Your VOTE Has NEVER Been More Important!
THE FINEST 1911 INTERCHANGEABLE OPTIC SYSTEM

The World’s Finest Custom 1911 Pistols

DTS
BY NIGHTHAWK CUSTOM

1911 DROP-IN TRIGGER SYSTEM

- Fits most quality in-spec 1911s and 2011s
- Trigger pull: 3.5 - 3.75 lbs (will vary based on your mainspring weight)
Which Dillon is Right for YOU?

**Square Deal B**
Our automatic-indexing progressive reloader designed to load moderate quantities of common handgun calibers from .32 S&W Long to .45 Colt. It comes to you from the factory set up to load one caliber.

**RL 550C**
The World's Most Versatile Reloader, capable of loading over 160 calibers. An automatic casefeeder is available for handgun calibers. Manual indexing and an optional magnum powder bar allow you to load magnum rifle calibers.

**XL 750**
Truly the state of the art, our XL 750 features an optional automatic indexing, an automatic casefeeder and a separate station for an optional powder-level sensor. Available in all popular pistol and rifle calibers.

**Super 1050**
Our highest-production-rate reloader includes a swager to remove the crimp from military primer pockets, and is capable of reloading all the common handgun calibers and several popular rifle calibers.

**RL 1100**
Our newest reloader features an innovative eccentric bearing drive system that means smoother operation with less effort, along with an upgraded primer pocket swager. Loads up to .308 Win./7.62x51 cartridges.

**WARNING:** The products offered for sale in this catalog can expose you to chemicals, including Lead, which are known to the State of California to cause cancer, birth defects or other reproductive harm. For more information, go to [www.P65Warnings.ca.gov](http://www.P65Warnings.ca.gov).
ATTENTION DILLON CUSTOMERS: Because of changes to California’s Proposition 65 that took effect on August 30, 2018, companies doing business in California are mandated to provide warnings on products that may expose Californians to any one or more of a list of approximately 900 chemicals, including Lead, which are “known to the State of California to cause cancer, birth defects or other reproductive harm.” The new regulation states that a warning must be “provided in the catalog in a manner that clearly associates it with the item being purchased.” Though we have no reason to believe our products could cause harm when used as intended, we now include the appropriate Proposition 65 warnings on some of our products to meet the California “safe harbor” requirements.
Dillon’s HP1 Electronic Hearing Protector amplifies weak sounds while at the same time blocking out loud, harmful noise. During loud noises, the HP1 maintains a comfortable level of sound transmission – HP1 Hearing Protectors are designed to never completely shut off. The Dillon HP2 Folding Hearing Protector is comfortable to wear for extended periods and folds for easy storage when not in use.

**Bomber Glasses**

Bomber Glasses’ lenses and frames are made from High-Index Polycarbonate that is durable, flexible and impact resistant. All colors provide UV protection.

Dillon’s First DEDICATED Case-Processing Machine!

- Eccentric Roller Bearing Drive System
- Smoother Operation, Less Effort
- Higher Throughput, Lower Cost Per Case
- Heavier Frame for Greater Rigidity
- Seven Threaded Stations for More Flexibility
- Upgraded Primer Pocket Swager
- Primer Pocket Swage Available in Two Stations
- User-Replaceable Swage Rod Tip
- Reinforced Toolhead Bolt & Washer
- Improved Shellplate Indexing System
- Processing Speed up to 2000 Cases Per Hour

Designed to complement our RL 1100 and Super 1050, the CP 2000 offers higher speed, greater versatility and added case processing capability...all at a much lower cost than dedicating a RELOADING machine to prep brass!

If you’re loading mass quantities of ammo, the CP 2000 will make your task MUCH easier.

**$1599.99**

Rapid Trim 1500 Case Trimmer

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (Vacuum cleaner and hose not included.) The RT 1500 is equipped with a quick-disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer P82-62164 is $349.99. (Available only in 110 volt 60 Hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, P82-13141, are $20.99 each. Upper lock rings, P82-13559, are $6.99 each.

MILITARY BRASS?

Eliminate the “Grunt Work” with Dillon’s Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won’t be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What’s more, it’s inexpensive. The Super Swage 600 comes with large and small swage rods.

- 6.8 SPC Back-Up Rod P82-62124 $22.99
- 9mm Adapter P82-62168 16.99
- .40 S&W Adapter P82-62169 16.99

Compact Survival

By Frank Jardim

In the world of survival arms, the TNW Aero Survival Rifle (ASR) is the stand-out leader in practical multi-caliber versatility. It’s a takedown, making it extremely compact and easily stored; can be put together or taken apart in a minute; has a remarkable ability to return to a predictable zero; is very rugged and simple in construction; is designed for long term child-safe storage; and attenuates recoil, making it easy to shoot well. It is convertible to seven calibers: .22 LR, 9mm, .357 SIG, .40 S&W, 10mm, .45 ACP, and powerhouse .460 Rowland. Depending on the caliber your gun is configured in, the conversions require an additional barrel and magazine, and sometimes an additional bolt head and/or a trigger group/magazine housing. The 16” barrel carbines developed a loyal following and customers clamored for a pistol version. TNW delivered.

The even more compact Aero Survival Pistol (ASP) is 23.25” and weighs only 4.6 pounds. It’s exactly the same gun as the carbine, except, instead of a butt-stock, it has an SB Tactical arm brace slid over a plain round buffer tube; and its standard barrels are 10.25 inches with an extended ventilated handguard. Other lengths are available on request.

To keep the brace from sliding up or down on the round buffer tube, I found a few wraps of black electrician’s tape around the tube formed an excellent stop to hold the brace in position. While some would consider any brace a hindrance to accurate shooting, at pistol-caliber ranges, my assessment is that you are giving up very little in term of functionality with the SB brace anchored with humble tape. In fact, a clever survivalist would probably make that “tape stop” by winding 10 yards of quality duct-tape there instead. Nobody has ever said, “Man, I wish I DIDN’T have duct-tape.”
The most important advantage to the ASP, in my view, is it offers greater legal flexibility in assembling your emergency kit. Specifically, it’s perfectly legal to put the carbine’s 16” barrel on the pistol, but you can’t but the pistol’s short barrel on the carbine without registering it on a BATF form-1 and paying the $200 tax for an SBR (Short Barreled Rifle). Consider these basic formulas: Long-barreled pistol = improved velocity and long-range accuracy. Unregistered short-barreled rifle = felony arrest.

The ASR/ASP is also adaptable for right- or left-side ejection, uses common GLOCK-pattern magazines, and is maintained without tools. Because all the barrels mount in one tubular aluminum receiver, only one set of sights is needed. What most impresses me about the ASP’s design is how the various caliber barrels will return to their established zero again and again and again. In testing at 25 yards, I could find no noticeable change of impact regardless of how many times a barrel was taken off or re-installed.

TNW set out from the start to make a takedown gun that didn’t need to be sighted-in every time it was put together. They found an eloquent solution that, in its simplest manifestation, is comparable to pair of stacked orange traffic cones. The ASR/ASP barrel and receiver are self-centering, the exterior of one surface mating with the interior of another identically shaped. A pressed-in steel guide-pin in the receiver keeps the barrel oriented when tightening the ratcheting barrel nut. The nut is mounted inside the handguard, and attached to the barrel itself, to form a single, easy to handle unit.

For extra strength and safety in the event of a ruptured cartridge case or overcharged handload, TNW designed a heavy, recessed breech on the barrel that completely encases the front of the bolt head when it’s in battery.
The ASR/ASP is held together with tensioned pins that are easy to remove with an improvised punch. If this has a downside, it’s that these pins can be easy to lose if you have butterfingers. Fortunately, they are neither expensive nor hard to locate in the hardware store. Bolt heads are noticeably loose at the connection point to allow them to self-align with the chamber when chamring a round.

To save weight, the receiver, trigger group, buffer tube and barrel nut are aluminum. The barrel, bolt head, bolt carrier, and buffer are steel. Trigger groups come in three sizes to accommodate the various calibers. The one that fit the 9mm size GLOCK magazines handled .22LR, 9mm, .357 SIG and .40 S&W. The one for .45 ACP GLOCK magazines handles that round, 10mm and .460 Rowland. Except for the size of the magazine well and the position of the extractor and bolt stop, they are identical. Any AR pistol grip without a beavertail will fit. The front of the receiver and the handguard are drilled and tapped to mount additional sections of rail if you feel the need to accessorize. For me that meant a Crimson Trace tactical light.

The ASR/ASP is a straight blowback action. Getting a heavy spring to balance such a broad range of calibers is quite an accomplishment in itself. It helps to diminish recoil, but it requires a little muscle to cock. Some ammunition can be too weak to cycle properly which can cause failures to feed and eject. You can tune the spring to your favorite ammo by removing a half coil at a time until reliable function is restored, but this will increase the bolt’s recoil velocity and increase felt recoil. Don’t worry about it damaging the receiver. There’s a phenolic bumper inside the buffer tube to stop it. TNW reports that most failures to feed or eject with the ASR were attributable to ammunition of inadequate power.

I tested accuracy initially at 25 yards, shooting with the 9mm barrel from a bench rest with a SIG Romeo red dot optic, and produced average five-shot groups of 1.56”. To my delight, at 50 yards, with Black Hills 9mm+P 124-grain JHP, my groups averaged 2.34”. I have 16” barrel carbines that don’t shoot that well! In rapid-fire tests at 7 yards, from a standing, offhand, position, the TNW pistol delivered 1.88” groups. The ASP’s action had a smooth feel in operation and no spring twang like you typically find in AR pistol-caliber carbines.

The 9mm ASP retails around $699 and conversions cost about $199. You can get a package deal on a pistol with any three caliber combinations for $1,199 which includes a specially designed, 3-day-size bug-out bag to comfortably carry it and your emergency gear.

**Case Preparation Equipment**

**CV-2001 – The Industry Standard**

Dillon’s CV-2001 Vibratory Case Cleaner is one of the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour. Not only is our capacity greater than most, but our motor is also larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no “hobby” machine! The bowl and base are constructed of 7/32” thick injection molded high-strength polypropylene which is impact and abrasion resistant.

**Case/Media Separators**

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media. We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners. The solution was an injection molded reversible part. Simple, and it works great. Our device is large, 10” x 14”, and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18” x 22”. The tub keeps the mess off the floor and bench. It’s fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

**Limited Work Space?**

Dillon’s introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit. Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

**Rapid Polish 290** is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You’ll use less each time you clean your cases.

