per Hour
• Loads 115 Calibers
• Comes With One Caliber Conversion
• 5-Station Interchangeable Toolhead
• Automatic Powder Measure
• Automatic Linear Priming System
• Spring-Loaded Priming Station Case Locator
• Integral Index Block Roller For Smoother Indexing
ATTENTION DILLON CUSTOMERS: Because of changes to California’s Proposition 65 that took effect on August 30, 2018, companies doing business in California are mandated to provide warnings on products that may expose Californians to any one or more of a list of approximately 900 chemicals, including Lead, which are “known to the State of California to cause cancer, birth defects or other reproductive harm.” The new regulation states that a warning must be “provided in the catalog in a manner that clearly associates it with the item being purchased.” Though we have no reason to believe our products could cause harm when used as intended, we now include the appropriate Proposition 65 warnings on some of our products to meet the California “safe harbor” requirements.

Dear Dillon Family and Staff, I picked up off the shelf my September 2018 copy of The Blue Press a week ago and re-read the excellent article by Duane Thomas titled “Why Handload,” which details his reasons for reloading. I want to add another reason of my own. Let’s call it “reason number seven,” since he provided the first six — if you include the issue of cost in the list.

Admittedly, I’m not a high-volume user and reloader of ammunition. Consequently, I probably will get out very few reasons to test Dillon’s great warranty. I’m lucky to get out in the field by my house on a Sunday afternoon to practice shooting for 30 minutes, given my chaotic life.

The complement to the shooting hobby is the time I can spend in front of my RL 550. I find that experience to be therapeutic and every bit as much fun as shooting. There is something at my core that loves to be productive. I set up my RL 550 in the choice of caliber, of which I find this machine extremely easy to switch over. I then sit down and crank out 100 rounds of say, .327 Federal Magnum.

At the end of the short reloading session, set before me is a bin of 100 perfect rounds of .327. Hiccups are rare, and the weights of the powder charges are so consistent it’s boring to discuss. Five minutes later, I have the machine switched back to 9mm with all its settings perfect.

A sense of satisfaction comes over me as I have manufactured my own ammunition. Well done, using well-designed, well-thought-out, high-quality Dillon equipment that works like proverbial clockwork.

Thank you, Dillon Family and Staff!
Best Regards,
David Demick – Berkshire, NY

You’re a man after my own heart, David. As much as the auto-indexing, auto-casefeeding, auto-bulletfeeding features enhance ammo-production capability, I think the simplicity of the 550 makes it one of the most attractive reloaders in the Dillon Family of Reloading Machines. It truly does complement the shooting hobby. Life can be stressful. Shooting – and reloading – is supposed to be relaxing.

Which Dillon is Right for YOU?

Square Deal B
Our automatic-indexing progressive reloader designed to load moderate quantities of common handgun calibers from .32 S&W Long to .45 Colt. It comes to you from the factory set up to load one caliber.

RL 550C
The World's most versatile reloader, capable of loading over 160 calibers. An automatic casefeeder is available for handgun calibers. Manual indexing and an optional magnesium powder bar allow you to load magnum rifle calibers.

XL 750
Truly the state of the art, our XL 750 features automatic indexing, an optional automatic casefeeder and a separate station for an optional powder-level sensor. Available in all popular pistol and rifle calibers.

Super 1050
Our highest production rate reloader includes a swager to remove the crimp from military primer pockets, and is capable of reloading all the common handgun calibers and several popular rifle calibers.

**Primer Flip Tray**
A heavy, high-quality tray large enough for the Federal primer package. P44-13606, $22.95 ea.
Let’s be clear; Palmetto State Armory (PSA) is becoming a household name. Secondly, they’ve tried building an AK in the past and it hasn’t gone over so well. So, will it be better this time?

The second generation of AKs made by Palmetto State Armory was met with mounting anticipation. However, it was a bit of disappointment and only had a brief run despite being a massive improvement from the Gen-1. The Gen-1s had cast bolt carriers and trunnions while the Gen 2 featured a forged bolt carrier and steel trunnion. In both versions meeting the 5000-round mark seemed to be a rare feat, but not impossible. Most seemed to have extractors break around 1300-2000 rounds. While they may last much longer and be an acceptable option for the American shooter, AK purists were disappointed.

The New:

In comes the PSAK47 GF3. Our model was the MOEKOV version in black, with the MagPul Zhukov-S® folding stock and standard MagPul furniture. It features a hammer forged front trunnion, bolt, and carrier. This is a major upgrade from both the Gen 1 and Gen 2 versions of the PSAK47.

The receiver is stamped steel and steadily holds the 1/9.5” nitride 4150 barrel. It also has a mount adapter attached to the left side of the receiver for quick optic rail attachment. The finish is adequate and out of the box, pristine. Other than the forged parts, there are no drastic changes from its predecessor.

First Impressions:

When it comes to fit and finish, it seems PSA’s quality control is spot on. Each bolt appears to be well tightened, and the rivets seem to be fitted right. The furniture is also the typical MagPul design. They attach well and don’t rattle.

The weight is surprising. It noticeably feels like less weight compared to a standard PSA AR chambered in 7.62x39 with a heavy barrel. The action is smooth and also lightweight with over and under receiver charging meaning the bolt is not binding up on the rails inside the receiver. The safety lever is 3 position and also operates smoothly. The reason for a 3-position safety is unknown, but might pair well with the Franklin Armory Binary Trigger in the future.

What stands out to me is the nitride barrel. Service life – even when shooting bi-metal bullets – is incredibly long. While purists might prefer chrome-lined barrels, the accuracy of the GF3 is improved with the superior barrel finish. It’s finished off with a pretty standard left-hand thread canted muzzle brake and typical sight.

Performance:

Typical performance was assessed with two ammunition brands and three magazine types. To
start, we employed TulAmmo 122-grain FMJ and moved to Wolf WPA 124 grain. We also had the pleasure of using mixed capacity Gen 3 PMAGs, a KCI 75-round drum, and mixed capacity XTech Tactical magazines. My goal was simple: make sure the rifle could operate several different types of magazines efficiently and with moderate accuracy while utilizing varied types of ammunition. I selected these magazines for several reasons:

- MagPul (magpul.com) is the most common polymer magazine and relatively inexpensive. We utilized those with metal reinforcement and without.
- XTech Tactical (xtechtactical.com) has a unique polymer magazine with a metal insert which reinforces the locking lugs and feed lips.
- The KCI Drum Magazine (kcimags.com) is a completely metal construction with mixed reports of performance. However, it has been my experience that most issues with drum magazines come from end-user errors.

Magazine functionality with PMAG 10-round and 30-round magazines was flawless. The magazines were held well by the GF3. PSA has inserted a tough mag release lever, which loosened up only after a lot of time, movement and oil. While this isn’t about the magazines, it seemed that MagPul was at the heart of the GS3’s design.

XTech Tactical sent me both their 30-round and 10-round magazines. They fit much tighter than PMAGs, which is subjectively positive. The GF3 readily accepted the locking lugs without any hesitation. A quick flip of the toggle and the magazines rocked forward and out.

KCI was a different story. The mag fit tightly with some side-to-side rocking when inserted. The loose fit is not a bad thing. What it does signify is it’s noisier than normal. Drum mags are noisy anyway with the rounds moving inside. Where KCI becomes slightly louder, is the steel magazine rattling against the steel receiver.
Loading up several magazines I headed to the range for a quick photo and actual shoot. Once there, I attached a Midwest Industries side attachment rail mount and EO Tech XPS2 Green. The Midwest Industries attached right to the side mount with minor adjustment and no clearance issues. While attached the Picatinny system is center lowered for free visual confirmation of rear and front site. While the XPS2 obscures visual confirmation of the irons, it’s a great design without ever needing to remove the rail system until fieldstripping.

While the goal of this test was not to determine the accuracy of the new GF3, I was quite surprised. Forgoing the irons, a quick dial in on the XPS2 proved that the accuracy was well within industry standards at 100 yards. No functionality hiccups and movement was smooth and predictable.

Moving forward it was time to do some quick, rapid-fire bursts. The stock was folded in, KCI magazine was attached, and a strong grip was applied. Three 20-round bursts were applied in rapid succession. As the barrel heated up the oil began to smoke off. Petroleum, plastic and gunpowder filled my nostrils. No issues, no FTE and no FTF. Time to cool down.

Once the barrel returned to ambient temp, the remaining 15 rounds in the drum were fired to test for accuracy at 100 yards with no magnification while sitting at a bench. Using both Tul/Ammo and Wolf I was able to hit 2MOA at 100 yards while free holding. It’s clear the gun can outshoot me.

Conclusion:

PSA has done a great job on the new GF3. It’s a minor upgrade from the Gen-2 and a MAJOR upgrade from the Gen-1. Some of these many European variants don’t include – like the nitride barrel – while still maintaining the grizzled ‘com-bloc’ lines. What sets this firearm apart from the herd is the American construction mixed with pricing. With the previous experiences of many users the skepticism surrounding the GF3 is warranted. While my test was not a high-round test, we did hit over 1000 rounds without an issue. Teardown and cleaning was also straightforward. As an added bonus, the Midwest Industries mount and EO Tech XPS2 Green also performed flawlessly.

When this article was written, the GF3 cost between $550-$699 USD depending on the retailer. This is a significant price reduction from most foreign alternatives. Initial performance and magazine options are on par with foreign alternatives. This is an excellent, new option for the American and Canadian consumer. Personally, I am interested in witnessing how PSA does with their new GF3 in the long run.

PSA K47 GF3: The Gen-3 AK47 looks similar to the previous two generations produced by Palmetto State Armory. However, under the good it contains a few well-placed upgrades to match the stock options available. Inset Left: The PSAK47 GF3 had little to no issue with any magazines the author used. This means any magazine a user wishes can be utilized by this new American AK. Inset Right: The author tested several MagPul magazines, KCI 75-round drum, and two types of XTech Tactical magazines. All these magazines were employed with no issues.
INTRODUCING NEW IMR ENDURON 8133.

It’s the slow-burning, copper-crushing magnum powder shooters have been waiting for. Engineered for Extreme Temperature Stability, Ideal Load Density and elevated confidence and success that comes from reloading with legendary IMR powders.

**Strong Mount** increases your machine’s “footprint” to over 10”, spreading the load over the whole bench instead of stressing the leading edge. For XL 650 owners with limited overhead clearance, the XL 650-only mount raises the machine 6” above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

The **Low Powder Sensor** provides an audible and visual reminder when it’s time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

**Dillon’s “Belted Magnum” Powder System** features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

**P44-97126 $158.95**

**The Powdercheck System** (available for XL 650/750 and Super 1050 reloading machines) sounds an alarm if the powder charge in a round is out of limits either high or low.

**P44-21044, $71.95 each**

**Three or more, $64.95 ea.**

**An Aluminum Roller Handle** gives your reloader an entirely new “feel,” reduces operator fatigue, and makes primer seating easier.

**P44-17950 $48.95**

**Dillon’s 1” Bench Wrench** fits our 1” Die Lock Rings which give you more space on the toolhead.

**P44-10842, $8.95 each**

**Two or more, $8.10 ea.**

**Our Machine Maintenance Kits** come with everything you need to keep your Dillon loader cleaned and lubricated up to factory specifications. Available in combination with a spare parts kit for your machine.

**Our Machine Maintenance Kits** come with everything you need to keep your Dillon loader cleaned and lubricated up to factory specifications. Available in combination with a spare parts kit for your machine.
Case Preparation Equipment

Dillon's CV-2001 Vibratory Case Cleaner is one of the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour. Not only is our capacity greater than most, but our motor is also larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no “hobby” machine! The bowl and base are constructed of 7/32” thick injection molded high-strength polypropylene which is impact and abrasion resistant.

**Case/Media Separators**

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media. We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners. The solution was an injection molded reversible part. Simple, and it works great. Our device is large, 10” x 14”, and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18” x 22”. The tub keeps the mess off the floor and bench. It’s fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

**Limited Work Space?**

Dillon’s introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit. Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

**Vibratory Case Cleaners**

**Case/Media Separators**

**Rapid Polish 290** is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You’ll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won’t weaken brass cases!

Dillon’s D.C.L. non-aerosol case lube is easy to use. Simply lay your cases out, spray lightly with one or two passes and you’ve done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge cases and you’re ready to load. Try a bottle. You’ll never use a grease pad again.

**Don’t Forget Polishing Media!**

Crushed walnut hull polishing media quickly cleans even the dirtiest of cases and is the best solution for badly tarnished, range-pick-up brass. 15-pound bag

<table>

</thead>
</table>
Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won’t be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What’s more, it’s inexpensive. The Super Swage 600 comes with large and small swage rods.

Rapid Trim 1500 Case Trimmer

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (Vacuum cleaner and hose not included.) The RT 1500 is equipped with a quick-disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer P44-62164 is $337.95. (Available only in 110 volt 60 hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, P44-13141, are $20.95 each. Upper lock rings, P44-13559, are $5.99 each.