**Dillon’s D.C.L. non-aerosol case lube** is easy to use. Simply lay your cases out, spray lightly with one or two passes and you’ve done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge cases and you’re ready to load. Try a bottle. You’ll never use a grease pad again.

**PRIMER FLIP TRAY**

A heavy, high-quality tray large enough for the Federal primer package.

P82-13606, $23.99 ea.
**Sizing/Depriming Die (Pistol)**

Our sizing/depriming dies feature a “floating decap assembly” with a snap spring that keeps the primer off the pin and eliminates the primer “draw back” that occurs when decapping military brass. The primary feature of Dillon's size die design is the long, tapered carbide ring with a radiused opening. That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother — but that's still only a part of the story.

**Bullet Seating Die (Pistol)**

Our quick-disassembly seat die allows the user to disassemble and clean the seating die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a “flip-flop” seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem. Dillon's double-ended design makes it simple to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time.

**Crimp Die (Pistol)**

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

---

**Sizing/Depriming Die (Rifle)**

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for “squeak-free,” effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

**Bullet Seating Die (Rifle)**

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

**Taper Crimp Die (Rifle)**

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksmen.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Mr. Bulletfeeder®

Mr. Bulletfeeder has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy – a world leader in practical-shooting-related product manufacturing and distribution – at the helm. The design allows the bullet collar to be mounted onto the casefeeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

P82-13606, $23.99 ea.
1. First gun you ever fired?
Chris: Winchester Model 190 .22 rifle.
Hunter: Colt Commander 1911.

2. What’s your favorite gun?
Chris: My GLOCK 34 with an Aimpoint ACRO red dot.
Hunter: A.M.F. Defense Smith & Wesson MP9 2.0 5”.

3. Do you have any rituals before you shoot?
Chris: Both for duty life as a cop or firearms instructor, I verify all of my equipment is in working order before work or training.
Hunter: Perform a thorough visualization of the stages: targets, movements, reloads, etc. Set yourself up for success.

4. How many rounds a year do you shoot on average?
Chris: 15,000 give or take two thousand.
Hunter: 40,000.

5. Most useless thing you own?
Chris: A GLOCK 22. LOL
Hunter: Backpack flamethrower with a 110-foot range.

6. What else do you do for fun?
Chris: I enjoy time well spent with my family and closest friends.
Hunter: Hunting. Cooking. Hiking. Fitness is also a large part of my life, from hitting the gym to the yoga studio.

7. Favorite place on Earth?
Chris: Florida keys.
Hunter: Anyplace with my family or on the range.

8. Most annoying thing about you?
Chris: I misplace everything.
Hunter: My personality.

9. Craziest thing you’ve ever done?
Chris: None of your business! LOL
Hunter: I’ve done a lot of crazy things, but I’ve hit my head too many times to remember.

10. Dream job?
Chris: Livin’ it – I’m a full-time SWAT officer and I get to travel the country on my off time teaching shooters as an instructor for Fieldcraft Survival.
Hunter: There isn’t one specific job that I could see myself doing the rest of my life. I like being constantly challenged.
Know and working toward entrepreneurial goals. I’m currently part of the marketing team for Fieldcraft Survival, a firearms instructor and professional shooter. That being said, be sure to check out Fieldcraft Survival on social media! 
@fieldcraft_survival @fieldcraftmobility @fieldcraftsurvivalfit

11. Who has inspired you the most?
   Chris: My old team sergeant, Joel Slough. He’s my former boss and I consider him my brother.
   Hunter: Three of my family members: My Mother, Cally; my Aunt, Nikki; and my Uncle, Bruce. These three people have taught me what you can achieve when you apply discipline and hard work to anything in life, as well as having a strong moral code to stand by. I love them dearly.

12. Who would play you in a movie?
   Chris: Some would say Vin Diesel, others would argue Danny DeVito.
   Hunter: Shia LaBeouf.

13. If you could have a conversation with anyone from the past, who would it be?
   Chris: Winston Churchill over a Smoked Old Fashioned with a Padron 1926 cigar.
   Hunter: Teddy Roosevelt. He was one of the United States’ original badasses. His first priority was to protect national parks and forests. He was the youngest President. I would love to hear his perspective on the current state of our nation as a patriot and conservationist.

14. Who’s in your regular crew?
   Chris: My circle is more linear these days. My crew knows who they are.

15. Words to live by?
   Chris: Everybody misses – you just can’t miss when it matters.
   Hunter: Live with purpose, work hard. You determine your own success.

Dillon's RL 550 has long worn the title of “The World's Most Versatile Progressive Reloader,” and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles. The BL 550 is essentially an RL 550 without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550 – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550 loader! The interchangeable toolhead (Page 25) makes it quick, easy and inexpensive to change calibers. The additional toolheads are $27.99 each, or $25.99 each if you buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you’ll never have to re-set them. A powder measure adapter is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it’s easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

**AUTO PRIME SYSTEM**

Allows you to focus on loading instead of worrying about failing to seat a primer, and is an easy slip-on attachment to the auto prime system.

**PRIMER SYSTEM EARLY WARNING**

P82-16627 $94.99

**AUTO POWDER SYSTEM**

Accurate to within 0.1 grain, our Automatic Powder Measure is world renowned for its charge-to-charge consistency.

P82-20251 $99.99

**OPTIONAL MAGNUM RIFLE POWDER BAR**

P82-21353 $34.99

**AUTO EJECT SYSTEM**

Greatly increases your ammo production capabilities and adds a Cartridge Chute/Bracket and a Cartridge Bin to your reloader.

P82-22120 $35.99

**BL 550 POWDER DIE**

Extra powder dies for your BL 550 make it easier to set up additional toolheads for loading different calibers.

Powder Die: P82-16629 $21.99
Oversize Die: P82-16626 21.99
Plastic Funnel: P82-16617 7.99

**POWDER MEASURE ADAPTER**

If you load rifle cartridges with long-grain extruded powder, you can now use any manufacturer's powder measure with 7/8" x 14 threads on your RL 450, AT 500, BL 550 or RL 550. (Requires the use of an RL 450 powder die – see below.)

P82-20029 $26.99

Dillon's shooting mat is made of tough ballistic-weave nylon fabric, with a large skid-resistant elbow pad area. The “ground” side is moisture resistant and wipes clean easily. The padding is dense, closed-cell foam to provide both shooter comfort and a stable shooting base. The mat is equipped with a shoulder strap, a carry handle and two straps with snap-release buckles.

Dimensions: 66” x 27.75”

Dillon Reloading Accessories

Our Toolholders are available for your reloading machine and ensure that the tools you need to service your reloader are handy and organized. No more digging around your bench trying to find the right size hex wrench!

Strong Mount increases your machine’s “footprint” to over 10”, spreading the load over the whole bench instead of stressing the leading edge. For XL 750/650 owners with limited overhead clearance, the XL 750/650 only mount raises the machine 6” above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

Our Bullet Tray is a simple, shallow aluminum tray designed and located for economy of motion. Our tray works on the Square Deal “B”, RL 550 and XL 750/650 when equipped with the RL 550/750/650 Strong Mount, and a separate kit is available for the RL/Super 1050.

Bullet Tray Kit
- P82-22214 $47.99
- P82-22215 $47.99

The Low Powder Sensor provides an audible and visual reminder when it’s time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

P82-16306 $44.99

Our Toolhead Stands for the RL 550 and XL 750/650 make it easy to tell at a glance which caliber you’re set up to load.

An Aluminum Roller Handle gives your reloader an entirely new “feel,” reduces operator fatigue, and makes primer seating easier.
P82-17950 $49.99

Dillon’s “Belted Magnum” Powder System features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus or minus three-tenths of a grain.
P82-97126 $169.99

The Powdercheck System (available for XL 750/650 and Super 1050 reloading machines) sounds an alarm if the powder charge in a round is out of limits either high or low.
P82-21044, $71.99 each
Three or more, $65.99 ea.

Dillon’s 1” Bench Wrench fits our 1” Die Lock Rings which give you more space on the toolhead.
P82-10842, $9.99 each
Two or more, $8.99 ea.

Our Machine Maintenance Kits come with everything you need to keep your Dillon loader cleaned and lubricated up to factory specifications. Available alone or in combination with a spare parts kit for your machine.

Blue Press 33
The **Shellsorter** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **Shellsorter** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **Shellsorter** is made of ABS, a strong plastic that will give a lifetime of service.

**Berry's Mfg.**

## Lyman Products

**Lyman’s Precision Funnel Set** is the ideal system for the serious reloader. The Precision Funnel Set is made to be completely static free, with a body of die-cast aluminum and precision-turned aluminum inserts. This is no “one size fits all” funnel; the Precision Funnel Set uses precision-machined, caliber-specific inserts to properly fit the case neck. The inserts can be quickly and easily installed by simply pushing them into place and then pulling them out when changing calibers. The Precision Funnel Set also comes with a padded storage case that neatly stores extra inserts when not in use. The set includes inserts for .22, .243/6mm, .25/6.5mm, .270/7mm, .30 and .338 caliber rifle cartridges.

Lyman Neck Expander Die

Improves accuracy of cast and jacketed bullet reloads. Extends case life. A “Must-Have” die for the cast bullet or flat-base bullet user. The first step expands the inside of the case neck to just under bullet diameter for precise case neck tension in the finished reload. The second step expands the case mouth to bullet diameter or slightly over. This allows the jacketed or cast bullet to be started perfectly centered in the case mouth and properly aligned with the axis of the case neck. By adjusting the plug slightly deeper, the second step also provides a slight flaring of the case mouth for reloaders using cast bullets.

Dillon AkroBins

- AkroBins are ideal for reloaders who load several calibers, bullet weights, bullet shapes, etc. We’ve been including these bins with our machines for years, and now we’re stocking them in quantity for our customers.
  - The small bins (the ones we use as Square Deal “B” cartridge bins) are 4-3/4” long x 3-7/16” wide x 2-13/16” deep.
  - The RL 550/XL 650/750 cartridge bins are 6-3/4” long x 3-7/16” wide x 2-13/16” deep.
  - The 1050 bins are 10-1/4” long x 4-3/8” wide x 4-3/4” deep.
  - The double-extra-large bins we use on our SL 900 measure 13-3/4” long x 6-1/2” wide x 6-3/4” deep (all inside dimensions).

- AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They’re virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang ‘em, stack ‘em, rack ‘em and fill ‘em – you just can’t beat ‘em! Buy several and get your “stuff” together.

Blue Press 37
The biggest threat to your fundamental right – your right to keep and bear arms – may not be what you’ve always feared. It may not be new laws. The risk may not even be from the two main political parties, though they both need constant watching, as Thomas Jefferson and the Founding Fathers warned.

No, the threat may be coming from something we were keenly alerted to back in the 1950s and 1960s, which we’ve grown inured to, bored with, discarded onto history’s trash heap. We may have forgotten it as a guns-and-ammo threat, but it’s still there. As alive as ever, active as ever, working its nefarious magic, seeking to take every gun you own, every round of ammunition you possess, either by direct force or through subversive covert action. That enemy is our old friendly villain, Marxism and communism, now in control of fully one third of the world’s population and making inroads here. Mass media, infected with that scourge, is not alerting us. They hide it, disguise it, aiding and abetting a mortal enemy of our Republic.

Thomas Jefferson warned, “Be eternally vigilant” to preserve freedom. He could never have imagined an enemy like Karl Marx. The rioting, looting, arson and upheaval we have WITNESSED on our televisions every night, is being run by dedicated Marxists with announced plans, signage, upraised fists. They make no secret of it. Class warfare. Call it “racism” if you want, but that’s not it, we are as free from racism as any nation you can name, which is why American immigration is basically a one-way street – inbound. No one is breaking into Cuba, China, Africa or lining roadways escaping the United States. These nightly mobs have communist influences and international provocateurs at their heart. Leaving you armed to resist is not their plan.

In fact, leaving your police armed to resist is not the plan either. Stop and think. Could true Democrats or Republicans support any version of eliminating armed police, abandoning swaths of cities to mobs? No. They have been overwhelmed by a mindset, a propaganda wave, a core tool of communism. The very brainwash that turned 5,000 years of a brilliant Chinese empire’s art, music, religion, history, culture and the rest, into a monolithic, terrified, follow-the-leader brutal dictatorship is here, proposed right now, in your face.

The proof is in writing, in Congress (HR5717), and the Senate (S3254). While our primary gun-rights networks have been distracted with familiar lists of horribles – these bills have them all – the real gun bans are more subtle, more total, and more devastating than anything our enemies ever presented before.

You’ve heard these before. Sure, it’s not good. At least it’s familiar, mostly:

- AR-15 Confiscation
- AR-15 Lookalike Confiscation
- Ammunition and Magazine Limits
- Shopping Restrictions
- Carry and Loaded-Possession Bans
- Semiauto Bans
- Bans by gun type – Including guns with grips
- Taxation on Arms, Ammo, Accessories
- Registration Schemes
- Background Checks
- Personal Transfer Bans
- Private Sale Bans
- Gun Show Bans
- Training Restrictions
- A “Heller Ban,” Overturned in D.C. by the U.S. Supreme Court, no loaded or accessible gun at home unless under attack

- Plus, Joe Biden’s website calls for prohibiting teaching teachers about marksmanship and firearms.

THE REAL GUN BAN: PSYCH TESTS

None of that matters though. It’s a distracting smoke-screen – a diversion. Hidden in page after page of gun bans and conditions, no one will be allowed to have a gun or ammo at all – including anything you already own – without the new “comprehensive” federal gun license. That’s only issued at an official’s discretion.

Anti-gun legislators wrote this and put it in both houses of Congress, ignoring the fire it sets to the U.S. Constitution and the Second Amendment. Gun ownership under the anti-gunners’ control requires a psy-
chology evaluation. There is no indication who will conduct this, or how it might be appealed if unfavorable. An unelected federal board of decision makers will decide:

- Are you of “sound mind and character” (no standards described, to be Board determined later);
- Do you have “factors that suggest that the individual could potentially create a risk to public safety” (what armed citizen doesn’t potentially pose such a risk);
- Do you meet or fail to meet “any other requirements the State determines relevant” (to be set after elections, without any statutory parameters – completely arbitrary limitless control);
- And then authorities shall, “make a determination of suitability” for your ownership and possession of arms, including your own (in other words, firearms-ownership licensing at the federal level, with socialists in charge, if they are elected);
- These are written into the bill. In addition, authorities, “shall establish standards and processes by which licensing authorities can revoke, suspend, or deny the issuance or renewal of a covered license” required to possess firearms;
- The new required federal gun license, with mandatory written and shooting testing in addition to the psych tests, and numerous other conditions, applies to all guns you own or seek.

Gun-averse mass media has “overlooked” this. The Second Amendment is being changed from an unfringed right to a might-be-issued licensed and scrutiny under dictatorial control. Go ahead, say it: “They can’t do that!”

How can an armed electorate even resist this wild scene? The anti-gunners’ “representatives” are “with them.” Speak against them, they attack your principles. The few people standing up against this cultural revolution find themselves the ones facing “hate” charges – thought crime. Police are ordered to stand down! The ones who stand up are decommissioned, disbanded and defunded. It’s the socialist way. One election is all that stands between this and collapse of the Constitution.

In a quote attributed to then-Soviet-Premier Nikita Khrushchev from a speech in Bucharest, Romania on June 19, 1962, he predicted that “The United States will eventually fly the communist red flag. The American people will hoist it themselves.” Even now, our leaders propose funding Red Flag Laws (in HR5717/ S3254). Mass media and many citizens think that’s great.

“We do not impose our communist convictions by force on anybody. We believe that in America, too, mighty forces will grow – they already exist there and are growing and developing all the time. These progressive forces which are growing within the American people itself will ultimately win. In place of capitalism, which reigns in America today, the American people will themselves establish a new social system, and this system will be communism,” said Khrushchev again, from an interview with Gardner Cowles on April 20, 1962.

Controversy now surrounds whether Khrushchev actually said the following words, but they certainly describe what we see happening: “No, you won’t accept communism outright, but we’ll keep feeding you small doses of socialism until you finally wake up and find you already have communism…. We will destroy you from within.”

Huge doses of socialism have indeed been foisted on our nation while we watched in stunned silence: “I’m not a socialist, I’m a democratic socialist!” – Bernie Sanders, who ran for the presidency.

In 1963, communism’s 45 goals were put in the Congressional Record. These few lines illuminate the mob’s movement and threat to your guns and way of life:

17. Get control of the schools. Use them as transmission belts for socialism and current communist propaganda. Soften the curriculum. Get control of teachers’ associations. Put the party line in textbooks.
18. Gain control of all student newspapers.
19. Use student riots to foment public protests against programs or organizations which are under communist attack.
21. Gain control of key positions in radio, TV and motion pictures.
23. Control art critics and directors of art museums. “Our plan is to promote ugliness, repulsive, meaningless art.”

It’s Marxism, infecting America – as predicted – our guns’ and liberty’s greatest enemy.

Award-winning author Alan Korwin has written 14 books, 10 of them on gun law, and has advocated for gun rights for nearly three decades. See his work or reach him at GunLaws.com.

**50 BMG CASE TRIMMER ASSEMBLY**

Features an industry standard 1-1/2"-12 UNF threaded body, a 1/4 HP motor, replaceable carbide cutter, quick-disconnect cord and includes the .50 BMG trim die. P82-50050 $449.99

**50 BMG CARBIDE SIZE DIE**

The only .50 BMG size die in the industry that's a full-length solid carbide size die, for increased die life and scratch resistance. It also has a solid carbide expander ball, placed in the middle of the power stroke for easier operation. The die body is standard 1-1/2"-12 UNF thread, and is manufactured to low chamber tolerance specifications. P82-50075 $984.99

**50 BMG POWDER MEASURE ADAPTER**

For use with the RCBS .50 BMG powder measure. P82-50125 $109.99

**50 BMG PRIMER SEATING DIE**

One of these is included with Dillon's Big Fifty Reloader, but may be used as an accessory on a separate toolhead. The primer seating die is adjustable for enhanced control of primer seating. Includes two primer punches: one flat, match-style primer punch and one cupped, Mil-Spec primer punch. P82-50200 $189.99

**50 BMG PRIMER POCKET SWAGER**

Makes it easy to remove the military crimp. P82-50001 $379.99

**PRIMING CONVERSION**

Converts Swager to Priming System. P82-50003 $99.99

**50 BMG PRIMING SYSTEM**

Allows off-the-machine primer seating. P82-50002 $354.99

**1 SWAGER CONVERSION**

Converts Priming System to Swager. P82-50004 $99.99

**RCBS .50 BMG LOADING ACCESSORIES**

- .50 BMG Powder Measure P82-21896 $129.99

---

**“Big Fifty”**

**STANDARD FEATURES:**
- Made in the USA
- 4-Station Interchangeable Toolhead
- Uses Std. 1-1/2"-12 UNF Thread Dies
- Manual Shellplate Indexing
- Average Loading Rate: 500 Rds./HR.
- Loads High Volume/Match-Grade Ammo
- Milspec/Match-Grade Priming System
- Ductile Iron/Carbon Steel Construction

**All for ONLY...**

$1,499.99

It's interesting to me that many firearms that were essentially dead ends in their time in spite of their unique qualities have later become really hot items on the collector market. Even considering their contemporary lack of popularity and disappointing sales, many have become more well-known today than when they were on the market. Examples that come to mind include the S&W Straight Line single-shot pistol, the Colt Camp Perry target pistol, the Whitney Wolverine, the S&W Model 61 Escort pocket pistol, the Heckler & Koch VP and the High Standard Model 10B bullpup shotgun. All were innovative, relatively futuristic – and terrible flops. Now, every one of them also enjoys continuing high-spiraling prices when found. No less an example is the Ruger Hawkeye single-shot pistol. It was unique, performed well, and lauded in the gun press. However, in the end only a few thousand were ever sold in a scant two years of production. Today, examples of this gun are highly sought after and those in decent original condition are often commanding $2,000 or more, quite a jump over the initial list price of $87.50!

The how and why of the Ruger Hawkeye pistol is an interesting story. It began, as Ruger firearms usually did at that time, in the brain of William Batternan Ruger Sr. In 1960, he was the 44-year-old founder and driving force behind Sturm, Ruger & Co. and he was seriously considering a single-shot pistol based on the frame of the popular Ruger Blackhawk single action revolvers. What he wanted was a high-velocity small caliber gun that would be effective on varmints and small game out to around 200 yards. His inspiration was the development of the .256 Winchester Magnum round, which was essentially a .357 Magnum case necked down to accept smaller-caliber bullets. Unfortunately, although intended initially by Winchester for use in revolvers, this round did not perform well in wheelguns due to case setback of the bottlenecked round in firing. This often caused cylinder lockups – not a good thing. Ruger correctly understood that this problem would not exist in a single shot pistol. He began work with his chief engineer Harry Sefried, following experimentation that reaffirmed the .256 cartridge would be a disaster in revolvers. In addition to the case setback problem, the high pressures generated were sure to cause gas erosion at the barrel-cylinder gap. Accordingly, two special single shots were produced on Super Blackhawk frames that utilized a rotating breech block instead of the cylinder. Subsequently, after some mechanical and cosmetic changes were conceived, eleven prototypes of the new gun were completed in 1962. Some of these were shipped to various firearms publications for evaluation, and the feedback was quite positive. Photos of the prototypes were featured on the covers of a number of magazines in addition to positive articles, sparking predictable interest. The positive reactions convinced Ruger to go ahead and set up full-scale production.

Manufacturing of the Hawkeye began in late 1962. Shipping started in January 1963 and ended nominally in July 1964. Serial numbers began with 1 and ended at number 3296. However, only 3,073 were actually shipped, allowing for production rejects and other factors. A few remaining guns were shipped through 1974, when only 15 to 20 numbered receivers were still in factory inventory. The first advertisement for the Hawkeye appeared in the February 1963 issue of the NRA’s American Rifleman. The initial price sheet distributed in December 1962 was dated January 2, 1963 and the last one issued was dated January 4, 1965. The list price remained the same each year at $87.50; the factory stock number was RH28.

The new gun had some interesting features. The breechblock was rotated by pressing a spring-loaded lock on its left side forward with the thumb, at the same time pressing the upper part of the right side of the block to the left with the fingers. This rotated the block to the left. When so rotated, the right side of the block was pivoted aside to expose the cartridge chamber in the end of the barrel. A round could then be inserted there, and the breechblock counter-rotated to support the base of the cartridge. When the hammer cocked, a rectangular hammer nose was revealed. When the trigger was pulled and the hammer fell, this nose fell through a slot in the frame to strike the spring-loaded firing pin in the breechblock, firing the gun. When the breechblock was re-opened, the empty case could be extracted and ejected with an ejector rod very similar to those used on traditional single action revolvers. This rod had a terminal projection which engaged the rim of the case or cartridge to remove it.

A unique internal mechanism ensured that the hammer will not cock and the trigger cannot be pulled unless the breechblock is completely closed. When the breech is closed, the downed hammer is in a...
slight rebound position. When the hammer is cocked and the trigger is pulled, a sear block moves forward into a slot in the bottom rear of the breechblock, further locking it in place. Also, the rectangular nose of the hammer falls into a slot at the top rear of the block, making sure that it does not have a chance of rotating during ignition. It also makes sure that ignition is impossible unless the breechblock is aligned in its proper position. These important safety measures were well thought out mechanically.

All production Hawkeyes were equipped with 8.5" barrels, and those barrels were drilled and tapped just forward of the frame for a 1" scope base. Those two small mounting holes had slightly-projecting plug screws installed at the factory. A number of then-available long eye-relief low-power scopes could be utilized. The standard finish was blue. The frames were based on the configuration of the old model standard Blackhawk revolvers. Fully adjustable rear sights were standard. A slight change in the breechblock stop was the substitution of a fixed pin to replace the previous spring-loaded detent plunger. This change was implemented gradually around serial number 1500. Some brass grip frames were used, and some guns were factory fitted with the larger Super Blackhawk square-backed trigger guard type. Only XR3-RED rather than the earlier XR3 standard grip frames were used. The first production guns had steel ejector rod housings, while later housings (starting in mid-1963) were made of aluminum, anodized black. Some minor variations have been noted in the adjustable rear sights used. Walnut grips with black eagle logo medallions were standard. The gun weighs 45 ounces and measures 14.5 inches in length. Its ample weight actually makes it quite pleasant to shoot. An instruction sheet and parts list for the Hawkeye was included in each packing box.

This sheet had four successive drawings illustrating the gun's proper operation.

Initial and thorough testing showed that the Hawk-eye was a very accurate gun, and 5-shot groups at 100 yards averaged an extreme spread of less than 1 ¾". Instrumental velocity at 15 feet from the muzzle was measured at 2,350 feet per second from the 8.5" barrel with factory ammunition. The 60-grain bullet develops about 700 foot-pounds of energy at the muzzle.

The only other firearm at the time that chambered the .256 Winchester Magnum was a lever action rifle, the M62 Levermatic made by Marlin. There were a couple of competitors in the high-velocity small caliber handgun market. One was the Remington XP-100, which was essentially a truncated bolt-action rifle made as a handgun, with the barrel and action mounted in a futuristic stock that utilized the same Zytel plastic as Remington's Nylon 66 rifle. The XP-100 used the .221 Fireball cartridge, which was a slightly shortened round based on the .222 or .223 Remington cases. The other competitive handgun was a Smith & Wesson Model 53 revolver, which fired the .22 Remington Jet (a .22 caliber centerfire gradually bottlenecked cartridge), or with adaptive inserts, regular .22 Long Rifle rimfire cartridges.

As it turned out, the market for centerfire small-caliber high velocity handguns was less than expected, and none of the three guns mentioned exists in production today. The Hawkeye was the first casualty, probably because the cartridge it fired was an oddball that was not readily available on dealers' shelves. This remains very true today, and the .256 Winchester Magnum is only sporadically produced. Boxes of it are running around $70 a pop when you can find them, which makes the round mostly a handloading exercise.

Today, the Ruger Hawkeye pistol is a legendary classic, and Ruger collectors in particular will salivate when they can find and afford them. Hawkeyes are really not all that hard to find and will appear on auction sites with some regularity. The catch is the asking prices, coupled with the nagging problem of ammunition availability. These were beautiful, strong, effective, accurate and well-engineered firearms that unfortunately lost their way in the marketplace. They are certainly impressive guns, though!
Dillon Leather by Mitch Rosen!

5JR-DL $75
A full-length belt slide that offers all-day comfort and superior concealment for an outside-the-pants belt holster.

Best-Quality Belt-DL $70
Simply the best GUN BELT you have ever owned. Full, double-thickness leather with solid brass buckle and hardware.

5.11 Tactical

Double Duty TDU® Trainer Operator

The Double Duty TDU® belt is metal-detector friendly and offers two color options. Both the Trainer and Operator belts feature 6,000-pound-test buckles and heavy, reinforced stitching, therefore can be quickly converted into secure tie downs, secondary carry straps or emergency harnesses. All 5.11 tactical belts are made of strong nylon webbing and provide a stable support for carrying firearms and accessories. According to 5.11 Tactical, belt sizes run small, so they recommend you order one size up for the best fit.

#### “Plan B” Very-Bad-Day Planner Holster
Dillon’s “Plan B” Very-Bad-Day Planner Holster holds a handgun and a spare magazine or pepper spray, yet it fits in with business clothing and won’t draw undue attention. It looks like a typical day planner, but inside there’s a holster that’s adaptable for either right- or left-hand draw. It fits most .380, 9mm, .40 and .45 caliber autos, including: Beretta, Colt, GLOCK, HK, Kahr, Kel-Tec, Ruger, Taurus, SIG, and Smith & Wesson. Will also hold small-frame revolvers with two- to four-inch barrels.

Blue Press
The Master Sight Pusher is a professional-grade tool that makes quick work of changing pistol sights while protecting both gun slides and the sights themselves. Heavy-duty, built to last and smartly designed to work on most any modern pistol sights. The oversized, ergonomic Easy Torque™ Handle partners with extra-fine drive threads to provide maximum torque with minimal effort when removing or installing sights. The Universal Press Block features multiple contact surfaces for almost any size and style of press-fit dovetail slots and sight profiles. Adjustable non-marring contact surfaces securely hold both 1911 and flat-bottom pistol slide styles.

ODIN Ready Bag

ODIN Works introduces the new ODIN Ready Bag® (ORB) featuring multiple pockets and pouches for mags, small gear, a clip for your keys, a water bladder pouch, and soft dividers inside to take down and pack your AR-15 while keeping parts safe and separated. For those builds with longer barrels, there is an extendable pouch at the top to ensure that any rifle will fit and be carried with ease. Whether you’re going to the range, out on a hunting trip, or just hiking through the woods, packing your gear has never been easier!

• Quick-release compression straps
• Four D-ring attachment points
• Key clip
• Loop and hook fasteners
• MOLLE fasteners
• Reinforced handles
• Two water-bottle pockets
• Ambidextrous shoulder strap
• Locking buckle
• Dividing panels that separate an AR upper and lower
• Water-bladder pouch and hole for hose
• Pocket extender: Can remain in bag as a pocket or extend up through the zipper to fit longer barrels
• Available in black or coyote brown
• Dimensions: 28” x 7” x 6”

Selecting Defensive Loads for .410 Shotguns

By Oleg Volk

In the popular lore, .410 bore shotguns are simultaneously over- and under-estimated. On one hand, .410 is considered suitable for nothing better than small game, on the other the muzzle-energy numbers for slugs appear to equal the famous .357 Magnum revolver. The truth is that the small-gauge shotgun can be a competent defensive chambering so long as the ammunition is selected very carefully.

Available in every possible action, from break-open to semiauto, .410 shotguns are generally meant for hunting. As such, they carry anywhere from one to three shots. Purpose-made defensive smallbores, like Mossberg HS410 and 500 Persuader hold four 3” or five 2.5” shells in the tube, while Russian-made Izmash Saiga comes with four- and 10-shot box magazines. Rossi’s Circuit Judge revolver shotgun holds five but is not recommended due to the difficulty of simultaneous extraction of five long, skinny hulls from the cylinder. Turkish-made AR .410 uppers imported by ATI use five-shot box magazines, but the chambering is limited to 2.5” shells.

The common complaint that .410 patterns aren’t very dense is true only for fast-moving targets. The long shot column crosses the path of the clay over a longer time than the shorter stacks from larger bores, but that’s irrelevant for the slower bipedal threats humans usually face. Shot loads fired from small bores are about as effective as 12-gauge loads of similar velocity – in a pellet-per-pellet comparison. At the same velocity, however, .410 carries only a third as many projectiles as 12-gauge.