Blue Press 21
1. First gun you ever fired?
Eric: Ruger .22 carbine, can’t remember the model.
Nils: Marlin .22 rifle.

2. What’s your favorite gun?
Eric: CZ Shadow 2 Orange or CZ P-10 C or, I love to shoot optic guns.
Nils: My favorite gun is my custom .38 Super Comp open gun built by Matt McLearn.

3. Do you have any rituals before you shoot?
Eric: Not really, besides checking if all my mags are full several times.

4. What’s the one thing you wish you could change about the gun industry?
Eric: The image of gun owners and shooting competition to the general public.
Nils: Public perception. The firearms industry as a whole is full of genuinely good people, and 100-percent of the gun enthusiasts I know either care about competition shooting or having the ability to defend their loved ones.

5. Most useless thing you own?
Eric: Three Guinea pigs.
Nils: A single-stage reloader.

6. Favorite food?
Eric: Seafood.
Nils: A well-seared medium-rare steak.

7. Favorite place on Earth?
Eric: Several: Home; Toscana; Costa Rica; and Boracay, Philippines.
Nils: I haven’t traveled much, but right now it’s a toss-up between Arizona and Utah.

8. Most annoying thing about you?
Eric: I work too much and don’t spend enough time with family.
Nils: I’m disorganized and my only hobby is shooting.

9. Craziest thing you’ve ever done?
Eric: I don’t do crazy stuff. My personal
over-control of things does not allow me to do crazy stuff. LOL! Basically, if too risky, I am scared.
Nils: Tell someone I was going to become a National Champion.

10. Dream job?
Eric: Being retired, if that counts as a job.
Nils: What I do now. I’m a professional shooter and product developer for a handgun company named Canik.

11. Who has inspired you the most?
Eric: I can’t say one person inspired me mostly. The family heritage, from my family’s side, but also from my wife’s side. Each person in the family has influenced me at some point.
Nils: Rob Leatham. The first shooting video I ever saw was “Shooter Ready” starring Rob. I thought it was the coolest thing ever.

12. Who would play you in a movie?
Eric: Tom Cruise, because I like Ethan Hunt in “Mission Impossible,” but that doesn’t match with the crazy part inside me.
Nils: Matt Smith from “Doctor Who.”

13. If you could have a conversation with anyone from the past, who would it be?
Eric: My grandmother, who passed away 10 years ago.
Nils: John Moses Browning.

14. Who’s in your regular crew?
Eric: My wife…and all my team in the store. Alice, Seb, Jean Michel. Without all of them, I couldn’t do what I do today.

Nils: John McLain out of Vegas and Sam Travis from Arizona.

15. Words to live by?
Eric: Being free of any obligations is the most valuable thing people can own.
Nils: Focus on your dreams and don’t listen to all the negative people along the way. Talent only gets you so far. Hard work gets you where you want to go.
**Dillon Leather by Mitch Rosen!**

**5JR-DL**  
A full-length belt slide that offers all-day comfort and superior concealment for an outside-the-pants belt holster.

- **Best-Quality Belt-DL**  
  Simply the best GUN BELT you have ever owned. Full, double-thickness leather with solid brass buckle and hardware.

- **Sport EXP-DL**  
  The Sport™ holster is a straight-drop design featuring a tunnel loop and rear stabilizing slot. This is an all-around holster suited to field use, “practical” competition, and some prefer it for daily carry. Slim profile, straight drop, close to the body.

- **El Raton-DL**  
  This pocket holster secures and properly positions a J-Frame revolver in your pocket. Will not come out when you draw. 2” J-Frame S&W Revolver

- **Double Duty TDU®**  
  The Double Duty TDU® belt is metal-detector friendly and offers two color options. Both the Trainer and Operator belts feature 6,000-pound-test buckles and heavy, reinforced stitching, therefore can be quickly converted into secure tie downs, secondary carry straps or emergency harnesses. All 5.11 tactical belts are made of strong nylon webbing and provide a stable support for carrying firearms and accessories. According to 5.11 Tactical, belt sizes run small, so they recommend you order one size up for the best fit.

- **Plan B® Very-Bad-Day Planner Holster**

- **“Plan B” Holster**  
  Dillon’s “Plan B” Very-Bad-Day Planner Holster holds a handgun and a spare magazine or pepper spray, yet it fits in with business clothing and won’t draw undue attention. It looks like a typical day planner, but inside there’s a holster that’s adaptable for either right- or left-hand draw. It fits most .380, 9mm, .40 and .45 caliber autos, including: Beretta, Colt, GLOCK, HK, Kahr, Kel-Tec, Ruger, Taurus, SIG, and Smith & Wesson. Will also hold small-frame revolvers with two- to four-inch barrels.

This holster/mag pouch combination was designed for the Single Action Shooting Society’s “Wild Bunch” category, incorporating a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The mag pouch spaces the magazines so when you grab one mag, the second isn’t in your way; above the belt line so the belt doesn’t interfere with the draw; and at the max depth required by the sport – and no more – so you’ll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

- 1911 Holster P44-19947 $139.95
- Mag Pouch P44-19946 44.95

**SAFARILAND Custom Fit, ALS Holsters**

**Safariland Custom Fit 567 Holsters**

The Model 567 Custom Fit holster is one of the lightest, thinnest, best fitting concealment holsters available. True to its name, it adjusts to a wide variety of popular handguns, giving each a “custom fit” in this holster.

The Pachmayr Pac-Mag™ Holds up to 30 pounds and the three-magnet design gives the Pac-Mag more strength than any other gun magnet on the market. Secure almost any gun – pistol, rifle or shotgun – practically anywhere!

Pachmayr Pac-Mag Gun Concealment Magnet

ODIN Ready Bag

ODIN Works introduces the new ODIN Ready Bag™ (ORB) featuring multiple pockets and pouches for mags, small gear, a clip for your keys, a water bladder pouch, and soft dividers inside to take down and pack your AR-15 while keeping parts safe and separated. For those builds with longer barrels, there is an extendable pouch at the top to ensure that any rifle will fit and be carried with ease. Whether you’re going to the range, out on a hunting trip, or just hiking through the woods, packing your gear has never been easier!

- Quick-release compression straps
- Four D-ring attachment points
- Key clip
- Loop and hook fasteners
- MOLLE fasteners
- Reinforced handles
- Two water-bottle pockets
- Ambidextrous shoulder strap
- Locking buckle
- Dividing panels that separate an AR upper and lower
- Water-bladder pouch and hole for hose
- Pocket extender: Can remain in bag as a pocket or extend up through the zipper to fit longer barrels
- Available in black or coyote brown
- Dimensions: 28” x 7” x 6”

The SnapSafe® Modular Vaults LOCKBOX is a pry-resistant 16 gauge steel container that provides secure storage for handguns and other valuables. Meets TSA airline firearm guidelines.

Dimensions: 9.5” x 6.5” x 1.75”.

P43-01044 $19.95

**HYSKORE Six-Gun Modular Pistol Rack**

The HYSKORE Six Gun Modular Pistol Rack is constructed from closed-cell, non-reactive foam that will not absorb moisture or react with lubricants or solvents. It has a soft, suede-like finish, but is rigid enough to offer firm support. The rest will hold six pistols with either single-stack or double-stack magazines, and can be disassembled and reconfigured to hold guns with wider or narrower grips.

The modular feature of the rest also means that two or more rests can be connected together and reconfigured not only to give each gun its own “special home,” but also to take maximum advantage of all available space in your safe or vault. This is easy to do using 3/16” threaded rod, washers, and hex nuts available from any home-improvement store. The rack measures 11-1/4” wide x 7-1/2” deep x 6” high.

Blue Press 31
By Peter Caroline

I do not lay claim to being a hunter. I have shot many prairie dogs, but that’s essentially target shooting with exploding targets. On two occasions, I engaged in American bison culls on private lands. And, some years ago, I executed three feral hogs with frontal headshots at conversational distances. But that’s not real hunting, which involves genuine skill and perseverance, neither of which I possess.

Several months ago, I mentioned to my friend Bill Berlat that I’d like to enjoy some real pork, the kind that was available before pork became “The Other White Meat.” Real pork was tender and juicy and, yes, fatty… that’s where the taste came from. We agreed that such a treat was indeed available in the wild, from feral hogs. A 200-250 lb. young sow would be ideal.

Some weeks later, Bill came up with a likely venue, the Blue Rooster Hunting Ranch in Woodruff, Arizona, which featured a large spread of open range and a mile and a half of the Little Colorado River canyon system. In addition to feral hogs, they offered big horn sheep, exotic rams and American bison. I called them up and described what I was looking for. The nice lady on the phone was quite confident they could supply the requested critter, so we set a date.

On the morning of May 15, Bill and I arrived at the ranch. He came along solely as an advisor, having hunted all over the world, and he already had a freezer full of meat. I had brought along a Skinner “Bush Pilot” Model 1892 takedown .44 Magnum carbine, which Bill had advised me would be equal to the task, along with a box of Garrett .44 Magnum 250-grain Hammerheads. I was carrying a Ruger SR1911 10mm pistol as a backup, loaded with Buffalo Bore 200-grain FMJ ammo. Bill had also recommended that I should bring along my Ralph Bone 8” pigsticker, as a muy macho method of dispatching said hog. I declined in the interests of safety and sanity, and left the knife in my car.

We met our guide, an amiable young gentleman, and climbed aboard a 4-seater ATV. From the road, the ranch seemed to be located on a vast grassy plain, but as we rode along, I could see that we were approaching a canyon. As we descended a steep dirt path, I noticed an ancient petroglyph on the canyon wall, indicating previous native American habitation. I got out of the ATV and proceeded to a designated spot to wait until an appropriate target showed itself. There was, indeed, an impressive amount of porcine traffic. The first passerby was a large black boar. It was not the pig I was looking for. He gave me a contemptuous glance and ambled off into the puckerbrush.

Several minutes later, the right sow did show up. I fired, and our guide pronounced it a good shot. The pig, however, had other ideas and decided to disappear into some thick brush and trees. I followed, and after about an hour of shlepping uphill and downhill, through forest and thicket, I finally achieved a killing shot down by a stream. Now, several months earlier, I had suffered a leg injury and had undergone a month of intensive PT, without which I probably would not have been able to undertake this hunt. Anyway, our guide drove back to the ranch, picked up a trailer for the ATV and returned to load up the sow.

As it turned out, the critter weighed a bit over 200 lbs. Perfect. When it was skinned and gutted, we could find no expended bullets, even though several bones were penetrated. It would appear that, at least in this case, the Garrett Hammerheads were a bit of overkill… they went through like an icepick!

After icing and wrapping my prize in a tarp and

Hog Heaven
loading it in the bed of my Honda Ridgeline, I took care of the financial arrangements. I was really impressed with our guide’s professionalism, patience and good nature. Guiding a complete amateur (and an old, out of shape one, at that) is no easy task. Much appreciated!

Bill and I drove back to Lakeside, and dropped my prize off at the game butcher, White Mountain Meat Packing. The bed and tailgate of my truck looked like a crime scene. It’ll wash off. Two mornings later, I picked up a large cooler load of frozen and neatly labeled porcine components. So far, I’ve sampled only the breakfast sausage, which is lovely indeed. Life is good!

Sizing/Depriming Die (Pistol)

Our sizing/depriming dies feature a “floating decap assembly” with a snap spring that throws the spent primer off the pin and eliminates the primer “draw back” that often occurs when decapping military brass. The primary feature of Dillon’s size die design is the long, tapered carbide ring with a radiused opening. That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother— but that’s still only a part of the story.

**Bullet Seating Die (Pistol)**

Our quick-disassembly seat die allows the user to disassemble and clean the seating die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We’ve incorporated a “flip-flop” seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem. Dillon’s double-ended design makes it simple to remove a jam, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time.

**Crimp Die (Pistol)**

We’ve made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you’ll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Now, you’re all set from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

**Dillon Pistol Dies (Three-Die Sets)**

**Spare Decapping Pins**

Package of 10 P44-21528 $6.75

Sizing/Depriming Die (Rifle)

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for “squeak-free,” effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

**Bullet Seating Die (Rifle)**

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

**Taper Crimp Die (Rifle)**

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today’s marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

**Dillon Rifle Dies (Three-Die Sets)**

- .223 Remington P44-10839 $80.95
- .308 Winchester P44-15574 80.95
- .30-06 Springfield P44-10840 80.95

Note: Individual Dillon size, seat and crimp dies are available. Call or visit our website to order.
Dillon’s Range Bag is designed to hold the Border Shift Ammo Bag (sold separately below), as well as a Dillon Large Utility Box (see Page 45). The Main Compartment is 12.5” long x 7” wide x 10” high, the End Pockets are 8.5” tall x 6.5” wide x 2” deep and the Front Pocket is 9” tall x 6” wide x 2” deep.

Range Bag, Black
P44-19366 $89.95
Pistol Pouch, Black
P44-17027 10.95

“Border Shift” Ammo Bag

Dillon’s two-compartment ammo bag is constructed with a flexible inner liner that will allow the entire volume to be accessible from either zippered opening. You’ll never again mix fired brass with loaded rounds!

Border Shift Ammo Bag, Black
P44-13755 $25.95
I.D. Card Holder (Inset, Left)
P44-14575 2.95

Shooting Mat

Dillon’s shooting mat is made of tough ballistic-weave nylon fabric, with a large skid-resistant elbow pad area. The “ground” side is moisture resistant and wipes clean easily. The padding is dense, closed-cell foam to provide both shooter comfort and a stable shooting base. The mat is equipped with a shoulder strap, a carry handle and two straps with snap-release buckles.

Dimensions: 66” x 27.75”
P44-18146 $65.00

Dillon Precision Logo PVC Key Ring

P44-66032 $4.95 ea.

Mr. Bulletfeeder has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy – a world leader in practical-shooting-related product manufacturing and distribution – at the helm. The design allows the bullet collator to be mounted onto the casefeeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

Blue Press 41
The German Sauer 38H pistol was one relic of World War II that I had only vaguely heard about for quite a number of years, so, curious, I began investigating it more thoroughly. I learned enough about it to become fascinated, and sought to find one to examine. Just recently I came across a very nice example of the gun to see what they were all about.

Reactions of many upon seeing the pistol are amusing. Here's a representative one: “So,” a friend said. “Whatcha got there, a Walther PPK?”

“No.” I replied.

“Is it a Mauser HSc??”

“Nope.” He looked at it with more interest.

“Aha!” he exclaimed. “It’s a Sauer 38H! I’ve never actually seen one!”

Most folks are like my friend – either not knowing or only vaguely knowing about this pistol that was prolifically used by the German military and police during World War II. At the end of the European part of the war, production ground to a halt, with the Sauer plant finding itself in the partitioned East German State. Unlike the PPK and the HSc, the 38H was never resurrected into further production. That was unfortunate, because it was quite technologically advanced, perhaps even more so than its contemporary Teutonic “pocket pistol” competitors. Still, a number of its then-innovative features were adopted in the postwar years by other pistols in varying ways.

The gun was a product of J.P. Sauer & Sohn, founded in 1751, of Suhl, Germany. The “38H” name referred to its 1938 year of introduction, and the fact that although it looked like a hammerless design, it actually had an internal hammer, or hahn, in German. Because it had no external hammer, a mechanism was needed that could both cock the internal hammer and lower it safely. Therefore, a cocker/de-cocker lever was incorporated on the left side of the gun, usually operated by the thumb of a right-hander. If the gun's hammer was cocked and the trigger back for single-action fire, pressing the lever down de-cocked the hammer safely. This also made the trigger go forward to the double-action mode. Amazingly and uniquely, if the hammer was down and the trigger was forward, pressing the same lever down all the way would cock the hammer and draw the trigger back! This general arrangement was passed on to many of the SIG-Sauer pistols of today; a similar side lever will de-cock their external hammers in a safe manner. Also, the Heckler & Koch P9S pistol emulated the 38H by using a side lever that could both cock and de-cock its internal hammer.

Another feature, unique in those days, was that the breechblock was a separate unit from the bulk of the slide, using a higher grade of steel, which was kept “in the white.” It was pinned into the rear of the slide. This arrangement is mimicked today by the highly regarded SIG Sauer P220/226 – the slide has a similar pinned-in breechblock. The 38H’s 8-round .32 ACP / 7.65mm magazine drops freely with a push of a button located to the rear of the trigger. When the magazine is removed, the trigger is inactivated, a safety feature that was relatively uncommon in those days. That magazine safety in no way interfered with the trigger pull, either double action or single action. With the internal hammer down, the first shot could be fired double action, and successive rounds were then triggered in the single-action mode. Repeat strikes on a tough primer were possible. When the slide-mounted safety lever was down, exposing a red dot, the gun could be fired in either mode. When the lever was up, it disconnected the trigger when the gun was in single-action mode. When the piece was set for double-action mode, the engaged safety blocked the trigger and also locked the slide from moving. A pin at the rear of the slide was a loaded-chamber indicator, protruding slightly where it was easily seen or felt if the chamber had a round in it. The trigger had a round hole through it, which was concealed when the hammer was cocked for single-action fire, making the trigger and hammer’s status easily discernible.

Takedown of the pistol for cleaning purposes is very easy. After removing the magazine and clearing the chamber, notice that there is an “eared” block in front of the trigger that can be pulled straight down. Then the slide can be brought all the way back, the rear end lifted, and it can be slid off the fixed and pinned barrel in a forward direction. The recoil spring is wrapped around the barrel, and can be easily removed. Taking off the grips will expose the action parts. By the way, the grips were made of Bakelite plastic – an early synthetic that was new in those days. It now has a habit of decomposing, cracking or crumbling with age. Finding one of these pistols with the grips intact is unusual now, because they are so fragile. The left grip is marked...
The WWII German Sauer 38H Pistol

with the intertwined “S u S” Sauer logo, standing for Sauer und Sohn (Sauer and Son). The magazines were usually marked “CAL. 7,65”, and sometimes also with the Sauer logo on the base plate.

Although the 38H was devised in 1938, full production did not start until 1939. It continued to be made through the war years (1939 – 1945) until the Russians overran the plant in Suhl in April 1945. It then faded into history. The machinery that was used to make the pistol was taken apart and moved East by the Soviets. Also removed from the plant was its manager, a Sauer descendant. He was never heard from again.

It’s estimated that roughly 250,000 of the 38H were made in total, with available production records being ruefully incomplete. A 6-digit serial number can be found on either side of the pistol, on the frame just under the rear of the slide. The last 3 digits of the serial number should be stamped inside the slide and at the rear of the breech-block. All numbers should match if original. Military serial numbers reportedly run from 271456 to 506527.

Markings vary from full identification stamps to none except for the caliber marking, which was uniformly stamped on the left of the slide as “CAL. 7,65”. The Sauer logo remained on the left grip throughout all production. Almost all of these pistols were chambered for .32 ACP, although it’s believed that a few were made in .380 ACP and .22 LR. Quality of fit and finish diminished over the years of the war, with tooling marks and weak bluing becoming common as time wore on. Due to heavy demand for faster production, towards the end of the war the safety lever and/or the cocker/de-cocker lever were omitted. Fit and finish became spotty, and quite a number of examples from the final year do not have matching parts numbers or even a caliber marking on the slide. Still, these “last ditch guns” remained serviceable and deadly. The pistol illustrated here is believed to have been made mid-war, probably in 1943. It carries German “eagle over N” proof marks on the right side of the slide and frame. The military waffenamt acceptance stamp, which for armed services pistols was an “eagle over 37,” is stamped on the left side of the trigger guard. It’s known, although no specific allocation records now exist, that 38H pistols were issued to the Wehrmacht, the Luftwaffe, the Polizei and the Fallschirmjagers (Army, Air Force, Police and Paratroopers). Some also went to the Nazi party. It’s believed that few or none went to the Kriegsmarine (Navy). Police guns usually had a special waffenamt stamp of “eagle over C or F” on the trigger guard. These are considered more desirable by collectors. A number of pistols were produced for the commercial market and these will not have waffenamt stamps.

The overall length of the pistol was 6.73 inches, with the barrel measuring 3.3 inches. It weighed 1 pound and nine ounces. A very few were made experimentally with alloy frames. The action was straight blowback; the slide movement was resisted only by the strength of the recoil spring, the resistance of the internal hammer and the weight of the slide. The front sight was fixed, while the rear sight could be drifted laterally for proper sighting. The top of the slide had a longitudinal strip between the sights that was serrated to prevent glare. The slide did not remain open after the last shot, as there was no slide stop device. Some guns with deluxe features such as engraving, gold inlay, and ivory grips were presented to various Nazi officials. A presentation 38H that once belonged to Sepp Dietrich (1892-1966), former chauffeur and bodyguard to Adolf Hitler and later an SS panzer general, sold at auction for over $43,000 in 2004!

This “ghost gun” of World War II has come alive for me, as I’m pleased to have finally discovered one in decent shape. It was ground breaking during its time in history, and its legacy lives on with many similar features in the modern SIG Sauer pistols. The surviving 38H pistols have become great collectibles now. Values are dependent on the quality of the finish, matching serialized parts, presence or absence of markings, safety levers, cocker/de-cocker levers and original intact Bakelite plastic grips.

Dimensions: 9.25”L x 3.125”BW x 3.125”TW x 2.5”H
LIFETIME WARRANTY. MADE IN THE USA
P44-12296 $8.99

Dillon AkroBins

AkroBins are ideal for reloaders who load several calibers, bullet weights, bullet shapes, etc. We’ve been including these bins with our machines for years, and now we’re stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal “B” cartridge bins) are 4-3/8" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550/XL 650/750 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The Double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They’re virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang ’em, stack ’em, rack ’em and fill ’em – you just can’t beat ’em! Buy several and get your “stuff” together.

Blue Press 45
By Duane Thomas

If you find yourself sucked into the wonderful world of being a serious shooter, in short order you start seeing the advantages to joining a gun range. In this article I’ll give you my advice on how to choose which range to join, based on coming up on 35 years of experience at this whole “gun” thing.

Before we get started, let me say that what’s in this article is just my biases, based on my experiences, and I’m under no illusion it’s anything else. Also, I’m going to talk in this article a fair bit about Wade’s Eastside Guns in Bellevue, Washington (wadesguns.com). I know that for those of you living in, say, Wisconsin, it couldn’t possibly become a member there. I don’t want this article to sound like a Wade’s infomercial – it’s not – I’m just using it as an example of a gun range that does things right, so you can know what to look for, yourself.

SAVINGS

The most obvious reason to join a gun range is to save money. Paying a range fee every time you go shoot, if you do that frequently, adds up fast. Once you’re a range member, you can shoot there for free, as much as you want, for as long as your membership lasts.

In my neck of the woods, western Washington State, the going rate for an annual membership at a gun range is $350. I’ve been told by friends living on the East Coast it’s the same there, so I assume that’s pretty standard. If you’re willing to go into the boonies to some small range in the middle of nowhere, you can get that down to about a third of that.

Piece of advice #1: Don’t cheap out. $125 a year instead of $350 a year sounds like a great deal until you realize you get what you pay for. If the deal sounds too good to be true, it probably is.

I’m a serious competition shooter who makes his living as a gunwriter, so I shoot a fair amount. My annual ammo expenditure generally hovers somewhere around 15,000 rounds. (Thank you, Dillon Precision Square Deal, I couldn’t do it without you.) By the standards of a serious shooter, that’s not a huge round count, by the way, maybe slightly above average. Given my druthers, I go to the range around twice a week, partly because it’s my job, partly because I just enjoy shooting. And I shoot every match I can.

At Wade’s, to shoot there all day costs $25. To compete in an Action Shooting International match there (more about which later) costs $20. But let’s say I only went to the range once every two weeks, and I only shot half-a-dozen ASI matches (asi-usa.org) at Wade’s per year. In other words, let’s say I’m not me; I’m some hypothetical shooter who’s pretty into it but not obsessive. Let’s do the math. Okay, carry the one… That’s $770 a year. If I were me, it would probably be about four times that. It doesn’t take long to figure out the $350 annual membership fee is a good deal.

LIFE MEMBERSHIP?

If you’re really serious about this whole “gun range membership” thing, consider a Life membership. I
know, that may sound like something totally out of your financial league. Not necessarily. Wade’s Life membership costs $750. If you become an Annual member for $350, and upgrade to Life within 90 days of your Annual membership taking effect, all you have to do is pay them the $400 balance. Essentially, you can break a Life membership into multiple payments, you’ve got three months to pay it off, then you’re a member of that range, and can shoot there for free, literally for the rest of your life. Or until the range goes out of business, of course, which in this case doesn’t show any signs of being soon. When you find a deal like that, jump on it with both feet.

**Piece of advice #2:** Gun range membership saves money, and Life membership can be surprisingly affordable. Ask not just about an Annual membership but also about how much a Life membership costs. The answer might surprise and delight you. Don’t be afraid to use the Internet, or make some phone calls; do some comparison-shopping.

**OUTDOOR OR INDOOR RANGE?**

Some of the best gun clubs in America are outdoor ranges. Rio Salado, Norco, and PASA come to mind. In my area of western Washington State, the Renton Fish & Game Club and Paul Bunyan are both notably good. Having said that, honestly, over time I’ve found myself gravitating more and more toward indoor instead of outdoor gun ranges.

Many gun clubs have outdoor ranges, located in remote rural areas. Outdoor ranges get frickin’ cold in wintertime. And all INDOOR ranges are not created equal. “Indoor range” might mean a large, well-built, well-heated, well-maintained, modern facility, or it might be a small, concrete block building that was built out in the boonies 60 years ago.