We can disregard shot sizes smaller than #4 buck from the start: the pellets simply lack penetration required to reach vital organs. With most .410 shotshells carrying unbuffered shot, the internal deformation of the projectiles further robs them of penetration and pattern uniformity. In brief, the criteria for ammunition selection are “sectional density” and “consistency.”

You would think that Foster slugs in boxes clearly marked with pictograms of deer would be just the ticket for stopping humanoids, but gel testing indicates otherwise. At ranges typical of defensive shootings, the little 1/4 to 1/5-oz. lead caps propelled at 1750 to 1850 fps just shatter on impact, fragmenting inside of two inches and penetrating in chunks to inadequate 5 to 8 inches. That’s true of Remington, Winchester and Federal slugs, as well as of Barnaul. Turkish-made ATI slugs perform decently about half the time, expanding to about .45 caliber and penetrating 12 inches, but fragment and underpenetrate on the rest of the shots. Brenneke to the rescue, with heavier 1/3-oz. solids backed with attached wads. Loaded by Brenneke and RWS, these expand to about 0.45”, penetrating to 16-18 inches, usually enough for through-and-through wounds but without much residual velocity. This performance is a very close match for soft-point .30 Carbine ammunition, lagging slightly in energy but more efficient due to the larger initial diameter.

In buckshot, I expected that the 5-pellet 00 buck S&B load would edge out 3-pellet 000 Winchester, but the massive deformation of the soft unplated pellets gave the Czech ammo very erratic patterns. Federal also offers a 5-pellet load with harder-plated projectiles: it produces more regular patterns and better penetration. Inexpensive Aguila 4-pellet 00 buck loads performed very well also, producing tight patterns out to 15 yards, penetration for all these falls in the 17- to 22-inch range with no individual pellet expansion. Three to five simultaneous 0.32-0.36” holes usually suffice to give pause to violent criminal actors.

The marginal energy envelope of .410 invites creative solutions. Hornady makes a slug and buck load with a hollow point FTX projectile followed by a pair of roundballs. The load has sufficient penetration and expansion to work well for defense up close. The combined weight of 245 grains also drops velocity into solidly subsonic 750-fps range, producing lower report. The lack of wadding between the bullet and the first pellet damages both, reducing accuracy too much for medium-range use. The same issue holds for Winchester Defender PDX1, a load stacking three plated disks and a dozen BBs following. The load has good penetration up close but shows erratic patterns further out. Both loads should be fine at five yards, less than ideal at 10.

All these recommendations hold for full-length shotgun barrels. Fired from much shorter .45 Colt revolvers, shotshells usually lose too much velocity. Even shallow rifling spins off-center pellets far off-track. With a Taurus Judge or a S&W Governor, 00 or 000 buck is a usable choice, but a conventional .45 Colt JHP would be superior in accuracy and terminal performance. People who load shot and rely on the extra-wide dispersal for a hit ought to remember that errant projectiles will eventually hit something – or someone – downrange.
The SnapSafe® Modular Vaults LOCKBOX is a pry-resistant 16 gauge steel container that provides secure storage for hand-guns and other valuables. Meets TSA airline firearm guidelines. Dimensions: 9.5” x 6.5” x 1.75”.

**P82-01044  $24.99**

The HYSKORE Six Gun Modular Pistol Rack is constructed from closed-cell, non-reactive foam that will not absorb moisture or react with lubricants or solvents. It has a soft, suede-like finish, but is rigid enough to offer firm support. The rack will hold six pistols with either single-stack or double-stack magazines, and can be disassembled and reconfigured to hold guns with wider or narrower grips. The modular feature of the rack also means that two or more racks can be connected together and reconfigured not only to give each gun its own “special home,” but also to take maximum advantage of all available space in your safe or vault. This is easy to do using 3/16” threaded rod, washers, and hex nuts available from any home-improvement store. The rack measures 11-1/4” wide x 7-1/2” deep x 6” high.

**P82-10208  $19.99**

These 532 gram DESI®PAK desiccants absorb moisture better than silica gel. It’s an industrial grade material that exceeds the requirements of Mil Spec MIL-D-3464E. Now available in smaller packages for other applications (ammo cans, long-term storage containers, etc.).

**P82-21435  $16.99**

DESIPAK (2 bags, 1 card)
4-ounce bag $4.99
2-ounce bag $2.99
Humidity Indicator Card, (6 ea.) $4.99

Protect your valuables against rust and corrosion. When the moisture control crystals turn pink, recharge unit by placing it in the oven. Unlimited recharges ensure a lifetime of use.

**P82-66702  $19.99**

**P82-66701  $19.99**
Designed to fit AK-47-style rifles chambered in 7.62x39, these KCI USA magazines provide reliability and smooth feeding. Constructed of steel with an electroplated finish, these magazines will withstand the toughest corrosive environments. A high-tensile compression spring, anti-tilt follower and reinforced feed lips provide reliable feeding and long life. A ribbed exterior and a prominent dorsal spine provide a positive grip for precise manipulations.

**AK-47-Style 20-Rd. Mag.**
P82-29832 $9.99

Like all KCI USA magazines, these standard capacity 30-round M1 Carbine magazines are constructed of steel with an electroplated finish. A high-tensile compression spring and a bolt-hold-open follower provide reliable feeding and long life. Removable steel baseplates allow for easy maintenance.

**.30 M1 Carbine 30-Rd. Mag.**
P82-29833 $19.99

KCI USA invests in high-tech quality control. All-steel construction and a curved mag bodies provide reliable feeding of all 30 rounds. The KCI 30-round H&K magazine works with H&K MP5 pattern firearms including the MP5k, SP89, SP5K Zenith, MKE, Omega, POF, HK Contract MP5 variants, SW5, BW5, CA94, D54, V94, clones, and AR builds. KCI USA uses their magazines – a lot. Located in Las Vegas, Nevada, they provide magazines to the biggest machine gun rental ranges in the world.

The direct-impingement gas operating system, unregulated gas block, and an opening in the back of the AR15/M16 receiver add up to a gassy suppressed experience.
By Oleg Volk

When sound suppressors became available in the early 1900s, most of the long guns available had manually reloaded actions. A few long-recoil semiautos posed no issue when suppressed because the pressure in the bore dropped by the time the action unlocked. As the variety of actions increased along with the variety of mechanism layouts, a number of technical problems popped up.

Simple blowback rifles relying on the breechblock inertia work pretty well, but the extra backpressure from the suppressor combined with use of heavier bullets can cause premature opening of the action. With rimfire, that's usually solved by going with slower, less energetic ammunition. For example, a carbine that has a considerable ejection port pop with supersonic ammunition might not have it with lower pressure standard velocity. With larger calibers, the main solution is adding weight to the bolt.

The little VZ61 machine pistol is a typical example of an overpressured blowback firearm: with nothing between the back of the breechface and the shooter's forehead, it sends gas and powder flakes to the rear in enough volume to make shooting it unpleasant. An optic mounted just behind the ejection port would intercept the ejecta, but the front lens would have to be cleaned every couple of magazines. The same issue occurs with the Stribog A2, only the ejecta comes out of the side. It's a minor issue for right-handed shooters but a problem for lefties. A3 variant of Stribog uses roller-

Selecting Autoloading Rifles for Suppressed Use
delayed blowback to solve that issue. Colt 9mm blowback carbines use a wide ejection port “splashguard” to keep the gas and the crud from reaching the user. Kel-Tec solved the issue by offering a heavier brass bolt for the Sub2000 carbine: that delays the ejection just long enough to drop the pressure to safe levels.

Short recoil blowback P90 and its civilian PS90 variant have the barrel recoil with the bolt for a small fraction of the overall bolt travel. Combined with bottom ejection, that proved sufficient to keep the user comfortable during suppressed firing, while also reducing felt recoil and shot dispersion.

The classic MP5 with its roller-delayed blowback is available in the already tuned integrally suppressed form. The regular MP5 with a muzzle suppressor still opens the action with the gas pressure high enough to flood the entire gun and even its magazine. Fortunately for the shooter, there’s no direct path from the breech to the face, so the overall gas retention only becomes an issue with a high volume of fire.

CMMG Guard and Banshee use radially delayed blowback action, with the angled bolt lugs slipping off the barrel lugs once the pressure drops, a variation on the Thompson Blish lock theme. The extra backpressure caused by the suppressor opens the bolt much too early, so CMMG offers add-on bolt weights up to 100 grams (3.5oz). Combined with a heavy carbine weight buffer, that is enough to keep the weapon closed until the residual pressure drops to safe levels.

Locked-breech rifles are generally more flexible when it comes to suppressed use. However, the most common AR15 is, in its base form, very poorly suited for silencing. That stems both from the direct-impingement design that sends gas directly into the receiver, and from the charging handle slot placed in the back directly in front of the shooter’s eyes. Combined with non-adjustable gas block, this results in a significant amount of powder fumes from the over-pressured breech and from the gas tube being present in the receiver after each shot: much of that exits through the ejection port, but enough puffs around the charging handle slot and makes the shooter’s eyes water unless goggles are worn.

An adjustable gas block ameliorates the problem but slightly. Piston uppers help some, but not enough, as some gas still comes from the breechface. Gas Buster and other specialized charging handles merely deflect the gas slightly. Simplistic Shooting Solutions gas vent forward assist replacement provides an alternate path for the fumes. The removal of the opening in the rear of the receiver does the most good, but gas then comes out around the left-side charging handle and hits the left eye instead of the right. JP Enterprises solved the problem with their LPR07 and SCR11 rifles: adjustable gas block combined with a floating cover over the left-side charging handle slot eliminate felt blowback completely despite the direct-impingement mechanism.

Remington ACR, FN SCAR and SIG 556 combine side charging and adjustable gas with short stroke piston design and so keep the fumes away from the shooter. M+M 10x and Faxon ARAK21 do the same with a long-stroke design, making for an even less gassy experience. The slower-opening action lets the pressure drop more, so even the absence of the charging handle slot cover doesn’t cause any issues. Kel-Tec SU16, using a non-adjustable short-stroke gas system requires a different piston head for suppressed use: without it, the rifle gets massively over-gassed, causing the bolt carrier to bounce off the back of the receiver. That makes for accelerated wear on the gun, and often
makes the breechface skip over the top cartridge in the magazine. With the proper piston part, SU16 suppresses well, runs reliably, and is pleasant to shoot.