Rural-located indoor ranges tend to have been built on the cheap; they’re very poorly insulated, with grossly inadequate heating systems. Folks, I have shot on little indoor ranges over the years so thinly insulated, with heating systems so poor, in the dead of winter it was colder inside that bare concrete block building than outside – I say that having measured both temperatures with the thermometer I carry in my range bag, as part of my shooting gear, to measure ambient temp when using a chronograph – because the concrete floor just absorbed and radiated the cold, the heating system was essentially useless, and that was before I turned on the fans for ventilation and added wind chill into the equation. No exaggeration, I have almost gone hypothermic, shooting on poorly insulated and heated indoor ranges.

This is a safety issue. Hands get cold and clumsy. Mental acuity suffers. “Fumble-prone” and “gun” are not two concepts that go well together. If possible, step out onto that shooting range in winter. Is it warm, well heated, pleasant? Or do you feel like you just stepped into an icebox? If it’s summer, is it sweat-inducingly hot inside? If a building has no cooling system, the heating system probably isn’t the greatest either. Make your choice of whether to give this place your hard-earned money accordingly.

**Piece of advice #3:** If year-round shooting capability is important to you, go for a well-heated indoor range. If at all possible, stay away from outdoor ranges, and stay away from poorly constructed, essentially unheated rural indoor ranges, both of which are very seasonal propositions, unless you’re just totally hardcore and immune to cold.

**CITY OR COUNTRY?**

I assume the vast majority of you reading this are political conservatives. As political conservatives, we can have a tendency to distrust people in large cities – probably nasty liberals who hate guns and vote Democrat – and glamorize small town life, “the heartland of America.” At the risk of coming across as a horrible elitist, here is my next piece of advice: I advise choosing a gun range located in or near the largest urban center within easy driving distance. Let’s discuss why.

Okay, here I’m going to use Wade’s Indoor Range as my example, and you can apply the info I give you to your own situation. Wade’s is located in Bellevue, Washington. For those of you not familiar with it, Bellevue is a suburb of Seattle, and is called by locals “the Beverly Hills of Seattle.” If you live in Seattle, and you have money, you probably live in Bellevue. And you probably have some sort of tech job: Bellevue is located right next to Redmond, which is the home base for Microsoft. You are well educated, you have a good job, you make good money, and when you frequent a business, you expect service. You’re used to being treated well. You expect a large, gorgeous, well-equipped, well-maintained, clean facility, staffed by personable, knowledgeable, friendly employees who can answer your questions, and genuinely like helping people.

**Piece of advice #4:** You should probably avoid little local gun clubs. Again, I could be wrong, your little local gun club may be awesome. But I would look in and around a major urban center, in the most affluent area your bank account can afford. You really do get what you pay for, and money spent on membership at a first-class facility will pay for itself in quality of service received many times over.

**PISTOL-RATED OR RIFLE-RATED?**

Some of the small rural gun clubs have an indoor range with a backstop that’s only pistol-rated. (Here we go back to the “built on the cheap” concept.) Therefore they don’t allow centerfire rifle cartridges to be fired on that range, it would just beat up the backstop too much. They are PARANOID someone is going to fire a rifle on that range. Okay, I get that.
Now, to how many of us is the ability to fire a rifle on the range important? Given that the AR-15 has been the best-selling firearm in America every year for the past decade, and that a huge number of people look for a place to sight-in their hunting rifle every year, I would say it's important to a lot of us.

**Piece of advice #5:** Stay away from pistol-rated ranges, go for a range with a true, rifle-rated backstop.

**PERSONNEL**

A lot of people working in gun shops, and at shooting ranges, have a law enforcement or military background. Okay, what I am about to say comes from a person who spent 10 years on active duty in the United States Army, the first three as an Airborne paratrooper, and who's known police officers I consider some of my personal heroes. Obviously, I like military people, and I like cops. Having said that – and meaning it – let's not kid ourselves, the fact a person is wearing, or used to wear, a particular uniform does not automatically make them a gun expert. This is a fact lost on a certain percentage of people wearing, or having worn, uniforms.

Most new military members, and most police cadets, report for training having never shot any sort of firearm before in their life. Most soldiers and police officers have never fired any gun other than their issue weapon. They get trained to a level that could in no way be described as expert, then most of them never fire that gun again unless they're forced to during re-qualification, which in the Army when I was in – it may have changed now but I doubt it – meant 40 rounds out of a rifle once a year if you were enlisted, or, if you were an officer, 30 rounds out of a pistol. In most police departments, it's 50 rounds out of a pistol once a year. In really high-speed departments, it might be 50 rounds twice a year. Rarely is it more.

You do not want the person answering your questions at the shooting range to be a guy whose entire gun résumé reads, “Used to wear a uniform.” Here is one place where I simply must again mention Wade's. To work at Wade's Indoor Range, you must have passed the qualification course created by the Washington State Criminal Justice Training Commission to be not just a SWAT team member, but also a SWAT team INSTRUCTOR. This is not an easy test; the best I've ever done on it is 497 out of a possible 500 points.

You show me someone whose only qualification to be answering questions on guns and shooting techniques is “used to wear a uniform,” I can tell you, with absolutely no worries of being wrong, you're going to be hearing a lot of uninform ed dogma masquerading as knowledge. You show me someone like Joe Porras, Wade's range manager and a retired 20-plus-year police veteran who can pass the SWAT instructor qual on demand, or Adam Simon, Sandbox vet and one of the very few people working at Wade's to ever have passed the SWAT qual with a perfect 500-points score, we are talking a completely different sort of beast. These are guys who are gun people; they know firearms, they know how to shoot, they can answer your questions with good, hard, solid, well-considered, factual information.

So, **Piece of advice #6:** If possible, watch the people at the range shoot. Ask them if there's a match at the range that night. If not, when is the next one? Is anyone who works there, or even several someones, going to be running it/shooting in it? If the answer is no, that's a huge red flag. Can you attend the match just as an observer? Assuming they're squared-away, they'll probably say yes. At the match, watch those people shoot. Is your reaction, “Wow, that person is really good,” or is it, “Damn, I've only been doing this for a few months and I'm better than them”? If you're going to trust someone to give you advice on guns, and shooting, make sure they're an actual gun person who knows how to shoot.

**APPEARANCE**

Look over the facility. Is it clean? Is it well maintained by people who obviously take pride in their jobs? Or is it poorly lighted, dim, dirty? Is it well ventilated? When the ventilation fans are running, can you feel air moving over your skin, or do you find yourself thinking, “Are the fans on? Do they even HAVE fans?”

Is the range itself a large building, with lots of shooting bays, but still every bay is filled, and there are people waiting for a bay to open up? That might sound like a negative. It's not. Show me a huge facility that's insanely busy, I'll show you a place people enjoy going to shoot. Show me a little hole-in-the-wall shooting range with most of the bays unused, I'll show you a place where most people who ever shoot there never come back, because the experience was bad on any number of levels.

**Piece of advice #7:** Don't assume “gun range” and “shabby” are necessarily synonyms. They aren't. Appearance matters. Like a well-kempt personal appearance in a business setting denotes professionalism, a well-kempt facility indicates a professionally run gun range. And when it comes to size, and the number of people using the range: Size matters, and popularity counts.

**MATCHES**

Ask if they host matches at the range. “No” is not an automatic disqualifier. “Yes” is a huge plus. I got my start in competition by shooting little local indoor range pistol matches. Fast-forward 20-some-odd years, I'm an IDPA Master class shooter and multi-time state champion. Wade's hosts Action Shooting International (ASI) matches. Actually, Wade's was where ASI started, literally the first range in the nation to have ASI matches. (A
few years later, there are ASI clubs in 13 states; good ideas do tend to spread.) They run matches Wednesday and Thursday, 7 PM to 9 PM, every two weeks. So I can go to the range early, shoot for a few hours, test out the latest article-assignment gun, do some personal practice, whatever, then shoot a match. For a guy like me, that's heaven.

Piece of advice #8: Ask if the range has a vigorous match schedule.

DRAWING FROM THE HOLSTER & RAPID FIRE

For so many of us, we're into guns largely because we carry them for self-defense. When we join a gun range, we want a place we can practice drawing from the holster, and firing at a pace appropriate for armed self-defense, i.e. fast. Many gun ranges, when you ask them about drawing from the holster and rapid fire, answer with, “Oh, we don’t allow THAT.”

When I was considering joining Wade's, I had the following conversation with Adam Simon.

Me: What's your policy on drawing from the holster, is there any sort of safety certification, any process I can go through to get cleared to do that on the range?

Adam: Yes, there is. Basically, you go out on the range with someone who works here, and we have you do two or three slow draws with an unloaded gun. Then we have you do two or three draws at full-speed. We check to see if there are any safety issues. If there aren't, we go back out into the lobby, and we type into the computer, next to your name, “Good To Draw.”

Me: How about rapid fire?

Adam: Our policy is: Keep all your rounds on the target. If you can do that, and you want to mag-dump as fast as you can pull the trigger, we’re okay with it. We try to live by Big Boy Rules around here, as much as possible.

Me: I LIKE that policy.

Piece of advice #9: If you have a self-defense oriented mindset, ask if the range has a policy that allows drawing from the holster and rapid fire. Spend your money accordingly.

RENTAL CASE

Some, though by no means all, indoor ranges have a rental case full of handguns – and sometimes long guns up on the walls – you can try out to see if you like that particular firearm before forking over your money to find out you don’t like it. Some ranges include free use of those guns as part of your membership. Wade's does, though they do require you buy the ammo there, since they don't want people blowing up their guns with unknown-quality ammo.

Piece of advice #10: Check whether or not the range has guns for rent, and whether or not their use is included in your membership fee.

SUMMARY

I hope all the foregoing can help guide people to avoid some of the common pitfalls encountered when taking the step from “shooter” to “gun range member.” Enjoy the process, and good shooting!
The Speed Beez Lever Loader gives you the mechanical advantage you’re looking for! Works with double-stack GLOCK 9mm mags with or without magazine extensions. A must have for Pistol Caliber Carbines using GLOCK mags.

P44-12337 $24.95

Taylor Freelance Magazine Extensions

The Comp-Tac Pistol Caliber Carbine Magazine Pouch – PLM – is an outside-the-waistband holder to carry a spare magazine for competition. The smooth, low-friction surface allows for a fast magazine removal and easy one-handed insertion of the magazine. “RH” pouches are designed to be worn on the left side, bullets forward; “LH” pouches on the right side, bullets forward.

P44-10047 $37.99
P44-10051 $37.99
P44-10053 $37.99
P44-10050 $37.99
P44-10052 $37.99

TF/Wolf Spring for above
P44-12213 $10.00
Some Colt/Tavor/UZI magazines ship with strong springs capable of powering +10 extensions. Others don’t. This spring eliminates the problem.

CZ Skorpion +10
P44-12378 $49.95
• Extra length/strength spring included
• Thumbscrew-and-gasket retention system allows for quick, easy disassembly.

GLOCK +20 Pictured
P44-12148 $69.99
Transforms Glock 31-round magazines into 51+1 round mags. Legal for PCC competition!

• Extra length/strength spring included.

SIG MPX +10
P44-12376 $29.95
• Works with stock mag spring.
• Angled floor stands the magazine straight up on a table for easier loading.

SIG P320 +5
P44-12375 $39.95
• Extra length/strength spring included.

AR-15/Tavor 9mm SMG +10
P44-12377 $39.95
This extension adds a full 10 rounds to your 32-round Colt SMG-type magazine. Works with many “stock” mag springs. NOTE: Colt SMG mags come from many different manufacturers. Colt offered at least two major types – one where the floorplate slides on from the front, and the other which slides on from the rear. TF extensions are built to work with BOTH the front-mount and rear-mount styles.

California Competition Works Six-Magazine Pouch for PCC Magazines

California Competition Works’ magazine storage pouches^ for PCC magazines is the easy way to protect, store, organize and transport your PCC magazines. Easily holds six 30-round factory or aftermarket pistol-caliber carbine magazines.

P44-39921 $29.95

**Lyman Neck Expander Die**

Improves accuracy of cast and jacketed bullet reloads. Extends case life. A “Must-Have” die for the cast bullet or flat-base bullet user. First step expands on the case neck to just under bullet diameter for precise case tension in the finished reload. The second step expands the case mouth to bullet diameter or slightly over. This allows the jacketed or cast bullet to be started perfectly centered in the case mouth and properly aligned with the axis of the case neck. By adjusting the plug slightly deeper, the second step also provides a slight flaring of the case mouth for reloaders using cast bullets.

**Dillon’s 1” Bench Wrench**

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you’re setting up a “naked” machine, there’s plenty of room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded overhead. We’ve addressed this in two ways. We offer 1” die lock rings and a 1” Bench Wrench to fit them. This combination gives much more room to re-adjust dies after they’re already mounted. The opposite end of our 1” wrench is a 7/16” box-end for adjusting the Powder Bar of any Dillon Powder Measure. All our lock rings fit any standard 7/8” x 14 dies.

52 Blue Press
Dial Caliper^<br>This dial caliper is made of hardened stainless steel and features a covered track that keeps chips out for longer life. The measuring faces are hardened, ground and lapped. The large, adjustable dial is easily read to .001 inch and measures .100 per revolution. Features a no-glare satin chrome finish.<br><br>Digital Caliper^<br>Accurate, Easy to Read!<br><br>Lyman Products<br><br>Lyman’s Precision Funnel Set is the ideal system for the serious reloader. The Precision Funnel Set is made to be completely static free, with a body of die-cast aluminum and precision-turned aluminum inserts. This is no “one size fits all” funnel; the Precision Funnel Set uses precision-machined, caliber-specific inserts to properly fit the case neck. The inserts can be quickly and easily installed by simply pushing them into place and then pulling them out when changing calibers. The Precision Funnel Set also comes with a padded storage case that neatly stores extra inserts when not in use. The set includes inserts for .22, .243/6mm, .25/6.5mm, .270/7mm, .30 and .338 caliber rifle cartridges.<br><br>Lyman Scale Weight Check Sets enable you to check/calibrate your scale using known weights.<br>Weight Set .5 - 60.5 Gr. P44-15958 $36.95<br>Weight Set .5 - 210.5 Gr. P44-15959 48.95

CED Ultimate Pro Powder Trickler<br><br>Lyman Powder Pal Funnel Pan<br><br>The Original GLOCK® Field Knife<br>Field Knife, GLOCK, with scabbard, 1 ea. P44-15483 $34.95

^ WARNING: The products offered for sale in this catalog can expose you to chemicals, including Lead, which are known to the State of California to cause cancer, birth defects or other reproductive harm. For more information, go to www.P65Warnings.ca.gov.

Kershaw Volt II opens one-handed and with an authoritative “twack” thanks to Kershaw’s SpeedSafe® assisted opening system. A simple pull back on the flipper and the Volt II opens smoothly and easily.<br>Blade length: 3.25” Closed: 3.9” Open: 7.1” P44-66698 $55.95

Designed by RJ Martin, the Volt II has the same versatile blade and handle style as the original Volt, but with a hardworking 8Cr13MoV stainless steel blade and textured, black glass-filled nylon scales.<br>Blade length: 3.25” Closed: 3.9” Open: 7.1” P44-66699 $49.95

The Kershaw Method opens quickly, easily, and manually with Kershaw’s KVT ball-bearing system and a built-in flipper. The handle is black – of course. The G10 handle features an unusual machined pattern reminiscent of an architectural truss.<br>Blade length: 3” Closed: 4.25” Open: 7.25” P44-66700 $39.99

Kershaw Pub looks like nothing you’ve ever seen. The blade is a modified sheepfoot with a straight edge and clipped rather than rounded tip.<br>Blade length: 1.6” Closed: 3.1” Open: 4.5” P44-31323 $24.95

The STINGER: Comtech’s own personal defense device. Designed to act as a “force multiplier,” it’s like having the punching power of a karate master – instantly! There’s really nothing like it for easy carry and access. It passes un-noticed by 90 percent of people who see it. Yup, just another “keychain device” to most, and yet it works so well when needed. You deserve a Stinger!<br>The Original GLOCK® Field Knife

Comtech’s STINGER
AGPUL’s Enhanced Self Levelling Follower is a drop-in replacement for USGI 30-round magazines. Features a four-way anti-tilt design.

MAGPUL Magazines for GLOCK® Pistols

For GLOCK Pistols

Magazines/1911 Guide Rod

SPRINGFIELD Magazines/1911 Guide Rod

C Cormick Railed Power Mags™ feature patent pending Dual Wall Feed Rails™ that are at least twice the strength of regular feed lips. They have a patented tactical RPM™ follower, a stainless steel mag tube, an EZ clean base pad and a proven customer-satisfaction policy. All CMC magazines are designed to give the pistol shooter the advantage of extra shot capacity and improved performance.

CMC Magazine

Railed Power Mags™

CMC Magazine

ADC Super Thumb

ADC Super Thumb® offers models for popular centerfire pistols and 10/22 style magazines. ST1 is for 9mm and .40 caliber Beretta, Browning, Ruger, SIGARMS, S&W, etc. In addition, the ST1 has interior rails and grooves to accommodate Colt Government magazines.

ADC Super Thumb

ST2 is for GLOCK and Para-Ordnance magazines.

ST3 handles virtually all centerfire, single-column magazines.

ST22 is for Ruger 10/22 rifles.

STJR is for Ruger, Browning, Colt and High Standard .22 pistols.

ADC Super Thumb
Elite Tactical Systems' C.A.M. Rifle Magazine Loader loads AR15, AK47, AK74, FN SCAR-16/17, AR10, G36, Steyr AUG, MP5, CZ Scorpion EVO, Colt SMG, UZI and more in 5.56x45/.223, 7.62x51/.308, 7.62x39, .300BLK, 5.45x39, 9mm and more.

The ETS C.A.M. Pistol Magazine Loader loads most 9mm or .40 caliber pistol magazines – including single stacks. It doesn't force rounds through the feed lips, so it won't damage magazines.

Both ETS C.A.M. magazine loaders will lift up to 10 rounds of ammo directly from an ammo tray!

ETS 30-round AR magazines have a built-in coupler that allows multiple magazines to be connected in seconds with no tools. Clip-on dust covers keep dirt and debris out during storage.

ETS magazines for GLOCK® pistols are compatible with aftermarket floorplates for GLOCK magazines, feature special grip ribs on the floorplate to aid in extraction and are easy to disassemble for cleaning and maintenance.

**Made in USA With a Lifetime Warranty!**

The HMB Bolt

Young Manufacturing is the licensed manufacturer of the HMB bolt. The HMB Bolt by HM Defense eliminates the pass-through cam-pin hole and replaces it with a cam-pin socket and radiused cam-pin design. The new patented design eliminates the natural weak point of Mil-Spec bolts by significantly increasing the amount of metal (and strength) at the cam-pin location. The result: NO MORE BROKEN BOLTS! The HMB Bolt also reduces contact between cam pin and firing pin, enabling smoother operation of the firing pin, bolt lugs and aft gas rings. The new cam-pin socket also retains lubrication for extended operations. Comes with a phosphate cam pin.

HMB Bolt

P44-66680 $99.00

Young Manufacturing’s Upper Receiver Vise holds any AR15 upper receiver regardless of the manufacturer. Since it supports the receiver from the inside, the outside dimensions are of no concern. Made from aircraft-grade 6061 T6 aluminum and anodized to MIL-A-8625 Type 3 Class 2.

YM Upper Receiver Vise

P44-66679 $34.99

This tool makes it simple to remove or install a new ejector and spring into the AR-15 bolt. Anyone who has tried to do this without a tool will be amazed at the reduction in the number of cuss words needed to perform the task. Comes with alignment and roll pin punch.

YM Bolt Assembly Tool

P44-66678 $39.95

Jerry Miculek AR-15 Compensator

Jerry Miculek’s three-chamber AR-15 Compensator fits threaded-barrel rifles and may be “clocked” for left- or right-handed shooters. Used by many top 3-gun competitors.

P44-11328 $49.95

JP Enterprises

Tactical Performance Gear

JP Enterprises (Competition Only)

Low Mass Buffer JPLMB

P44-12585 $59.95

JP AR Speed Hammer

JPSH-1A Low Mass Hammer

P44-12617 $59.95

JP Enhanced Reliability, Reduced Power AR Spring Set

P44-12590 $10.95

JP Reduced Power AR Spring Set

P44-12618 $10.95

Not Pictured, but also available:

JP Enhanced .223 Gas Rings

P44-11917 $9.95

JP Enhanced .308 Gas Rings

P44-11718 $9.95

Specialized Dynamics Emergency AR(epair) Kit

The Specialized Dynamics AR-15 Emergency Repair Kit includes: three gas rings, extractor spring, firing pin retaining pin/spring, hammer/trigger pin, take down detent and spring.

P44-19460 $19.95

Crucial Parts for Your AR-15

Badger Ordnance Tac Latch

The Badger Ordnance Tac Latch makes it much easier for you to operate the latch on your AR-15/AR-10 charging handle. It works especially well for “flat-top” rifles equipped with low-mounted optics.

P44-10379 $18.95

**Elzetta Tactical Flashlight Mounts**

Elzetta ZFH1500 Flashlight Mount for AR15s

ZSM Tactical Shotgun Flashlight Mount

ZRX Tactical Flashlight Mount

Every Elzetta ZFH1500 Flashlight Mount for AR15 rifles and ZSM Tactical Shotgun Flashlight Mount comes with sizing adapters, giving the mounting ability to accommodate flashlights from 0.7 to 1.05 inches (18 to 27 mm) in diameter. This includes flashlights from popular manufacturers such as InForce®, Streamlight®, Pelican®, Laser Devices®, SureFire® and of course, the Elzetta® ZFL-M60. (Sizing Adapters are not required when using an Elzetta ZFL-M60 or other 1-inch lights.) The Elzetta ZSM is made from the same advanced glass-filled polymer that has proven itself in the popular Elzetta ZFH1500.

The NEW Elzetta ZRX Tactical Flashlight Mount is made for flashlights with standard one-inch bodies and will accommodate a range from 0.94 to 1.04 inches (23.8 to 26.4 mm). This includes many popular tactical flashlights including the Elzetta ZFL-M60. The Elzetta ZRX clamping rings are made from Mil-Spec Type III Hard Anodized aluminum, the body is a glass-reinforced polymer and the hardware is steel. The ZRX weighs 1.1 oz (32g).

ZFH1500 AR15 Flashlight Mount

P44-12020 $29.95

ZSM Tactical Shotgun Mount

P44-18050 39.95

ZRX Tactical Flashlight Mount

P44-15487 35.00

**Viking Tactics V-TAC MK1 Sling**

Viking Tactics’ V-TAC MK1 Sling is quick, instantly adjustable to improve your shooting position, allows shooting from weak-side shoulder, secures the carbine during handgun transitions, and allows hands-free movement in difficult surroundings.

CAR-15

P44-11961 $34.95

FN-FAL/HK-91

P44-11962 40.00

**KNS Precision, Inc. AR Accessories**

KNS Precision, Inc. AR-15 Bolt Catch Retainer Pin.

P44-33390 $9.00

Perma-Pin Firing Pin Retainer for M-16 and AR-15 replaces the standard cotter pin found in the bolt carrier to retain the firing pin (as in original Stoner rifles). Made of tool steel. No modification to gun required.

P44-19927 $9.00

**Gunslinger Spring Kits**

From Lee Fisher, one of the premier “cowboy gunsmiths.”

Colt & clones

P44-20510 $26.95

Ruger Blackhawk/Vaquero

P44-20511 24.95

Rossi/Navy Arms 92 lever guns

P44-20513 24.95

Stoeger IGA shotgun

P44-20514 14.95
By Doug Larson

Most informed shooters have heard of Gunsite Academy, located north of Prescott, Arizona. It is the oldest and arguably the best and most prestigious gunfighting school in the world, and it is certainly the oldest privately owned and operated school. It has trained everyone from women who have never handled a gun before to law enforcement, military and personnel from government agencies that try to keep their existence quiet.

Gunsite is not a school of competitive shooting. It is devoted to teaching law-abiding citizens in good standing how to defend themselves with a firearm; and the Gunsite curriculum, or doctrine, changes over time as new skills and tactics are learned from actual deadly force encounters.

Gunsite is about 3,200 acres in size and was started in 1976 as the American Pistol Institute by Lt. Col. Jeff Cooper, retired USMC. He developed what is referred to as the “modern technique of the pistol” and is typically what you see depicted in the movies and on TV when the good guys handle a gun – although Hollywood usually does a very poor job of portraying proper gun handling.

A student who has never handled a gun – and some even bring a gun in its box and have never shot it – will, after the five-day Gunsite 250 Defensive Pistol Class, be able to shoot and handle a handgun better than most police officers and military personnel. This is not an exaggeration.

I recently attended the Gunsite 250 Defensive Pistol Class. This is the class that is required before most other Gunsite classes can be taken, and teaches students the basics of defensive pistol use. It was not the first time for me, but it was for most of the other 22 students. They came from a variety of backgrounds including law enforcement – both active and retired – and various vocations and professions. There were three law enforcement officers who were excellent shooters when they arrived, while one student, Brock Auten, was in his thirties and had been shooting nearly all of his life. He is a Doctor of Chiropractic, so is highly educated, but is still a regular guy.

I carried a Colt (colt.com) Competition Series Government Model 1911 as did Brock. Both guns had the Series 70 trigger that some believe is better than the Series 80 system with its firing-pin safety. We both used holsters, magazine carriers and belts by Blade-Tech (bladetech.com). Brock shot Doubletap (doubletapammo.com) ammunition while I used Black Hills (black-hills.com) ammunition. Both Colts were unmodified straight from the factory, except that I replaced the standard sights with excellent Truglo Tritium Fiber Optic TFX (truglo.com) sights that glow brightly in daylight or the dark. Everything worked very well. [Editor’s Note: Don’t feel it’s a requirement to bring a 1911 to Gunsite. Revolvers, striker-fired and SA/DA autos are all welcome.]