Bullpups can pose additional challenges. Generally prone to quicker overheating, they become even warmer when suppressed. However, suppression becomes even more important due to the closer proximity of the muzzle to the shooter’s face. Some rifles, like Steyr AUG, have the ejection port much too close to the eyes. Others, FN FS2000 and Keltec RFB, eject to the front. They, along with the bottom-ejecting Kel-Tec RDB, minimize the amount of blowback to the user. The two Kel-Tec bullpups also feature adjustable gas regulators, so they can be tuned for efficiency.

The long-stroke piston mechanism and the mostly enclosed receiver help the suppressed AK47, though over-gassed by design. Suppressed AK dumps a lot of fumes into the receiver but only some of that comes out towards the shooter. Czech VZ58 also behaves itself despite the wide-open ejection port, but the lightweight rifle heats up even more rapidly with a can attached.

Sound suppressors also differ in terms of gas retention. OSS baffle-less designs behave the best, greatly reducing backpressure. AmTac and other makers offer reflex suppressors in which the blast chamber extends behind the mounting point. The extra volume doesn’t make them quieter, but does reduce blowback considerably. While AmTac reflex suppressors help the rifle balance by moving some of the weight to the rear, titanium suppressors like the high-precision models from YHM and Thunderbeast Arms do it by minimizing the overall weight. A .338 Lapua Magnum suppressor from TBA weighs only 17oz, the same as a small bottle of water, but cuts the report by about 30db and felt recoil by 40 percent.

Blowback reduction isn’t the only consideration. Accuracy of some calibers, specifically 9x39 and .300 Blackout subsonic, appears very sensitive to the design of the suppressor. Longevity of the suppressor itself is also a factor: Inconel and steel win the durability contest over aluminum and titanium, but the barrel length and the volume of fire are the greatest contributing factors. Finally, while direct-thread designs tend to be more compact and simpler, QD mounts allow the use of muzzle brakes as sacrificial blast baffles, saving the wear on the regulated components.

In sum, the ideal suppressed autoloading rifle has no receiver openings near the shooter’s face and limits the amount of powder fumes introduced into the receiver from either the breech or the gas system. Locked-breech designs with adjustable gas regulators achieve that best for full-power cartridges. Side chargers improve on the AR rear T-handle, especially when properly sealed with gaskets or floating slot covers. Have fun – quietly!
The Specialized Dynamics AR-15 Emergency Repair Kit includes:
- three gas rings
- extractor spring
- firing pin retaining pin
- buffer retaining pin/spring
- hammer/trigger pin
- take down detent and spring.

- Gen 2 P82-18477 19.99

Young Manufacturing is the licensed manufacturer of the HMB bolt. The HMB Bolt by HM Defense eliminates the pass-through cam-pin hole and replaces it with a cam-pin socket and radiused cam-pin design. The new patented design eliminates the natural weak point of Mil-Spec bolts by significantly increasing the amount of metal (and strength) at the cam-pin location. The result: NO MORE BROKEN BOLTS! The HMB Bolt also reduces contact between cam pin and firing pin, enabling smoother operation of the firing pin, bolt lugs and aft gas rings. The new cam-pin socket also retains lubrication for extended operations. Comes with a phosphate cam pin.

HMB Bolt P82-66680 $99.99

Young Manufacturing’s Upper Receiver Vise holds any AR15 upper receiver regardless of the manufacturer. Since it supports the receiver from the inside, the outside dimensions are of no concern. Made from aircraft-grade 6061 T6 aluminum and anodized to MIL-A-8625 Type 3 Class 2.

YM Upper Receiver Vise P82-66679 $34.99

This tool makes it simple to remove or install a new ejector and spring into the AR-15 bolt. Anyone who has tried to do this without a tool will be amazed at the reduction in the number of cuss words needed to perform the task. Comes with alignment and roll pin punch.

YM Bolt Assembly Tool P82-66678 $39.99

A level reticle is critical to long-range accuracy. For longer shots a canted reticle will pull or push a bullet’s trajectory off of vertical center. It gets worse the more the distance increases. A level scope means that the reticle will be perfectly aligned with the rifle bore. Balancing small levels on a scope turret and gun receivers has been a commonly accepted practice for years. Not only is this a clumsy process, it’s wrong. The turret on most scopes is not perfectly aligned with the reticle, so even if your turret is level to the gun, your scope may not be. Level-Right PRO changes all that by simplifying scope alignment in four easy steps. Accurate and intuitive, this timesaving instrument quickly aligns the actual scope reticle to the horizontal gun plane, which is key to the long-range accuracy of your rifle. Level-Right PRO helps you quickly and confidently mount a scope for maximum accuracy.

Level-Right PRO P82-21777 $69.99

Real Avid Level-Right™ PRO

P82-12337  $24.99

Tuff Products 3 Gun Ammo Bags (Set of 3) are made of 1000 Denier Cordura® and equipped with dual 550 cord cinch strings for secure closure. The Red/Blue bags hold up to 200 loose pistol/rifle rounds and Black bag holds up to 200 loose shotgun rounds.

P82-15773  $19.99

Taylor Freelance Magazine Extensions

AR-15/Tavor 9mm SMG +10 (Pictured)  P82-12377  $39.99
This extension adds a full 10 rounds to your 32-round Colt SMG-type magazine. Works with many “stock” mag springs. NOTE: Colt SMG mags come from many different manufacturers. Colt offered at least two major types – one where the floorplate slides on from the front, and the other which slides on from the rear. TF extensions are built to work with BOTH the front-mount and rear-mount styles.

CZ Skorpion +10  P82-12378  $49.99
• Extra length/strength spring included
• Thumbscrew-and-gasket retention system allows for quick, easy disassembly.

SIG MPX +10  P82-12376  $29.99
• Works with stock mag spring.
• Angled floor stands the magazine straight up on a table for easier loading.

High Speed Gear® Polymer TACO® Mag Pouches

The bodies and brackets of High Speed Gear® Polymer TACO® magazine pouches are made with HSG’s durable and flexible proprietary polymer and are laced together with bungee cord for the same versatility customers have come to expect from the TACO® brand. The rifle pouches grip and retain a wide variety of magazine styles and calibers. The pistol pouches also grip and retain a wide variety of pistol magazine styles and calibers, as well as small tools like pocket knives, multitools and small flashlights.

Polymer Double Decker TACO  P82-44058  $46.99
Polymer Rifle TACO  P82-44056  32.99
Polymer Pistol TACO  P82-44057  25.99

The Master Bench Block™ is the most comprehensive AR15 bench block ever! It allows you to tap 13 critical pins from 5 different components. The block is wrapped in an over-molding that grips to your bench to prevent slippage.

**P82-29033** $34.99

This advanced kit includes every standard and roll pin punch needed to build or work on an AR15.

**P82-29032** $39.99

The unique Accu-Grip™ Picks and brushes get the job done, feel good in your hand, and won’t scratch your firearm. Eight profiles dig gunk out of the places that even the sun don’t shine. They’re tough on the crud but tender on the metal. A better designed, better built detailing kit that just might make your dentist jealous.

**P82-29039** $29.99

**P82-29036** $9.99

The AR15 Brush Combo™ contains the critical components you need to keep your AR15 chamber and bore carbon free. It contains a star chamber brush and star chamber mop for cleaning inside the hard to reach star chamber. Star chamber pads help collect left-over carbon while applying the perfect amount of oil or solvent. The .223/.556mm bore brush scrubs baked on carbon from lands and grooves.

**P82-29037** $9.99

**P82-29038** $12.99

**Carbon Boss™ – AR15.** This is the most comprehensive carbon removal multi-tool ever built. Extremely versatile, it has 12 precision surfaces to clean the most critical parts of your bolt, bolt carrier, cam pin, and firing pin. It’s the enemy of your AR15’s worst enemy.

**P82-29039** $29.99

Installing a pivot pin is a small step that can quickly become a giant pain in the neck. Meet the AR15 Pivot Pin Tool – the one tool guaranteed to take the nail biting, pin-launching task of installing a pivot pin and turn it into something you might actually look forward to. Align the guide, insert the spring and detent pin, slide the pivot pin into place. Click. Snap. Done.

**P82-29034** $9.99

The AR15 Brush Combo™ contains the critical components you need to keep your AR15 chamber and bore carbon free. It contains a star chamber brush and star chamber mop for cleaning inside the hard to reach star chamber. Star chamber pads help collect left-over carbon while applying the perfect amount of oil or solvent. The .223/.556mm bore brush scrubs baked on carbon from lands and grooves.

**P82-29037** $9.99

**There’s no easy way to scrape carbon out of the star chamber of an AR15 unless you’re a surgeon.** That’s why you use a star chamber brush to loosen the carbon then remove it with these star chamber cleaning pads. Done deal. Now get back to shooting. 20 wool chamber pads per package.

**P82-29038** $12.99
Real Avid
Smart TORQ™

The most precise and technically advanced torque driver for guns.
Specifically developed for scopes mounting and gun builds. Discrete inch-pound-increment settings provide spot-on torque adjustments. Comfortable ergonomic grip with Force Assist makes tool manipulation a breeze. The functionally intuitive torque setting with visual, tactile and audible feedback provides confident assurance. To get you started, Smart Torq comes with 12 of the most commonly used gun bits. Never overtorque a scope ring again!
P82-21776 $79.99

Swab-its
A Swab for Every Job!

No sh*t, there I was...in my office, cleaning my revolver when the boss walks in with that “whiskey-tango-foxtrot” look on his face. “Hi,” I said (thinking fast), “I’m trying out these Bore-tips before I write the Blue Press copy for them. They work GREAT!” The Bore-tips Swabs REALLY DO work. What you can’t see under the foam is a plastic jag sized for a tight bore fit which provides for the uniform application of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reusable.

.22/5.56mm (6 ea.) P82-15310 $4.98
.243/6mm (6 ea.) P82-15311 4.98
.307/6.2mm (6 ea.) P82-15312 4.98
.357/9mm (6 ea.) P82-15313 4.98
.40/10mm (5 ea.) P82-15314 4.98
.45 Caliber (5 ea.) P82-15315 4.98

Gun-tips® Extended Reach Firearm Cleaning Swabs by Swab-its® revolutionize the way you clean your gun. The foam tips are lint free, reusable and ideal for cleaning trigger assemblies, slide rails, springs, extractors and anywhere else space is tight. 24 per package.
P82-12583 $9.99

For more than 100 years, consumers have trusted Ballistol to lubricate, penetrate, clean, protect, and preserve their firearms, leather gear, wood, metal surfaces, and more. With an astonishingly wide range of applications, this environmentally friendly multi-purpose oil has become an essential tool for shooters, hunters, fishermen, and handymen all over the world.