There were three instructors, Mario Marchman, Steve Hendricks and Jerry McCown, and all have been instructors for many years. They all have law-enforcement backgrounds, know what they are doing and how to teach it. The class was divided so that only half was on the firing line at a time, so the student-to-instructor ratio was three to one, meaning all students got personalized attention. Perhaps I’m a slow learner, but even after numerous Gunsite classes and courses from other world-class gun fighting schools and instructors, I learned new things.

The curriculum included the four safety rules – they always come first and are strictly enforced. Gun handling, shooting positions, marksmanship, emergency...
and tactical reloads, indoor and outdoor gunfighting tactics, interlimb interactions, drawing, holstering, malfunction clearing, controlled pairs, hammers, failure responses, non-standard responses, turns, movement, night shooting and the use of tactical lights are all covered. And if you don’t know what some of those things are, you’re not very well prepared for a deadly force encounter and need competent training. There isn’t enough room here to explain these skills, and besides, you can’t learn them from reading or watching a video. Training under the eye of a good instructor is needed to gain competence and learn how to perform these skills under stress without having to think about them.

Along about Wednesday, halfway through the class, many if not most of the students experience a phenomenon that has been called “the Gunsite Epiphany.” They suddenly realize that most things they thought they knew about shooting and gunfighting were wrong and that they were now learning the right way to do things that could save their life or the lives of those they care about. They also realized that knowledge and skill can replace fear, and that they were developing the tools they need to deal with life-threatening confrontations that could happen anytime at any place. Even more importantly, they learned that the gun is a last resort, and that it is far better to avoid a fight if possible.

“I thought I was a decent shooter before the class,” said Brock. “But sometime Wednesday, I realized not only that I was not very good before the class, I did not have a complete understanding of how fast a situation can go bad and how fast I might have to react. I thought I had been pretty aware of what was going on around me, but I was not prepared to take action for self defense as quickly as might be necessary.” Auten intends to take more Gunsite classes, and in fact, some students had actually signed up for more classes before the 250 class was over.

By the end of the class, both men and women students – even those who started out with poor or even no gun handling skills – were able to draw from a holster and fire two rounds hitting the center of the target at seven yards in 1.5 seconds. Remarkable, and that’s just one of the benefits that comes from attending the class. Another is that if you enjoy shooting as a pastime, you will enjoy it even more from that point forward, if only because you become a better shooter.

Sure, Gunsite is expensive and most classes last five days. But good training is not cheap and students learn far more than they can in a one, two or even three-day class. People from all over the world come to Gunsite for training in handguns, rifles, carbines, shotguns and even edged weapons. And some come back every year, or more often. They realize that it’s impossible to put a price on their lives or the lives of people they love, so they make the time and financial commitment.

Smart Mats™ are cleaning mats on steroids. The no-slip backed padded mat features an oil-resistant surface. It allows you to properly clean your gun without ruining the kitchen table and is large enough to handle field-stripped guns. The ingenious magnetic parts tray ensures your pins, screws and springs are never lost again. This is real world gun cleaning taken to the next level.

AR-15 Smart Mat
P44-29041 $19.99
1911 Smart Mat
P44-29040 14.99
Handgun Smart Mat
P44-29042 14.99

The Master Bench Block™ is most comprehensive AR15 bench block ever! It allows you to tap 13 critical pins from 5 different components. The block is wrapped in an over-molding that grips to your bench to prevent slippage.

P44-29033 $29.99

Carbon Boss™ – AR15. This is the most comprehensive carbon removal multi-tool ever built. Extremely versatile, it has 12 precision surfaces to clean the most critical parts of your bolt, bolt carrier, cam pin, and firing pin. It’s the enemy of your AR15’s worst enemy.

P44-29039 $29.99

The unique Accu-Grip™ Picks and Brushes get the job done, feel good in your hand, and won’t scratch your firearm. Eight profiles dig gunk out of the places that even the sun don’t shine. They’re tough on the crud but tender on the metal. A better designed, better built detailing kit that just might make your dentist jealous.

P44-29036 $9.99

The AR15 Brush Combo™ contains the critical components you need to keep your AR15 chamber and bore carbon free. It contains a star chamber brush and star chamber mop for cleaning inside the hard to reach star chamber. Star chamber pads help collect left-over carbon while applying the perfect amount of oil or solvent. The .223/5.56mm bore brush scrubs baked on carbon from lands and grooves.

P44-29037 $9.99
P44-29038 $12.99

Installing a pivot pin is a small step that can quickly become a giant pain in the neck. Meet the AR15 Pivot Pin Tool – the one tool guaranteed to take the nail biting, pin-launching task of installing a pivot pin and turn it into something you might actually look forward to. Align the guide, insert the spring and detent pin, slide the pivot pin into place. Click. Snap. Done.

P44-29034 $9.99

There’s no easy way to scrape carbon out of the star chamber of an AR15 unless you’re a surgeon. That’s why you use a star chamber brush to loosen the carbon then remove it with these star chamber cleaning pads. Done deal. Now get back to shooting. 20 wool chamber pads per package.

P44-29035 $79.99
Swab-its
A Swab for Every Job!

No strife, there I was...in my office, cleaning my revolver when the boss walks in with that "whisky-tango-foxtrot" look on his face. "Hi," I said (thinking last), "I'm trying out these Bore-tips before I write the Blue Press copy for them. They work GREAT!" The Bore-tips Swabs REALLY DO work. What you can't see under the foam is a plastic jag sized for a tight bore fit which provides for the uniform application of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reusable.

P44-12690 9.99

Star Chamber Cleaning Foam Swabs® are for AR-15, M4 and similar MSRs. 3-pack
P44-10056 $13.99

The Swab-its® Handgun Cleaning Kit for 9mm/.357 caliber handguns contains four Bore-Sticks®, a three-in-one tool that replaces the cleaning rod, jag, and patch; a nine-piece Multi-Surface Gun-Tips® package for internal and external cleaning requirements; and a .4 ounce bottle of BREAKTHROUGH® Battle Born HP Pro lubricant and protectant. As with all Swab-its products, the Bore-Sticks and Gun-Tips are made of reusable, lint-free foam that is washable with degreasing soap and water or mineral spirits.
P44-11907 $19.95

The Swab-its® Modern Sporting Rifle Cleaning Kit contains 6 .223/5.56 Bore-tips® for bore maintenance; a nine-piece Multi-Surface Gun-Tips® package for internal and external cleaning requirements; three Star Chamber Cleaning Foam Swabs®; and a .4 ounce bottle of BREAKTHROUGH® Battle Born HP Pro lubricant and protectant. As with all Swab-its products, the Bore-Sticks, Gun-Tips and Star Chamber Swabs are made of reusable, lint-free foam that is washable with degreasing soap and water or mineral spirits.
P44-11908 $24.95

- The HYSKORE Degreaser consists of a 12" x 6" x 4-1/2" polypropylene tray with an angled drainage surface and a well with a perforated basket for holding and draining small parts. The set also includes a standard double-end nylon gun-cleaning brush. Small parts and even complete trigger groups and bolt assemblies can be placed in the basket and the well filled with solvent to cover the parts and left to soak for extended periods. Then the basket can be withdrawn, draining all the parts. The set includes a cover with an integral holder for the brush. This means the solvent that has been contaminated by the cleaning process can be left in the well of the Degreaser (rather than returned to the bottle) with the cover in place so that it's ready to be used for the next cleaning event. The tray, cover, and basket are made from polypropylene plastic. This has been proven to be impervious to all popular commercial cleaning solutions. It will also resist kerosene, acetone, and gasoline.
P44-10209 $15.95

- On gun dealers shelves since 1976, the AUCO E-Z Brite Wonder Cloth is still a must for keeping stainless steel and nickel-finished revolvers looking like new. Demand the original lead and carbon wipe!
P44-18613 $7.99

- Original D•LEAD Hand Soap quickly cleans heavy metals as well as paint dust and firing range residue from the skin and fingernails. Removes lead, nickel, cadmium, arsenic, mercury, silver, zinc and most other heavy metals.
8 Oz. Bottle
P44-19915 $2.95

Ram Rodz Barrel & Breech Cleaners
.22 Caliber/5.56mm, 300 count
P44-43289 $12.95
.38 Caliber/9mm, 200 count
P44-43290 12.95
.40 Caliber/10mm, 100 count
P44-43291 12.95
.45 Caliber, 75 count
P44-43292 12.95

The RamRodz® Range Kit comes with 400 Breech Cleaners, 100 .22-Caliber swabs, 60 .38-Caliber swabs, 50 .40-Caliber swabs, 40 .45-Caliber swabs and 30 .50-Caliber swabs.
P44-43293 $34.95

### Slip 2000 Products

#### Slip 2000 Carbon Killer
- Provides you with a safe, effective way to clean carbon, lead and plastic wad fouling. Unlike other gun cleaners, this product is non-flammable, non-hazardous and biodegradable. Designed for soaking metal parts with baked on carbon, Carbon Killer dissolves carbon and lead on contact. **NOTE:** Carbon Killer is for cleaning internal metal gun parts with baked on carbon by soaking them. It is an aggressive cleaner and should not be used to clean the outside of your gun. It can damage and even remove some finishes.

#### Brian Enos' Far Superior Slide-Glide
- Slide-Glide Lite is a thinner viscosity for lower temperatures (F30º+). You put it. Slide-Glide Standard is for use in warm weather (F60º+), which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it. Slide-Glide Standard is for use in warm weather (F60º+), Lite is a thinner viscosity for lower temperatures (F30º+).

Secure Firearms Products
Recoil Spring Tester

Secure Firearms Products’ Universal Spring Tester will help you determine if the recoil spring in your pistol needs replacing, and you’ll save time and money by testing and organizing loose recoil springs in your shooting bag.

P44-15305 $39.95

Tru-Weight Trigger Scale

The Tru-Weight Trigger Tension Scale has a range from eight ounces to eight pounds. A unique weight indicator remains at the exact point of trigger release, making it easier to read your trigger pull pressure.

P44-14838 $26.95

Grace USA Gun Care Tool Set

This custom designed 12” x 9” x 1-1/2” case is made from durable soft Nukaf and contains a 17-piece set of Grace USA Gun Care Screwdrivers (8 ea.), Solid Brass Pin Punches (8 ea.) and a specially fabricated 8 Oz. Brass Hammer. The screwdrivers are hand-assembled and custom hollow ground to fit scope screws, plug screws, guard screws, etc. The handles are turned from quality Maine hardwood and protected with a smooth finish. Made in USA.

Grace USA Gun Care Tool Set

P44-10680 $99.95

10-8 Performance Armorer Tool

The 10-8 Performance Armorer Tool is a simple, non-marring tool useful for applications where prying or poking with metal tools can easily damage your work. The rigid chisel-pointed end and semi-flexible flat blade end each have unique uses.

P44-15434 $7.95

Bondhus Hex Key Sets

P44-16823 6.35

Gorilla Grip Set

P44-22142 10.75

Barrel-Lite®
P44-10529 $4.95

Secure Firearms Products’ Universal Spring Tester will help you determine if the recoil spring in your pistol needs replacing, and you’ll save time and money by testing and organizing loose recoil springs in your shooting bag.

P44-15305 $39.95

The Tru-Weight Trigger Tension Scale has a range from eight ounces to eight pounds. A unique weight indicator remains at the exact point of trigger release, making it easier to read your trigger pull pressure.

P44-14838 $26.95
The Specialized Dynamics AR15/AR10 Armorers’ Upper Receiver Block is made from billet aluminum and holds your upper receiver securely in order to make it easier to install barrels, free-float tubes, muzzle devices, etc. One block fits AR15s and ArmaLite and DPMS platform AR10s.

M-14 Bolt Roller Greaser

So THAT’s how you grease that little S.O.B. (Slick-Operating Bolt, that is.)

Magazine Base Pad Tool/
Scope Battery Cap Remover

STUL

GLOCK Slide Removal Tool

Engages the slide lock and provides a mechanical advantage making slide removal easier and faster. For those with large fingers, small fingers, tired fingers, anyone looking for a way to simplify the removal of your GLOCK® slide.

Arrendondo Multi-Function Squib Rod

This is a MUST-HAVE range-bag accessory. It’s a squib rod (for removing stuck bullets), magazine base removal tool, and scope windage adjustment and battery cap removal tool.

Note, while there are two lights pictured in this photo, only one is included for $19.99.
By Gus Cotey

John Moses Browning was the most prolific firearms designer of all time. His design genius led to the development of an almost unfathomable assortment of firearms of varied action types for an uncommonly wide variety of purposes; everything from tiny pocket pistols, to heavy caliber machineguns, to 37mm autocannons.

One of Browning's smaller designs was the semiautomatic Colt 1908 Vest Pocket Model in caliber .25 ACP, which was also referred to by Colt within the factory as their Model N. This gun was essentially an American made version of the Belgian FN Model 1905, first sold in 1906 and also a Browning design. The .25 ACP cartridge (aka, 6.35mm Browning and 6.35x16mmSR) is also a John M. Browning design initially developed for use in the Belgian FN M1905 pistol. This tiny centerfire round was intended to deliver similar performance as .22 Long Rifle ammo of the day in short barrels of equal length, but with the enhanced ignition reliability of central priming. The .25 ACP features a straight-sided, semi-rimmed case with a pronounced extractor groove, which permits the extractor hook to grab onto a greater surface area than possible with a .22 rimfire case, which further enhances functional reliability by means of more positive extraction.

The standard load for the .25 ACP is a 0.251 diameter, 50-grain FMJ RN, with currently advertised muzzle velocities from a 2-inch barrel of 750 to 771 fps, depending on the manufacturer. Older ammo catalogs from various makers stated the MV as 810 fps. Expanding bullet ammo is also currently available with advertised MVs of 900 FPS.

The Colt 1908 Vest Pocket pistol has a straight simple blowback semiautomatic operating system, meaning that the weapon fires from an unlocked breech and relies solely on slide mass and recoil spring tension to prevent significant slide movement upon firing until breech pressure has safely diminished. The 13-ounce pistol feeds from a 6-shot, single-column detachable box magazine retained in place by a heel-type magazine release. It has a 2.125-inch, 6-groove left-hand twist barrel with a twist rate of 1 turn in 16 inches. Unlike the also Browning-designed Colt M1903, caliber .32 Auto and M1908, caliber .380 Auto pistols designated by Colt as “Hammerless” models, but with internal hammers hidden by a space within the rear of the slide, the Colt M1908 Vest Pocket .25 ACP pistol is striker-fired and thus truly hammerless.

To fire the Colt 1908 Vest Pocket Model, the shooter inserts a loaded mag into the weapon's butt until the heel-type magazine release snaps in place to retain it. The slide is then retracted back as far as possible, which compresses both recoil spring (Colt’s term, “Retractor Spring”) and the firing pin spring (Colt’s term, “Main Spring”). The slide is then released which pushes the top round in the mag forward, up the barrel’s feed ramp and finally into the chamber. Fully retracting the slide also pulls back the gun’s striker-type firing pin until its integral cocking stud is captured by the sear and held in place.

Grasping the pistol in the firing hand disengages the grip safety, which permits the trigger to be pressed. Pressing the trigger pushes the connector on an upward angle, which in turn exerts pressure on the front of the sear, thereby causing the sear’s rear portion – upon which the cocking stud of the gun’s striker-type firing
pin is pressed against via spring tension – to pivot downward. This frees the firing pin to dart forward to set off the primer of the chambered round and ignite its powder charge. In order for the firing pin to maintain proper orientation, its integral cocking stud is contained within a guide slot milled into the 6 O’clock region of the firing pin channel.

As the slide is pushed backward via propellant gas pressure, the spent cartridge case is pulled from the chamber by the extractor and then flung free from the ejection port by the tip of the firing pin, which doubles as an ejector. The slide continues to move back a bit more allowing the firing pin to be retained in place by the sear grabbing onto its cocking stud. The slide now moves forward by energy supplied by the compressed recoil spring, picks up a fresh round, and returns to battery. When the trigger is released, the connector engages with the sear and another shot can be fired when the trigger is pressed again. Spring tension for the sear, connector, grip safety, trigger, and magazine catch is supplied by one fork-shaped, two-tined leaf spring residing in the rear of the frame.

The Colt 1908 Vest Pocket pistol has a manual safety on its left side at the rear of the frame. In the upward position, the weapon cannot be fired and the side is locked in place, and when pushed downward, the gun is ready to go. There is also a small notch in the slide ahead of the safety cutout, which permits the rear corner of the manual safety to hold the slide open for inspection. In this position, the slide is not retracted far back enough to pick up a round from the magazine and too far back to facilitate disassembly. Note that when this pistol has fired its last shot, the slide does not lock open as with some other later designs.

Another important safety feature of the M1908 Vest Pocket pistol prevents the weapon from firing if the slide fails to go fully forward into battery. As the slide moves back, it simultaneously presses down on the connector, which prevents it from engaging the sear. Only when the slide is fully forward is the connector elevated high enough to engage the sear, thanks to a mill cut lining up directly above the connector.

Sometime in 1916, the Colt Vest Pocket .25 ACP pistol began to be equipped with a magazine safety designed by Colt engineer George H. Tansley. Mr. Tansley was granted a patent for the device on July 31, 1917 (U.S. Patent No. 1,234,961); however, this patent date would not show up on Colt Vest Pocket pistols until the early 1920s. My own personal blued M1908 Vest Pocket .25, which was built in 1920, has the device installed, but the patent dates on the left side of the slide only go up to 1910.

The M1908 Vest Pocket pistol’s Tansley-designed magazine safety device is activated when the magazine is out of the mag well by means of a cylindrical projection sticking out of the rear flange of the recoil spring guide. This projection enters a hole in the frame which applies force delivered by the recoil spring to a U-shaped component with two arms residing in mill cuts on each side of the frame’s mag well. When the device is activated by removal of the mag, the right arm presses on the connector, lowering it slightly and preventing it from engaging the sear. Inserting the magazine forces the device forward, which elevates the connector allowing it to engage the sear when the trigger is pressed.

I’m not a fan of magazine safeties, but I do admire the elegant simplicity of Mr. Tansley’s device. Tansley received several other firearm-related patents, and even
one for a milk-and-cream separator. He must have been a clever man of uncommon mechanical aptitude.

Fieldstripping the Colt 1908 Vest Pocket pistol is relatively simple. First clear the weapon by removing the magazine and racking the slide back to examine the chamber and/or eject a chambered round if present. Now, press the trigger to dry fire the piece to release the firing pin from the sear. In the case of a gun equipped with a Tansley magazine safety, an empty mag must be inserted before this can be done and then the mag is removed. With the gun in the left hand, push the slide back with the right hand until the front of it is even with the rear portion of the series of longitudinal grooves milled around the circumference of the barrel right behind the muzzle. Now, rotate the barrel clockwise until three machined lugs are visible through the ejection port. The slide can now be removed from the frame, the barrel rotated back and tilted downward for removal, and the recoil spring, recoil spring guide, firing pin, firing pin spring, and firing pin spring guide removed as well.

The 1908 Vest Pocket pistol was available with either a blued or bright nickel finish. The customer also had a choice of molded black hard rubber, pearl, ivory, and checkered walnut stocks. The stocks of the early models were straight and parallel to the slide. The molded stocks have Colt’s trademark “Rampant Colt” molded onto them while the others have medallions bearing the same symbol installed on them.

One often hears that it is impossible to hit anything with diminutive, small-caliber pistols such as the Colt Vest Pocket .25 ACP. With high quality guns like the M1908 Vest Pocket, this is patently false. These weapons are certainly not target pistols, but are certainly capable of placing most of their shots on a grapefruit-size target across the room in the hands of an adequately skilled marksman. I really enjoy shooting my personal Colt M1908 .25 ACP, which I inherited from my late father. The sights are really tiny and machined into the slide. They are hard to see under most conditions. What really helps, however, in delivering quick close range hits is the deep channel machined into the top of the slide, which acts like what was called a “guttersnipe” type of sighting system, to guide the shooter’s eyes to the target.

My M1908 Vest Pocket pistol is reliable, provided that the ammo used is loaded hot enough to cycle the action. One lot of Fiocchi 50-grain FMJ ammo I recently used (Lot 4811009-0340 CIP 006) often failed to move the slide back far enough to pick up the next round from the mag. This lot averaged only 626 fps for 10 shots with a lowest recorded reading of only 580 fps. Remington UMC and Prvi Partizan PPU (Serbian) 50-grain ammo tested on the same day cycled perfectly, with average respective velocities of 714 and 741 fps. Hornady Critical Defense 35-grain FTX ammo has likewise run perfectly through my gun, although I
have never had the opportunity to chronograph this load. As the gun is fired, cases are ejected briskly and their primers exhibit good, deep firing pin strikes. One question often asked about the .25 ACP round is about its reliability as a defensive round against armed assailants. Well, as a general-purpose handgun round, the answer is certainly a resounding no. Even general-purpose defensive handgun calibers, including those beginning with a 4 after the decimal point, cannot be consistently counted upon to quickly incapacitate determined adversaries with single – or sometimes even several – torso hits. The little .25 ACP therefore, while certainly capable of inflicting mortal wounds with body shots, cannot be counted on to neutralize armed foes with anything but central nervous system hits delivered to the cranio-ocular cavity. At the very close-quarters, last-ditch desperate encounters for which it was intended, the little Colt Model 1908 Vest Pocket pistol is capable of, and has been successfully used to, deliver such hits. A few of these pistols were even issued during WWII to deep-cover operatives working for the Office of Strategic Services (OSS) the forerunner to the CIA, and clandestine elements of the US Military, such as the Army’s G-2, CID, and CIC organizations.

Production of the Colt Vest Pocket .25 lasted from 1908 to 1948, with production ceasing from 1943 to 1945 due to the demands of WWII. The total number of these guns produced is often cited as 420,705 units, based on the highest serial number known to exist. The actual number is slightly under 410,000 based on a change in Colt’s serialization shortly after WWII.

The Colt 1908 Vest Pocket Model, Caliber .25 ACP is not a toy. It is a purpose designed and built, very specialized highly concealable firearm intended for very close range defensive encounters of the most desperate and dire kind. Its inventor, John Moses Browning was many things. Among these, he was a mechanical genius, a successful designer of a prodigious array of firearms for a great multiplicity of uses, and an American patriot. One thing he was most definitely not was a toymaker.
Built for speed, these High Performance red dot sights will take your shooting ability to the next level. By using a single red dot as an aiming point, target acquisition is as simple as point and shoot. The unique Heads-Up-Display (HUD) design provides an unlimited field of view, while eliminating obstruction and tunnel vision common to tube-style scopes.

**Bushnell TRS-25 Ultra Compact Red Dot Sight**

Bushnell’s Trophy TRS-25 Ultra Compact Red Dot Sight is designed for use on shotguns, handguns and rifles. It is constructed and assembled by highly skilled craftsmen to Bushnell’s high quality standards. The precision and craftsmanship with which this scope was built ensures its performance under demanding conditions. This scope will provide the shooting accuracy and repeatability which have made Bushnell legendary. Features unlimited eye relief and a three-minute-of-angle dot.

**TRS-25 (Includes riser, not pictured.)**
- P44-31318 $119.95

**Scout Scope Mounts**

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

**Scout Scope Mount for AK Rifle**
- P44-25374 $79.99

**Scout Scope Mount for SKS Rifle**
- P44-25373 $78.99

800-223-4570 • 480-948-8009 • bluepress.com
The M2 Chronograph comes with sensors, screens and one two-foot mounting bracket. A nylon carrying case and tripod are available options. The CED7000 Shot Timer is a breakthrough in technology. No other timer to date offers this combination of advanced features, compact size and light weight. This is the “next generation” Shot Timer here today! Comes with a rechargeable battery with low-battery LCD indicator and a universal charger.

**PROTEKTOR MODEL**

All Protektor Model leather bags are made with the best top grain cowhide available. The welded steel rest is strong enough to stand on and won’t break if dropped (Owl Ear Front Bag sold separately). “Sand not included.”

Stribog SP9A1: An Ergonomic Win for CQB

Compact and lightweight, Stribog is an excellent defensive weapon for smaller-statured users, also for people who may have to fight around vehicles or other confined spaces.
By Oleg Volk

Named after the Slavic god of wind, Stribog is a conventional-looking 9mm blowback firearm feeding from transparent double-stack, double-feed magazines of 10-, 20- and 30-round capacity. Available in submachine gun, carbine and pistol configurations, Stribog comes from Slovak gun maker Grand Power, known for the advanced rotary breech pistols designed by Juroslav Kurachina. Unlike the revolutionary GP K100 and its derivatives, Stribog seems mechanically conventional. A closer look reveals several original solutions combined with better-than-usual ergonomics.

The overhanging bolt configuration, with most of its mass positioned above the barrel, resembles Walther MPK. That keeps the receiver length down to a minimum without resorting to bullpup configuration. Unlike the MPK, Stribog uses an extruded aluminum rather than stamped steel receiver. A much simpler form, it is also much stronger thanks to the internal reinforcing rails. This use of folded rather than flat parts is a prevailing theme with Stribog: the ambidextrous bolt stop/release levers are also made as a mostly closed form for greater rigidity without additional weight. The serialized upper attaches to glass-reinforced polymer lower with two captured pins. The overall weight of the pistol is just over 5 pounds.