1.5 oz. Aerosol Can P82-30147 $4.99
6 oz. Aerosol Can (pictured) P82-30145 9.99
16 fl. oz. Non-aerosol Can P82-30146 19.99

The HYSKORE Degreezer consists of a 12” x 6” x 4-1/2” polypropylene tray with an angled drainage surface and a well with a perforated basket for holding and draining small parts. The set also includes a standard double-end nylon gun-cleaning brush. Small parts and even complete trigger groups and bolt assemblies can be placed in the basket and the well filled with solvent to cover the parts and left to soak for extended periods. Then the basket can be withdrawn, draining all the parts. The set includes a cover with an integral holder for the brush. This means the solvent that has been contaminated by the cleaning process can be left in the well of the Degreezer (rather than returned to the bottle) with the cover in place so that it’s ready to be used for the next cleaning event. The tray, cover, and basket are made from polypropylene plastic. This has been proven to be impervious to all popular commercial cleaning solutions. It will also resist kerosene, acetone, and gasoline.

Blue Press 65
## Slip 2000 Products

725 Gun Cleaner Degreaser should truly be called Super Degreaser. This water-based cleaner will cut through the toughest cosmoline, carbon, grease and grime! Its super strength allows it to degum and degunk the dirtiest of gun parts when sprayed on or used in parts washers or solvent tanks! **NOTE:** To help prevent rusting, users must apply a gun lubricant immediately after cleaning to disperse any moisture in parts.

Slip 2000 Carbon Killer provides you with a safe, effective way to clean carbon, lead and plastic wad fouling. Unlike other gun cleaners, this product is non-flammable, non-hazardous and biodegradable. Designed for soaking metal parts with baked on carbon, Carbon Killer dissolves carbon and lead on contact. **NOTE:** Carbon Killer is for cleaning internal metal gun parts with baked on carbon by soaking them. It is an aggressive cleaner and should not be used to clean the outside of your gun. It can damage and even remove some finishes.

Slip 2000 EWL30 has the same properties as EWL, except it is a lot thicker. It contains a proprietary thickening agent that makes this lubricant consistency like a 30-weight motor oil. It was designed for those who want or need a lubricant that will not migrate at all and don’t want to use a thick grease.

Brian Enos’ Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it. Slide-Glide Standard is for use in warm weather (F60º+), Lite is a thinner viscosity for lower temperatures (F30º+).

The Hand-Sized Handgun Championship of the Known Universe

By Duane Thomas

Action Photography by Robin Taylor

The Hand-Sized Handgun Championship is a match held annually in Washington state under the auspices of Action Shooting International a.k.a. ASI (asi-usa.org). Every year, as match director Rick Breneman has put it, “I make the name bigger.” The first year, it was “The Hand-Sized Handgun Championship of the World.” Next year, it was “of the Solar System.” Then “of the Galaxy.” This year it was “The Hand-Sized Handgun Championship of the Known Universe.” I have no idea what they’re going to do next year, though I’m holding out for The Hand-Sized Handgun Championship of All Dimensions.

This is a match where competitors are limited in the size of the guns they can shoot to a barrel no more than 3-1/2” inches long if it’s an autopistol, 3” if it’s a revolver. Of course, this year we had exactly one person running a revolver. It’s pretty much accepted the largest, most-capable gun legal under Hand-Sized rules is the GLOCK 26. So Andrew concocted a GLOCK 26 with a tungsten guide rod, all the super-trick-this-gun-only-works-with-Federal-primers trigger system components, a Hogue HandALL grip sleeve (hogueinc.com), and a Trijicon SRO red dot sight (trijicon.com).

At the other end of the scale, we had people like me with my GLOCK 42 – though admittedly I ran it with the mag in the gun to start fitted with a Vickers Tactical/Tango Down +2 floorplate (tangodown.com) giving me a full three-finger grip which is what I’d do if I were actually carrying this as a compact belt gun – and match director Rick Breneman’s tiny SIG P938 9mm. Every stage began with six rounds loaded into the gun (assuming your gun could hold that many) and every spare magazine had to be loaded with six rounds.

Stages were set up to be fair to our one person running a revolver. Invariably they consisted of two posi-
tions, at each of which your best five shots counted. I have joked in the past the Hand-Sized Handgun Championship should be called the Headshot Handgun Championship. A very efficient way to set up a five-shot position is a two-target array with one target separated into two targets by putting a strip of tape in-between the body and the head. Make every body engagement require two shots, every headshot one. Thus, a two-target array, two shots to the body on one target, two shots to the body and one to the head on the other, five shots and you’re done. Well, assuming you hit what you’re aiming at and take no extra shots anyway.

Engagement distances were short, typically four to five yards. Rick commented, “With little short guns, I’m not saying you can’t make hits at longer range, because you can. But at a match like this, a lot of newer shooters, running little guns, I don’t think people are too interested in trying to make headshots at 15 yards. They’re more interested in hitting targets four or five yards away. And for the purposes of self-defense, that’s probably pretty realistic. I’m also not saying the Hand-Sized Handgun Championship is self-defense training. But there should be some relevance.”

In ASI, out of deference to people who might not be comfortable drawing a gun from a holster, you are generally allowed to begin each stage either from the draw or with the gun already in your hands, held at the Low Ready. I’m sorry but my testosterone level simply will not allow me to do anything other than start from the draw if I have any choice in the matter at all.

My favorite stage this year was the one set up with a moving target system from MGM Targets (mgmtargets.com). You began facing a two-target array of IDPA cardboard. 90-degrees to your left you have an activator paddle on the ground, then at about 10 yards to your left-front you have another IDPA target set up on a trolley. That target begins partially obscured by a no-shoot, after you hit the activator it begins moving, until it come about even with you, then at the end of the trolley it flops forward, you can’t shoot it anymore.

I draw, engage the first array, two to the body, two to the body, one to the head, I know I’ve got five good hits. I pivot left, reloading the gun as I go. Round still in the chamber, six-round mag, now I’ve got seven rounds in the gun. Hit the activator, the target starts moving. I figure, “No big deal, I can fire seven shots.” Here comes the target, and it is moving pretty darn zippy. I’m actually only able to get off five shots before it disappears. Fortunately, when the target is scored, I have three bullet holes in the down-zero circle and two just outside, so I only drop two points for the stage.

You can tell when a match is going well. Does everyone seem relaxed and happy, are people chatting and laughing, or does everyone seem stressed-out and pissed-off? Thus far I have shot all four Hand-Sized Handgun Championships, and they have all fallen into the “everyone is obviously having a good time” category.

My GLOCK 42 running Super Vel “Pocket Rocket,” for the second year is row was flawlessly reliable. Last year I came in 8th. This year I was 7th. That means in six years I should be winning this thing, right?

## Hartman Mfg Target Stands

Hartman Manufacturing’s Target Stand Adapters make it easy to use scrap 2”x4” lumber as long-range target stands. Simply attach the adapters to form two bases as shown, then clamp to uprights and a crosspiece to form a stable target stand.

## Shoot Out Targets

The Alpha Target is Shoot Out Targets’ Patent Pending instant-reaction target system that can be reused again and again to improve your marksmanship. All Shoot Out Targets are made of durable cardboard that has been tested to withstand 1000-plus shots. Unlike clay pigeons that can only be used once, the Foam Medallions are durable and able to self heal for longer-lasting use, allowing for up to 40-plus shots per medallion. Each foam medallion is 3” in diameter and 1/2” thick. With the easy-to-see foam medallions you will get an instant kinetic reaction with every hit. Shoot Out Targets are proudly made in the USA, reusable for hours of fun and can be used with all-caliber firearms and airguns. The target stands 43” tall and 22” wide when assembled.

Built for speed, these High Performance red dot sights will take your shooting ability to the next level. By using a single red dot as an aiming point, target acquisition is as simple as point and shoot. The unique Heads-Up-Display (HUD) design provides an unlimited field of view, while eliminating obstruction and tunnel vision common to tube-style scopes.

**Scout Scope Mounts**

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

- Scout Scope Mount for AK Rifle: P82-25374 $79.99
- Scout Scope Mount for SKS Rifle: P82-25373 78.99

**Duracell 123 Batteries**

- 3 Volt (Each): P82-16993 $6.99
**CED M2 Chronograph**

P82-17926     $199.99

The M2 Chronograph comes with sensors, screens and one two-foot mounting bracket. A nylon carrying case and tripod are available options. The CED7000 Shot Timer is a breakthrough in technology. No other timer to date offers this combination of advanced features, compact size and light weight. This is the “next generation” Shot Timer here today! Comes with a rechargeable battery with low-battery LCD indicator and a universal charger.

**CED7000 Timer**

P82-19208     $129.99

**Blue Press 75**
By Peter Caroline

In the Year of our Lord 2020, a plague was upon the house of New Mexico and the tables of the inns were laid bare. And the Shootists saw this and found it an abomination, and thus was Shootists Holiday 2020 declared null and void. And it was evening and it was morning, and a voice from above sayeth “Let there be a mini-Holiday in July at Gunsite in Arizona, where sanity prevaileth and the evil of the East abideth not.”

Driving from Green Valley, Arizona, to Gunsite, one can count on an eventful journey. This year was no exception. The traffic on I-10 up to Phoenix moved right along, and then suddenly came to a screeching halt. Somewhere up ahead, there was a major accident. Now in most rational jurisdictions, in case of a road blockage, Rule #1 is: Quickly clear the road to return to normal traffic flow. In Arizona, however, a host of public works vehicles and personnel must be deployed to set up traffic cones and warning signs to funnel five lanes of traffic into one creeping stop-and-go lane. The resulting jam was several miles long. Two hours later, I finally passed the scene of the wreck. Broken and tumbled cars and trucks were strewn all about, and crews were taking photographs and measuring distances and, almost as an afterthought, removing bits and pieces of debris.

Once free of the Phoenix area, the ride to the Chino Valley Days Inn took about two hours. I checked in and noticed a sign in the dining area announcing that their previously generous complimentary breakfast had fallen victim to the Current Nuisance. No more waffles, scrambled eggs, bacon or sausages. Packaged pastries, oranges and coffee were available for takeout, however. Sic transit. I drove up the road to Safeway and picked up an assortment of meals and snacks to fill the refrigerator in my room.

Later, I drove up to Rob Leahy’s Simply Rugged Holster headquarters for a welcoming get-together and dinner and adult beverages. There were approximately a dozen guests…writers, industry executives, instructors, and retired law enforcement types. In such gatherings, I simply shut up and listen…it’s a free education.

The next morning at 0730 hours, I arrived at the Gunsite campus. Our group filled out releases and made our catered lunch choices for the 3-day event. We each received an aluminum water bottle with a Gunsite logo, a Gunsite pen and a small, spiral-bound book containing the Declaration of Independence and the U.S. Constitution and Amendments. There are many shooting schools, but Gunsite is unique: founded by Lt. Colonel Jeff Cooper in 1976 as the American Pistol Institute, it is the oldest continually operating shooting school in the world. It does not teach competitive shooting; it is a fighting school. Everyone, instructors and students alike, walks around with holstered loaded handguns, and it is the safest place on the planet.

We began with a lecture on mental condition...how to command your environment. The vast majority of supposedly sentient hominids walk or drive around in what Col. Cooper described as “Condition White”... blissfully unaware of their surroundings. Gunsite students are trained to operate in Condition Yellow, constantly checking for any suspicious or potentially threatening situations or individuals. If some anomaly is spotted, one goes into Condition Orange, a state of heightened awareness and preparation for immediate action. When and if the proverbial material hits the fan, Condition Red takes place, and one takes appropriate measures. Getting this system firmly ingrained takes some practice, but is enormously empowering, and could save your life in these uncertain times.

Gunsite is quite insistent that its students follow to the letter the Four Rules of Firearms Safety:

- All guns are always loaded.
- Never let the muzzle cover anything that you are not willing to destroy.
- Keep your finger off the trigger until your sights are on the target.
- Always be sure of your target and what is beyond it.

After class, we’re off to the range to learn the basics of good handgun practice, starting with the presentation of the pistol, i.e., how to safely, quickly and efficiently extract the pistol from the holster and get it off safety and on target. We repeat this exercise until everyone is familiar and comfortable with the drill. We shoot our pistols at Gunsite’s challenging silhouette targets, which are printed in a deliberately confusing brown and tan camo pattern. We try to maintain tight headshots at 3, 5 and 7 yards... not as easy as one might think! Using my everyday carry gun, a Ruger SR1911 Lightweight Commander .45 with an ambidex-
trous safety, I managed to keep all shots, save one, in the kill area. Because my right knee and/or hip joints are somewhat deteriorated, I use a cane in my left hand, which happens to be my shooting hand. When I’m shooting, I stick the crook of the cane in my left rear pocket, and proceed with the exercise. It looks odd, but it seems to work (more on that later).

After lunch, we practiced magazine drills...speed reloads, where you simply dump the empty on the ground and slap in a fully loaded one, and tactical reloads, which involve more sleight of hand, retaining the empty or partially depleted mag in your off hand while grabbing the full mag in the same hand and inserting it in the gun. It takes some practice, as you can imagine. Some of us who had done this before went over to the Urban Scrambler range to shoot around and through assorted obstacles, in awkward positions. I actually managed to do fairly well on those positions where I could stand or crouch, except for the hostage target, where I successfully shot the hostage taker from a deep crouch, but then managed to fall on my ass while attempting to get upright.

That evening, the whole group went to dinner at El Charro del Norte, a large hacienda-style restaurant at the end of a convoluted series of rural streets (it should be called “El Escondido”). The food was wonderful, and generously portioned, the place was crowded, indoors and out, and our waitress was a blur of perpetual motion. A most impressive performance. We finished the evening with drinks on the Days Inn outdoor patio.

The next day, was rifle/carbine day. We did a number of drills involving the use of the sling, both for carrying and shooting. When selecting a long arm for this exercise, my primary criterion was weight, so I chose my Skinner Model 92 lever-action .44 carbine, which was equipped with a ghost ring rear sight and fiber front sight. It was already sighted in at “minute of pig,” and had proven itself in the field. Well, I was wrong. Everyone else had some version of a bolt-action scout rifle or an AR variation, all scoped. I did all right on the close-up exercises, but beyond 25 yards, target accuracy was an impossible dream.

After lunch, more carbine practice and, after that, some classroom work on the Combat Mindset, which is a good thing because, under any circumstances, pleasant outcomes are never guaranteed.

At 5:00 p.m., we were treated to a buffet dinner...barbecued beef and pork, along with a baked potato, beans, coleslaw, rolls and some excellent dark beer from Alaska. Afterwards, one of our instructors showed off some interesting “Fitzed” Colts he had acquired, and then we participated in a charity auction and raised more than $3,000. Once again, the party ended up at the Days Inn patio, with some very nice bourbon and industry anecdotes until 2245 hours.

The next morning, I arrived at Gunsite, somewhat the worse for wear, at 0730. We all had our temperatures taken with some “radar gun” thing. Everyone passed. We drove out to the Hanneken Range for an annual ceremony in which we salute those Shootists who have passed in the previous year. I was one of six participants chosen the salute. We each chose a .44 Special revolver for the ceremony, and we fired three rounds for each of our departed members. Very moving ceremony.

On a lighter note, the next stop was the Fun House. Unlike the usual TV depiction of a screaming armored horde smashing down doors and throwing flashbangs, this is a slow, methodical one-man (plus instructor) house clearing operation, with pistol at low ready. Before I entered the Fun House, I left my cane at the door....no need for extra impedimenta, and I planned to move slowly anyway. I threw open the first inner door and stepped back to assess the situation. As I entered the room, I spotted a life-size, full color rendering of a woman holding out an ice cream cone in her right hand. Her left hand was resting on a closed shoulder bag. I did not shoot. In a real-life situation, if she had made a move to open the bag, I'd have plenty of time to shoot. I went through the remaining rooms, which were all “shoot” situations, and successfully dispatched the offending images, except for one where I shot the perp’s gun hand and put one round through his jaw. Sloppy.

Our shooting activities ended with an outdoor bush-hunting scenario where rectangular steel targets were placed at approximately 60- to 200-yard distances. I passed on that one and took pictures.

We ended the day’s activities with a visit to the Sconce. This structure was designed and built by Jeff Cooper as an impregnable fortress as well as a comfortable home. The long corridor to the Coopers’ bedroom was secured by a remote-controlled wrought iron gate. A spiral staircase led up to a watchtower, with a commanding view of the surrounding countryside. The stairway also led down to a huge library and archives and a separate gun vault, containing a wealth of treasures including custom-built Bren Ten pistols and many early iterations of the Colonel’s Scout Rifle project. It was a memorable experience; not only as an impressive home and fortress, but also as a shrine to the memory of Jeff and Janelle Cooper, and it is lovingly maintained as such.

In contrast to my initial drive up to Chino Valley, the return 230-mile trip was a breeze. I started out at 0815 hours and arrived at my driveway at exactly noon. Good friends, good guns and good times...what more could one ask?
Like pretty much everything from Berry's Manufacturing, this 9” x 12” x 10” deep stackable utility box is made in America and covered by a lifetime warranty. This one happens to be filled with once-fired, processed (polished, sized, deprimed, primer pockets swaged) 9mm cartridge cases (sold separately when available) prepared at Dillon Precision on our new CP 2000 Case-Processing Machine. The box is designed to stack and is great for storing bulky items. If your gun room/garage looks anything like ours, these will help you get organized. So, whether you’re looking to store shooting accessories, ammo components, or car parts (we have more than our share of all of the above) these boxes are ideal. The best part is that they’re transparent, so when you fill them, you don’t have to open the WHOLE stack to find what you’re looking for.

Stackable Utility Box P82-40194 $13.99

Berry's Powder Funnel Set provides a wide range of flexibility when it comes to reloading. The two-funnel set comes with inserts that allow loading calibers from .17 to .50 caliber. Constructed of tough translucent polycarbonate material, they are covered by a lifetime warranty and made in the USA.

Powder Funnel Set P82-40191 $6.99

AMMOCOBBRE, LLC

The AmmoBrass Swage Setter is for use with any swaging devices such as Dillon’s Super Swage 600, Dillon 1050/1100 presses, and almost any other swaging device to assist you in properly setting your swage rod and swage back-up die.

Swage Setter, 3-pc. Set P82-40187 $36.00
9mm Swage Setter P82-40188 12.00
.223/.300 Blk. Swage Setter P82-40189 12.00
.308/.30-06 Swage Setter P82-40190 12.00

Berry's Pistol Cases are as tough as they look. Available in a desert tan color, they’re injection molded out of high-impact polypropylene and contain high-density crate foam to provide a soft, protected bed for your firearm investment. They’re TSA approved when appropriate locks are added. Available as a single-pistol or double-pistol case, they carry a lifetime warranty and are made in the USA.

Single-Pistol Case P82-40192 $9.99
Double-Pistol Case P82-40193 15.99

From clearing brush to making kindling, the Camp 10 is the ideal outdoor and survival tool. Cut, slash, hack, split, scrape – just about any task you ask of it, the Camp 10 can handle. The full-tang Camp 10 is made of carbon tool steel for toughness and wear resistance. A basic black powdercoat protects the steel and makes maintenance easier. You’ll like the secure, contoured grip of the Camp 10, too. The handle has a built-in hand guard and is drilled in both front and rear so you can attach a lanyard either place – or both – for carrying versatility.

Blade length: 10"  Overall Length 16"  Weight, with Sheath 1 lb. 8 oz.

P82-55012  $80.99

Key chains just got even handier with the new Kershaw PT-2 key chain tool. It offers eight handy functions in a very compact space. The PT-2 (Pry Tool-2) comes in at less than an ounce as well and offers a bottle opener and cap lifter, a pry bar, two screwdriver tips, a wire scraper, and three sizes of hex drives.

Overall Length 3.25"  Weight 0.8 oz.

P82-55013  $11.99

This “XL” Kershaw-Emerson now comes with D2 blade steel. D2, a high-carbon, high-chromium tool steel, is a knifemaker favorite and offers good edge retention and hardness, as well as being more corrosion resistant than other high-carbon steels.

Blade length: 3.9”  Closed: 5”  Open: 9”

P82-11689  $74.99

Kershaw Volt II opens one-handed and with an authoritative "twack" thanks to Kershaw’s SpeedSafe® assisted opening system. A simple pull back on the flipper and the Volt II opens smoothly and easily.

Blade length: 3.25"  Closed: 3.9”  Open: 7.1”

P82-66698  $55.99

The Original GLOCK® Field Knife