Despite firing from a closed bolt, Stribog is more than a pound lighter than MPK, and as short, while mounting a longer 8-inch barrel. Everything about SP9A1 design is optimized for production, maintenance and speed of use. The bolt is a simple squared off reciprocating mass with a similarly simple bolt face and firing pin channel underneath, very simple to manufacture. Fieldstripping is done by punching out one captive pin in the back of the receiver to hinge the upper receiver forward to expose the backplate for installing a stock or an arm brace. The backplate is pressure fitted in place, and slides down with a tap of a rubber mallet to expose the inside of the receiver. On disassembly, the bolt slides out as unit with the recoil spring and guide, a guide rod and a double rubber recoil buffer. Further disassembly is usually unnecessary.

All controls are either ambidextrous, like the magazine releases, rotary safety levers and bolt stops, or reversible, like the non-reciprocating charging handle. Left-side mag release is just right for retaining magazines, while the right-side assumes drop-free magazines...but its transparent polymer magazines usually don’t drop free when empty. That may change next year, when metal-reinforced magazines come to the market. The two bolt stops are stamped as a unit and have generously sized finger shelves, making locking or releasing the bolt very easy. Articulated up and down, and properly fenced against accidental activation, the bolt release doesn’t activate accidentally when the...
weapon is placed flat on a surface. As with AR15, locking in a fresh magazine places the left hand perfectly for closing the bolt to chamber the first round. Everything about Stribog feels robust and streamlined for rapid deployment. Charging the weapon from a closed bolt requires only a moderate effort thanks to relatively light recoil spring and properly dimensioned charging handle, a welcome difference from many small blowback guns. Since the bolt locks open on an empty magazine, bringing it back into action takes but a left thumb twitch. Enlarged trigger guard works with bulky gloves. The flared pistol grip is well textured but not abrasive. Combined with a brace, it enables comfortable and accurate one-handed firing if necessary.

Stribog comes with non-adjustable folding post and ghost-ring sights, well designed, non-glare. The front sight is inside a protective ring. When folded flat, the sights present smallish post and notch sights useful for firing the gun in the pistol configuration. Upgraded metal or metal adjustable sights are available from Grand Power EU, but the full-length Picatinny rail on top of the gun makes it more likely that the users would apply the same money to mount an optic and keep irons as backup. The iron sights are quite low, so they can be used through skeletonized scope or red dot bases, so AR-height sights would be more comfortable. Since factory-regulated sights seldom line up with actual point of impact, I was pleasantly surprised to be able to hit a silhouette past 100 yards with them.

Accuracy is one of Stribog’s strong points: with iron sights or red dot, I got almost exactly 4MOA with all loads from 90-grain frangibles to 185-grain subsonics. A slightly magnified optic, like a 1.5x compact ACOG, is recommended to take full advantage of the available accuracy. With a 2x scope, 2MOA groups were routine, suggesting that the mechanical accuracy is better than my ability to align unmagnified sights consistently. Unlike most 9mm carbines, Stribog doesn’t shoot light bullets more accurately than heavy. That’s great news for suppressed use, and also for extended ranges – heavy subsonics might have a steeper trajectory, but they retain more energy past 25 yards and are much less susceptible to wind drift. Loads used for testing were Federal Syntech Action Pistol 150-grain polymer coated “flying lipstick,” Fiocchi 115-grain FMJ, Georgia Arms 115-grain FMJ, wide hollowpoint SIG 124-grain, 100-grain SBR frangibles, 185-grain Seismic plated HP and a few rounds of every other 9mm ammunition I could find. All types of ammo fed equally reliably. At this time, I am well over 850 rounds with no cleaning, about half fired with a sound suppressor: no malfunctions. While the Stribog’s trigger feels heavy at over 5 pounds, it doesn’t seem to get in the way of delivering accurate fire. The trigger mechanism is partly inter-
changeable with AR15 parts, so it can be lightened if desired. The long magazine well holds the mag securely enough to rest the gun on the floorplate for prone without causing malfunctions. The medium-weight barrel retains accuracy even when warmed up, which it does very slowly. The well-ventilated forend has a bottom Picatinny rail for accessories, not to include a vertical foregrip on the pistol variant due to NFA restrictions. A white light can be mounted close enough to the muzzle to avoid occlusion of the light beam. The long top rail permits placement of night-vision devices in front of the optic if desired. In addition, two M-Lok slots are available on each side of the forend.

Reliability, in general a feature of Jaroslav Kurachina’s designs, is predictably excellent. In over a thousand rounds of all kinds of ammo, half of it fired with a sound suppressor without cleaning or re-lubricating afterward, SP9A1 has had zero stoppages of any kind. Between superb ergonomics and perfect reliability, this gun really gives confidence to the user! Ballistic performance from the 8-inch barrel is close enough to maximized for 9x19mm, with very little muzzle flash even with the hypervelocity loads. With 115- to 124-grain bullets, Stribog adds at least 100 fps to muzzle velocity over a typical service pistol. The weapon is suppressor friendly, with the muzzle factory threaded 1/2x28. A little blowback can be felt with the can on, something that the A3 variant expected in the US by late 2019 solves. If you do not run it sound-suppressed, I would recommend Kaw Valley Precision’s linear compensator to divert the report more towards the target, away from the shooter. Especially when used with 185-grain Seismic HP ammunition, it cuts down the muzzle blast considerably for a more comfortable experience and reduced hearing damage in case of a precipitous firefight.

Retail price is very reasonable at $699. Global Ordnance ships this pistol with three 30-round magazines. Lightweight-but-sturdy magazines are very easy to load by hand. At $30 each, additional 30-rounders are a good deal. Various braces are well worth the little they add to the price. Having shot it both with fixed single tube and two collapsible struts, I am a fan of the more flexible collapsible variant. Both are compatible with various braces. Gear Head Works Tailhook (gearheadworks.com) seems to be the most compact and robust option. The pistol ships with two backplates, one set up for a tube and one for a braceless, pistol-grip-only configuration.

Compact dimensions, good balance and excellent ergonomics make Stribog an easy gun to shoot unsupported: hits on a silhouette from standing are easy past 100 yards. It’s been a strong favorite with my range visitors and models. Well calculated spring and bolt weight ratio, along with the double rubber recoil

**Wise Company’s “Grab & Go” Emergency Food Kits**

Wise Company’s 18 Wise Favorites 72-Hour Kit includes six entrées and three breakfast meals, each individually packaged for a total of 18 servings (2 servings per pouch). Entrées include meat. Packages included have a shelf life of 7 years compared to those in our buckets with a shelf life of 25 years. Great for hunting, camping and hiking! Simple to prepare, just add boiling water directly into pouch.

Wise Company’s 60 Serving Gourmet Freeze Dried Meat “Grab & Go” Food Kit includes 60 servings of assorted gourmet-seasoned freeze dried meat and a 20-serving bonus of long-term emergency rice, for a total of 80 servings. **Product within this Bucket is:** Roasted Chicken (12 servings), Teriyaki Style Chicken (8 servings), Cheesy Beef (8 servings), Southwest Style Chicken (12 servings), Savory Roasted Ground Beef (12 servings), Stroganoff Style Beef (8 servings), and Long-Term Instant Rice (20 servings).

Wise Company’s 120 Serving Freeze Dried Vegetable and Sauce “Grab & Go” Food Kit includes 120 servings of vegetable and sauce assortment. **Product within this Bucket is:** Corn (24 servings), Peas (16 servings), Broccoli (24 servings), Green Beans (24 servings), Butter Sauce (8 servings), Cream Sauce (8 servings), Cheese Sauce (8 servings), and Mushroom Sauce (8 Servings).

Wise Company’s 60 Serving Gourmet Entrée Only “Grab and Go” Food Kit includes two servings per day (entrées only) for one adult for one month or four adults for one week. **Product within this Bucket is:** Savory Stroganoff (8 servings), Cheesy Beef (8 servings), Southwest Style Chicken (12 servings), Roasted Chicken (12 servings), Teriyaki and Rice (8 servings), Creamy Ala King and Pasta Rotini (8 servings), Cheesy Lasagna (4 servings), Creamy Pasta and Vegetable Rotini (8 servings), Cheesy Lasagna (4 servings), and Mushroom Sauce (8 Servings).

Wise Company’s 120 Serving Breakfast Only “Grab & Go” Food Kit includes 120 servings of breakfast assortment (no entrees). **Product within this Bucket is:** Apple Cinnamon Cereal (40 Servings), Crunchy Granola (40 Servings), Brown Sugar and Maple Multi-Grain (40 Servings).

Wise Company’s 120 Serving Freeze Dried Fruit and Snack “Grab & Go” Food Kit includes 120 servings of fruit and snack assortment. **Product within this Bucket is:** Bananas (16 servings), Strawberries (16 servings), Peaches (16 servings), Apples (16 servings), Caramel Sauce (16 servings), Yogurt (16 servings), and Pudding (16 Servings).

**Traveler’s Guide**

...to the Firearm Laws of the Fifty States – The myriad of firearm laws facing the gun owner of the early 21st Century can be intimidating when traveling.

**Individual First Aid Kits From The Tactical Medic**

Nobody likes to think about it, but should a serious hunting/shooting accident occur, chances are the drugstore “first aid kit” you have stashed under the seat of your truck won’t do much good. That’s why we’re offering individual first aid kits from The Tactical Medic. The Econo-IFAK contains a 4” Emergency Bandage, a TK-4 Combat Tourniquet, 1 Package of Rolled Gauze, 1 Roll of Medic’s Tape and 1 Pair of Nitrile Gloves. The Micro Kit #2 contains a 4” Pressure Bandage, 1 Package of Quick Clot Gauze, a TK-4 Combat Tourniquet, 1 Roll of Medic’s Tape and 1 Pair of Nitrile Gloves. Econo-IFAK (at right in photo) P44-43379 $15.00 Micro Kit #2 (at left in photo) P44-43378 30.00

buffer in the back of the upper receiver all add up to moderate felt recoil. Thus far, Polish Railway police and Cape Verde SWAT officially adopted it. An updated A3 version with a remarkably simple roller-delayed blowback action has already been developed in 9mm Luger and 10mm Auto was recently a strong contender in the US Army PDW competition. Compared to the MP5 design, SP9A3 accomplishes the same goal with a single pin moving inside a bolt raceway. It is expected to be available from Global Ordnance by the end of 2019. The main benefits will be reduced felt recoil and delayed unlocking in suppressed use to reduce already minimal gas blowback. As it is currently configured, Stribog would be my personal first choice for a defensive 9mm sort-of-pistol, complimenting a GP Q100 or K100 pistol in the same caliber. Its ergonomics and reliability are excellent out of the box, and it doesn’t require frequent cleaning. The price is right, too. Its main competitors are SIG MPX, which delivers lower felt recoil and similar accuracy, but requires more maintenance, and CMMG Banshee, which also has less felt recoil but trades off some accuracy in the pistol configuration. Both alternatives cost significantly more than the Stribog.

Global Ordnance LLC
2150 Whitfield Avenue

globalordnance.com

Clockwise from above: 1. The molded polymer lower is very ergonomic, providing easy access to controls and has good texture for retention without abrasion. 2. Extruded aluminum receiver is corrugated for strength. Flip-up rear sight is in the deployed position. 3. Super simple one-piece bolt overhangs the barrel for compactness. 4. Unlike single-feed GLOCK magazines, Stribog mags load easily without any mechanical assistance. Polymer-coated Federal Syntech 150-grain carbine ammunition proved to be an excellent match for this gun.
There’s a little real life superhero in all of us. Whether we have officially pledged to protect and defend...or if we are primarily concerned about the welfare of our loved ones...or if we just want to be prepared for any emergency. But, in order to be the best superheroes we can be, it’s critical that we choose the very best tools that we can use, when needed, with ultimate effectiveness and confidence. We have some super solutions.

Les Baer Custom is the unchallenged leader in the design and production of custom 1911 pistols. More than a quarter-century ago we introduced state-of-the-art manufacturing methods, real hand assembly, and the use of top of the line accessories and other enhancements to ensure that our custom 1911s deliver the very highest standards of quality and performance. With multiple barrel lengths, frame sizes, several popular finishes and a choice of five calibers, there are more than forty Les Baer Custom 1911 models from which to choose, so you are sure to find one for virtually any purpose or preference.

No matter what kind of superhero you are.

Some of our most popular models include:

- **Baer 1911 Premier II©**, 5” or 6”  .45 ACP, 9mm, 10mm, .38 Super, .40 S&W
  - The flagship of the Baer Custom line, now available in four calibers, two barrel lengths, and multiple variations.

- **NEW! Baer 1911 GUNSITE Pistol, 5”** .45 ACP
  - In honor of America’s premier shooting academy.

- **NEW! Baer 1911 KENAI Pistol, 5”** 10mm
  - The only 1911 pistol that honors the Great State of Alaska.

- **Baer 1911 BOSS .45, 5”** .45 ACP
  - A high performance tribute to the 1970s muscle car that inspired it: The Boss 429 Mustang.

- **Baer 1911 Black Bear, 4 1/4”** 9mm
  - Perfect compact carry size with shortened slide. 9mm chambering for increased capacity.
